TrueScreen

Methodology and probative value

This report was generated through **TrueScreen**, the patented Data Authenticity platform designed to acquire and ce content while ensuring its integrity, authenticity, and full legal value at an international level.

The process complies with globally recognized digital forensics standards, with **eIDAS regulations**, and with **GDPR pr** ensuring a level of reliability suitable for judicial and technical contexts across international jurisdictions.

TrueScreen applies forensic methodologies accredited worldwide, ensuring that every piece of content is acquired v possibility of alteration.

The entire operational workflow follows the most relevant international standards (including **ISO/IEC 27037**, **ISO/IEC** the recommendations of the **Budapest Convention**) guaranteeing a traceable, verifiable chain of custody suitable fo evidentiary use.

At the end of the acquisition process, each file is sealed using a **Digital Seal and Timestamp**, issued by an internatio **Qualified Trust Service Provider (QTSP)**.

This procedure provides a legal presumption of integrity and authenticity, making the content suitable for use in aud verifications, and judicial proceedings across borders.

The use of cryptographic hashing algorithms ensures that any subsequent modification becomes immediately detec preserving the evidentiary robustness of the certified material.

The certified process produces a **ZIP package** designed to guarantee maximum transparency, interoperability, and t legal verifiability.

The package contains:

- **The original files**, exactly as acquired and without any alteration to their original data or metadata.
- **A PDF** containing data, metadata, and operational logs of the acquisition and certification process, optimizec consultation, sharing, and document compliance.
- **A JSON file**, containing the same data, metadata, and characteristics as the PDF, intended for automated inte

information systems and digital workflows.

- **An XML file** containing the QTSP certification, including the electronic seal and qualified timestamp.
