Certification process overview

Article • 09/19/2023

Why get certified?

Earning a Microsoft Certification is globally recognized evidence of real world skills. A Microsoft Certification showcases your commitment to keeping pace with rapidly changing technology and positions you for increased skills, efficiency, and earning potential in your professional roles.

- Thirty-five percent of technical professionals say getting certified led to increased income and twenty-six percent reported promotions[1]. IT professionals who achieve a relevant, role-based technical certification perform an average of twenty-six percent better than their uncertified colleagues[2].
- Team leaders who support and encourage their teams to get certified can expect a higher performing workforce. Workers are more likely to stay with a company that invests in their skills through certifications[3].
- Getting a Microsoft Certification is also a great way to break into the tech industry. A Microsoft Certification conveys expertise, especially helpful for someone new to the industry.

Getting started with Microsoft Certification

A great place to begin is the certifications overview, where you can explore certifications by role or level. If you already know which certification you want to take, you can filter and search from the browse certifications page.

Click the name of any certification to see the certification details page which lists the exams you must pass to earn it. Some certifications only require one exam, while others require more. On the details page, you'll also find information about what skills are measured, how to prepare, and links to registration. Each exam also has its own details page covering exam-specifics.

Prepare for your certification exam(s)

For role-based, specialty, and fundamentals certifications, start by reviewing the study guide on the exam details page. For MOS certifications, start by reviewing the skills list on the exam details page. If you already have the skills, schedule the exam. If you'd like more preparation, check out the certification or exam detail pages for options like:

- Exam prep videos
- Free online training on Training Services Partner
- Instructor-led training
- Practice Assessments
- Additional preparation materials from Training Services Partner Press and training delivered by Training Services Partners
- Exam sandbox

To learn more about these and other ways to get prepared, visit: Prepare for an exam.

Register for a Microsoft Certification exam

When you're ready, register from any exam details page. During the scheduling process, you'll choose to take the exam in a local test center or online. Local test centers provide a secure, exam-ready testing environment while online proctored exams offer flexible scheduling and the convenience of taking an exam from your home or office. Microsoft partners with multiple exam providers to deliver certification exams for different types of candidates. To learn more about these providers, how to register, and the benefits of online exams versus test centers, visit: Register and schedule an exam.

> **Tip**
>
> We're committed to ensuring that every person who's interested in taking Microsoft certifications can do so in a way that is fair and accurately reflects their skills and abilities. Visit Request accommodations to learn more about requesting accommodations.

Getting your exam results and certifications

For most exams, you'll be informed of your results within minutes. But it can take up to 24 hours for results to appear in your Learn profile's Certifications tab. For more information about exam results and how to access them, visit Exam scoring and score reports.

Please note: if you've taken a beta exam or scheduled your exam via Certiport, the exam provider for students and educators, timing of exam results may vary.

Share your success with badges

If you've passed all the exams to earn a certification, congratulations! Employers and colleagues will recognize your achievement when you share your badge on professional networks or embed it in your email signature or resume. It's your time to shine. You can view, download, and share your accomplishments as badges or certificates, or share a record of your success on your Microsoft transcript. For more information on transcripts, visit View and share transcripts.

Renewing your certification

Keep in mind that role-based and specialty certifications expire after one year. You can take free online renewal assessments six months before they expire to extend your certification for a year. For more information, visit: Renew your certification.

Request exam accommodations

Article • 09/19/2023

We've designed certification exam accommodations to support candidates while maintaining our high standards.

> **Important**
>
> **Request accommodations before you schedule an exam.**
> It can take up to 20 days to process and schedule an accommodation request (online or in person). Be sure to plan ahead so we can ensure a positive exam experience.

What types of accommodations are considered?

We often approve accommodations for:

- extra time for learning disabilities, ADHD, PTSD, or test anxiety
- use of assistive technology
- a personal care assistant, reader, and/or scribe to be present during the exam
- limited ability to rearrange your home test environment to meet security standards

To see a detailed description of all accommodations and documentation requirements, visit: Available exam accommodations and documentation requirements.

How to request exam accommodations

Be sure to request and confirm accommodations before scheduling your exam.

To request accommodations through Pearson VUE:

1. Review the list of available exam accommodations and documentation requirements.
2. Visit Pearson VUE's Reasonable Adjustments Request System.

    - If you're a first-time user, click *New User Registration* and follow the steps to create your account.
    - You will receive an activation email (click once on the link in the email).
    - Log into the system and click the "*Start a new request here*" button.

- Provide the information requested at each step.
- Upload any supporting documents, if required.
- Click the "*Submit*" button.

3. You will receive an email confirming your request.
4. It may take up to **10 business days** for disability experts to review your request. You will receive an email when the review is complete informing you of the decision.
5. If your request is approved, **the email will include instructions for scheduling your exam with accommodations**.

If you have any questions about the process, please contact the Pearson VUE accommodations team to learn more.

If you've contacted Pearson VUE but need additional assistance with accommodations, please contact the Microsoft Exam Accommodations Support team.

Explore the exam sandbox

Not sure what to expect on the exam? **If you use assistive devices or keyboard shortcuts**, the exam sandbox will help you understand how assistive devices can be used in the exam interface, as well as how the keyboard can be used to navigate through the exam. Go directly to the English exam sandbox, or learn more about the exam sandbox, and find links to localized language sandbox experiences, by visiting: Prepare for an exam.

Question types

To learn more about the different types of questions you may be asked, visit: Exam duration and exam experience.

Appeal an exam accommodation decision

You can always appeal if your accommodation is denied. To appeal a denial:

1. Click the *"Request an Appeal"* button on the bottom of Step 6 on your request in the Pearson VUE request system. This will place an appeal form in the *"My Forms"* section of the page.
2. Download and complete the appeal form and upload it into the *"My Documents"* section of Step 6.
3. Upload additional documents by selecting the *"Upload Additional Documents"* button in Step 6. If you provided documentation with your original request, the

decision letter will contain details on what information was missing. If you didn't provide documentation with the original request, consider doing so as part of your appeal.

4. Click the *"Submit"* button at the bottom of the page. Your appeal will be carefully reviewed by disability experts.

If you have any questions about the process, please contact the Pearson VUE accommodations team to learn more.

Available exam accommodations and associated documentation requirements

07/11/2025

Available accommodations

All accommodations listed below must be requested before scheduling your exam unless otherwise noted. Only requests for extra time and to have another adult present in the testing area require documentation to verify your need for that accommodation to ensure no unfair advantage is provided and to maintain the integrity of the assessment experience. It's a bit inconvenient, but we're committed to a fair and valid exam experience.

Expand table

Accommodation	Verification Documentation required for test center	Verification Documentation required for online proctoring	Why do you need to request this accommodation in advance?
Extra time	Yes	Yes	Adding extra time requires a reconfiguration of the exam. Note: Microsoft has added **5 minutes** to exam time for unscheduled breaks. You do not need to request an accommodation for this time to be added. Visit Unscheduled breaks on exams.
Reader and Reader/Recorder	Yes	Yes	**Extra time will be provided**. For test center deliveries, you'll test in a separate room. For online deliveries, the proctors need to know that another adult will be in the room.
Personal Care Assistant (PCA)	No	Yes	For test center deliveries, you'll test in a separate room. For online deliveries, the proctors need to know that another adult may enter the room.
Ability to read aloud	No	No	In test centers, this is a distraction to others, so you'll be given a separate room. For

Accommodation	Verification Documentation required for test center	Verification Documentation required for online proctoring	Why do you need to request this accommodation in advance?
			online deliveries, the proctors need to know you'll be reading aloud.
Moving during the exam, including fidgeting	No	N/A. No advance notice is required. For online deliveries, you may move around within your work area if your face stays in view of the camera and all prohibited items remain out of arm's reach. If you need to leave your work area or the view of the camera, initiate a break.	In test centers, this may be a distraction to others, so you'll test in a separate room.
Noise cancelling headphones with Bluetooth	No	No	Proctors will inspect the headphones to ensure Bluetooth has been disabled.
Screen Reader Software (i.e., Dragon Speak (STT), JAWS, or NVDA)	No	No	The exam must be configured to allow this software to run. At test centers, you'll be provided with a separate room. For online deliveries, the proctor must be aware that audio will occur during the exam. NOTE the availability of the screen reading software varies by modality: - **Test Centers:** JAWS may be available depending on the test center location. - **Online Exams:** JAWS, NVDA, ZoomText Reader, and Windows Narrator
Sign Language Interpreter	No	No	For test center deliveries, you'll test in a separate room if the sign language interpreter is needed during the exam. If they are only needed for the check-in and exit process, you may test in the primary testing area. For online deliveries, the

Accommodation	Verification Documentation required for test center	Verification Documentation required for online proctoring	Why do you need to request this accommodation in advance?
			proctors need to know that another adult may be in the room with you.
ZoomText (Screen Mag Only)	No	No	The exam must be configured to allow this software to run.
Wheelchair Accessible Test Center	No	N/A. No advance notice is required.	Not all test centers are wheelchair accessible.
Adjustable Workstation	No	N/A. No advance notice is required.	Not all test centers have adjustable workstations.
Sit/Stand	No	N/A. No advance notice is required.	Not all test centers have a sit/stand desk, and this requires a separate room.
Additional lighting	No	N/A. No advance notice is required.	At test centers, you may require a separate room.
Chewing gum	No	N/A. No advance notice is required.	In test centers, this is a distraction to others, so you'll test in a separate room.
Other	Yes	Yes	Anything not expected under typical exam conditions requires an accommodation so the proctor is aware something will be different, so others are not distracted, and to ensure any changes to the exam configuration are available during delivery.

Ways to verify your accommodation needs

For accommodations that require verification (extra time and having another adult in the testing area), please provide one (1) of the following forms of information when requesting accommodations. A formal diagnosis is not required to verify your need.

- **Proof of past accommodations, such as:**
  - Previous testing or training accommodations

    - Workplace accommodations related to the request

- **School/education related accommodation records, such as:**
    - Records showing participation in special education services (e.g., an Individualized Education Program (IEP), Section 504 plan, etc.)
    - Note from an educator or school administrator on school letterhead describing accommodations provided to you in school or that establishes your needs.

- **Proof of other accommodations, such as:**
    - Accommodations provided by government or public entities (e.g., access to public transportation for a physical disability)
    - Accommodations provided at a conference, convention, or similar event.

- **Letter from your manager, supervisor, teacher,** or similar who can confirm your need for the accommodation.
    - This form is optional and intended to assist with this type of request.

- **Professional evaluations, such as:**
    - Letter or written recommendation from your health professional (e.g., physician, therapist, mental health counselor, psychologist, naturopath, etc.) The optional WWL Healthcare Provider Form can be used as a template for your health care professional.
    - Results of psycho-educational or other professional evaluations
    - Evidence of treatment, such as a prescription.

- **Other documentation.**
    - If you have something not listed here that demonstrates your need for the requested accommodation, please provide it. It doesn't have to be a formal diagnosis or documentation. Our disability experts will let you know if they need additional information to reach a decision.

- **If you don't have any of the above,** please contact the Microsoft Exam Accommodations Support team for additional support verifying your need.

Available Assistive Technologies

The following AT is supported for OnVUE deliveries with approved accommodation:

- Dragon Professional Individual version 15 and later
- Fusion 2023 and later
- JAWS 2023 and later
- ZoomText Magnifier 2023 and later
- ZoomText Magnifier/Reader 2023 and later

- NVDA 2024 and later
- Windows Magnifier on Windows 10 and Windows 11
- Windows Narrator on Windows 10

  Note: Narrator is technically supported by Pearson, but presents security issues and currently does not provide a good user experience.
- Mac Zoom on MacOS 13 (Ventura), MacOS 14 (Sonoma), MacOS 15
- SuperNova 23.01 or later

The following AT is supported for Pearson VUE Test Centers with approved accommodation:

- Fusion 2023 and later
- JAWS 2023 and later
- ZoomText Magnifier 2023 and later

Allowed Items

For testing centers, some types of equipment, such as hearing aids and inhalers don't require pre-approval. It may be necessary for test center staff to inspect these items before you bring them into the testing room. For a full list, review Microsoft's Allowed Items List.

You don't need to request an accommodation for pets, service animals, or comfort animals to be present during online exams. However, **only service animals are permitted in test centers; comfort animals are not**. No advance notice is required.

You don't need to request an accommodation to have a beverage during an online proctored exam if it's in a transparent spill-proof container. However, beverages aren't allowed in most test centers (to avoid spills, damage, and distraction). Be sure to ask in advance.

You don't need to request an accommodation for most medical supplies unless they require a connection to a cell phone or other monitoring device. If they do, you will need to submit a request if a cell phone must be within view.

If you have any questions about the process, please contact the Pearson VUE accommodations team to learn more. If you've contacted Pearson VUE but need additional assistance with accommodations, please contact the Microsoft Exam Accommodations Support team.

English as a second language

If the exam is not available in your native language, use the English as a Second Language form to request additional time to read and answer the questions. If the exam is available in your native language, you may take the exam in a different language; however, you will not be given extra exam time to do so.

As part of the request process, you will need to attach a letter from an instructor or employer or complete this form that verifies English is your second language.

Frequently asked questions about exam accommodations

Article • 09/19/2023

If I have an accommodation for training that I took to prepare for the exam, do I need a separate one for the certification exam itself?

Yes. The exam experience is separate from the training experience, and different accommodations may be more appropriate in an exam setting. Microsoft is committed to ensuring a fair and valid evaluation of your skills during our exam. To do so, we may need to grant different accommodations that make more sense for an exam situation.

If I was previously provided an accommodation, do I have to go through the same process for my next exam?

Once we have your accommodation on file, approvals are valid indefinitely for permanent disabilities. You will not need to repeat the process unless you want to change your specific accommodations. If you have a temporary disability, you'll need to resubmit your request after one year.

If you received an accommodation from Pearson VUE prior to July 1, 2022, you will have to create a profile in the request system to ensure that Microsoft's policies are applied to your request.

Why do I need to provide documentation to obtain an accommodation?

Certain accommodations require documentation to ensure fair and consistent delivery. Because some accommodations could provide an unfair advantage to those who don't need them, we strive to create an equitable experience for all by verifying need.

We've expanded the list of documentation options that can be used to support your accommodation request and removed documentation requirements where no unfair advantage could be gained by providing the accommodation. You no longer need to provide medical documentation to receive an accommodation. Learn more about the types of acceptable documentation by visiting: Types of documentation accepted.

I would rather not disclose my condition to get the accommodation. Is that possible?

We do not request information about your condition. We simply need to know the accommodations you want.

For those accommodations that require documentation, medical documentation is no longer required. We have expanded the documentation options to include **any**

document that demonstrates your need, including those showing you received the accommodation in the past. We don't need to know what your condition is; we just need to know that a similar accommodation has been granted. The more we know about your specific needs, the more we can ensure you have what you need during the exam. Microsoft and our exam delivery providers are committed to privacy and data security and won't share information provided as part of the accommodations process.

Note: Many accommodations don't require documentation.

What are some behaviors that cause proctors to interrupt or revoke/cancel the exam?

Regardless of where you take your exam, you'll be monitored via video; in an online experience, this happens through a web camera. You must stay in view of the camera at all times. **Without an accommodation**, you will **not** be able to read the questions aloud. You may move your lips, mumble, fidget, move around, and look away from the monitor.

If any of these behaviors, however, appear suspicious, the proctor will warn you to stop the questionable behavior and may ask you to do another room scan if you're taking the exam online. If the behavior continues, the exam will be revoked.

One key difference between test center and online deliveries is that proctors have more control over what is brought into the testing area. With online deliveries, if unauthorized individuals enter your exam room, your exam will be cancelled or revoked. **Note:** If no other childcare options are available, children under the age of 13 may be present without requiring an accommodation.

If you need a reader/scribe or personal care attendant, that person may be present during your exam by requesting an accommodation.

If you still have questions about specific behaviors that might cause the proctor to interrupt or stop your exam, please contact the Microsoft Exam Accommodations Support team to learn more.

What if I have challenges with the check-in process for online exams?

You'll need to take and upload pictures from your phone and use your webcam to visually scan the exam area within a 15-minute window. Your desk and walls will need to be cleared of any prohibited items. Please request an accommodation prior to registering for the exam if you feel unable to accomplish these tasks within the allotted time or cannot rearrange your testing area to meet the "clean" room requirements.

I have an approved accommodation, but I need to reschedule. What do I do?

Use the same process you used to schedule the original appointment; contact the scheduling agent as noted in your original approval letter. They will work with you to reschedule the exam.

I am having trouble completing the request process and cannot proceed. Who can help?

If you encounter issues that you cannot resolve at any point during the process, please contact the Microsoft Exam Accommodations for additional assistance.

Register and schedule an exam

Article • 07/08/2024

How to register and schedule an exam

- Begin with the certification overview or browse all certifications page to find the exam you'd like to take, then click on the certification name.
- On the certification detail pages, scroll to "*Schedule exam*" and click on the exam provider button.
- Effective January 16, 2023, you can have a maximum of two Microsoft Certification exams scheduled at a time, either on the same day or on separate days through Pearson VUE. After you take (or cancel) one of these exams, you can register for another. Please note, there are no changes to exam scheduling through Certiport.
- You can schedule certification exams no more than 90 days in advance. For any additional questions on this policy, visit Pearson VUE customer service for test-takers .

How to choose an exam delivery provider

- In the "*Schedule exam*" section, you may see multiple exam provider options. If you're taking a certification on your own or as part of a training program, select "*Schedule with Pearson VUE*".
- If you're a student, member of an academic institution, or taking a Microsoft Office Specialist (MOS) exam, select "*Schedule with Certiport*".

Exam accommodations

- We're committed to ensuring that every person who's interested in taking Microsoft Certifications can do so in a way that's fair and accurately reflects their skills and abilities.
- If you have a disability and want to request accommodations during the exam, visit Request accommodations. Be sure to make accommodations requests **before** scheduling so the exam provider has time to review your request and make sure the testing environment supports your needs.

Online exam and test center options

In most cases, you can choose to take your exam online or at one of our local test centers.

> ⓘ Note
>
> If you don't see an online option, it's not available from your exam provider.

- **Test centers** are a great choice if you prefer a quiet, pre-configured environment without the worry of testing your computer and downloading software to meet Microsoft's security standards.
- **Online proctored exams** give you the freedom to take the exam almost anywhere, but you'll be responsible for making sure your computer and exam area meet security standards.

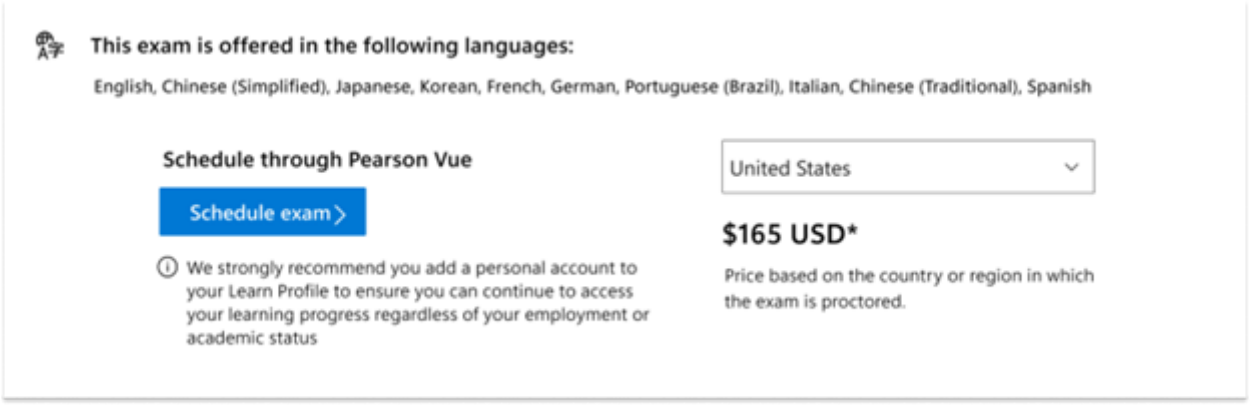
Run a system pre-check

- If you decide to take your exam online, you'll run a system pre-check to see if the computer you'll be using meets the requirements **before** registering.
- For detailed instructions on how to perform the system pre-check, visit: About online exams with Pearson VUE. (Certiport doesn't offer online proctored exams at this time.)

Step-by-step exam registration instructions

1. From any certifications or exam details page, click the button to schedule an exam with the appropriate exam delivery provider.

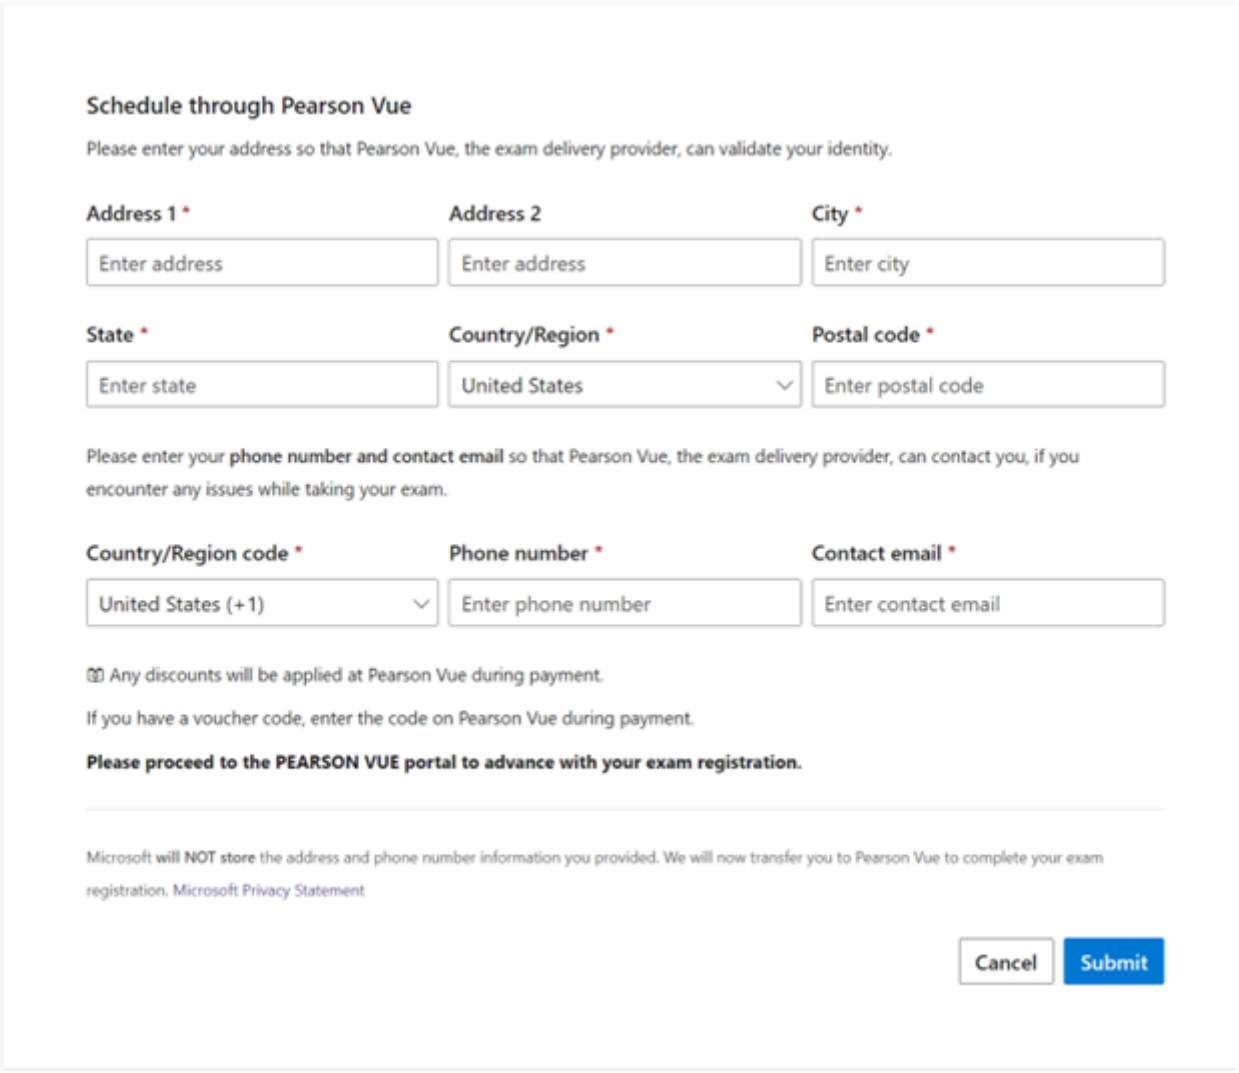
> ⓘ Note
>
> Most exams show only Pearson VUE as the exam provider. The Certiport option will appear only if you're taking a Microsoft Office exam or taking your exam as part of an academic process.



2. When you click the schedule button, you may be prompted to sign into/create your Learn Profile. We recommend you login with your personal Microsoft account (MSA).

3. If you don't have a legal name on your Learn Profile, you will be redirected to add one. Please ensure your legal name matches your Legal ID. Otherwise, you won't be able to take the exam.

4. You will be prompted to fill out some information such as address, phone number, and contact email before you are redirected to Pearson Vue. This information is only collected since Pearson Vue requires it and Microsoft never stores this information.



5. Click "Submit" to go to Pearson Vue. You can complete the rest of your scheduling on Pearson Vue.

> **Note**
>
> From your Learn profile, you can reschedule your appointment, cancel it, or begin a scheduled online exam—all in one place.

Prepare for an exam

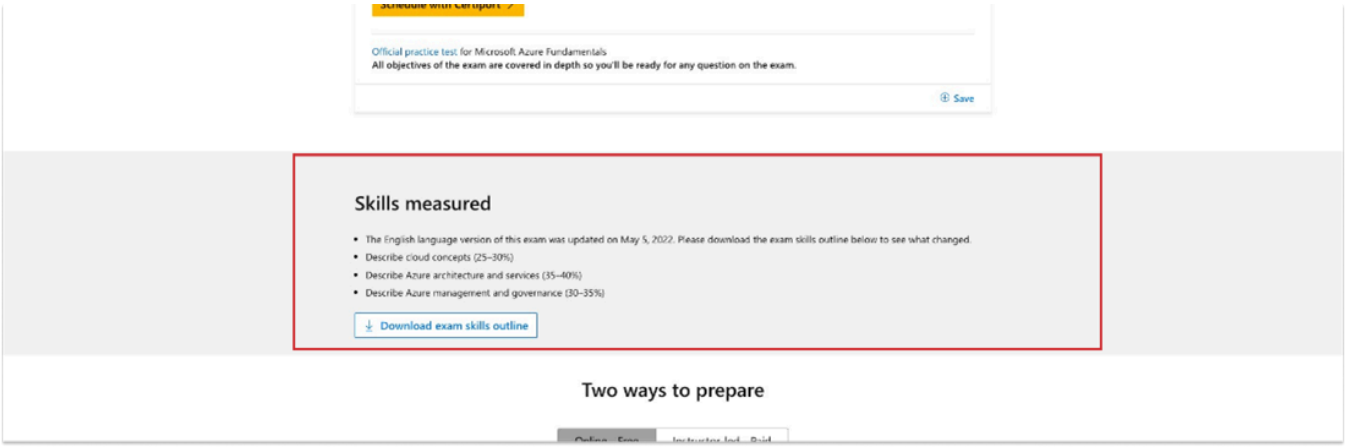
07/01/2025

Review the study guides for technical exams

Study guides are available for each role-based, specialty, and fundamentals exam. They will help you understand what to expect on the exam and include a summary of the topics the exam covers, with links to additional resources. They also include study resources where you can find self-study options and classroom training, as well as links to documentation, community sites, and exam prep videos. The information and materials in the study guides will help you focus your studies as you prepare for the exam.

Skills review for Microsoft Office exams

On every Microsoft Office Specialist (MOS) exam details page, you'll find a "Skills measured" section that includes a downloadable exam skills outline. This document summarizes the topics that the exam covers.



Watch exam prep videos

Exam prep videos are available for some Microsoft Certification exams and are listed on the exam details page and in the exam readiness zone. They provide tips, tricks, and strategies for preparing for an exam by describing key skills measured on the exam and how to allocate your study time. Each video segment corresponds to a major topic area on the exam. These on-demand videos, led by Microsoft Certified Trainers (MCTs), will highlight objectives that many test takers find difficult and include example questions and answers with explanations. You can browse all available videos in the exam readiness zone.

Self-paced training on Microsoft Learn

A list of free online learning paths is available on each certification and exam details page to help you prepare. You can also browse all learning paths and modules based on product (for example, Azure, Microsoft 365, Windows), based on role (such as developer or data engineer), or based on learning level (beginner, intermediate, and advanced).

Microsoft Learn online modules and tutorials are bite-sized, interactive skill builders you complete at your own pace and are available in multiple languages.

Instructor-led training

Find relevant instructor-led courses to prepare for your exam on the exam detail pages, or browse all instructor-led courses. If you're looking for in-depth, structured training, instructor-led training offers dedicated, personal attention from technical subject matter experts.

Online or in-person classes and workshops delivered by Microsoft Certified trainers are centered around up-to-date ILT course material on Microsoft Learn to help you prepare for certification.

Learn from a Microsoft Certified Trainer

Our worldwide training partner network offers trainer-delivered courses for your team leveraging Microsoft Certified Trainers (MCT). MCTs are best-in-class trainers who deliver Microsoft Official courseware through in-person and hybrid training deliveries. To ensure the best ILT deliveries connect with a training partner today and request an MCT instructor.

Take a Practice Assessment

Practice Assessments on Microsoft Learn: Some exams have free Practice Assessments, available in multiple languages, that are delivered through Microsoft Learn to help you prepare for your exam.

Practice Assessments help you practice skills, assess your knowledge, and identify the areas where you need additional preparation to accelerate your chances of succeeding on certification exams. These Practice Assessments are intended to provide an overview of the style, wording, and difficulty of the questions that you are likely to experience on this exam. These questions are **not** the same as what you will see on the exam nor is this document illustrative of the length of the exam or its complexity. For example, you may see additional question types, multiple case studies, and labs. These questions are **examples** only to provide

insight into what to expect on the exam and help you determine if additional preparation is required.

Taking a Practice Assessment is not a replacement for training taken or experience using Microsoft products.

Practice Assessments are available in multiple languages, allowing you to take the assessment in your preferred language as available.

Some of the questions on some practice assessments are generated by artificial intelligence. These questions are reviewed by SMEs before they are added to the Practice Assessment question pool.

Note that the exams may not be available in the same languages as the Practice Assessment.

If available, a link will be provided on the certification details page. Visit the Practice Assessments page to explore the comprehensive list of available Practice Assessments.

If you have any questions about Practice Assessments, review the FAQs.

We would like your feedback on the Practice Assessment experience; if you take a Practice Assessment, please complete the Practice Assessment Survey.

Practice Tests offered by MeasureUp: Some exams have practice tests that are offered through MeasureUp to help you prepare for your exam. If available, a link will be provided on the certification details page.

Microsoft Press resources

Get more help from study guides, videos, and practice exams from the experts at Microsoft Press.

Explore the exam sandbox

You can demo the exam experience by visiting our "exam sandbox." Here you can experience the look and feel of the exam before taking it. You'll be able to interact with different question types (e.g., build list, drag and drop, etc.) in the same user interface you'll use during the exam. Through the sandbox you can also learn which actions are required to answer each question type, where information about the exam is located (e.g., time remaining, questions remaining, etc.), how to mark questions for review, and how to leave comments. You'll also have access to the exam instructions, question type help, and the non-disclosure agreement, so you can experience the exam from start to finish.

The Microsoft Certification exam sandbox is available in the following languages:

- Arabic
- Chinese (Simplified)
- Chinese (Traditional)
- English
- French
- German
- Indonesian
- Italian
- Japanese
- Korean
- Portuguese (Brazil)
- Russian
- Spanish

The GitHub Certification exam sandbox is available in the following languages:

- English
- Japanese
- Korean
- Portuguese (Brazil)
- Spanish

Request an accommodation

If you use assistive devices, read aloud, fidget, or require extra time, you may need an accommodation. Accommodations **must be** requested before you register for the exam. Learn more about requesting accommodations.

Practice Assessments for Microsoft Certifications

Overview

Are you preparing for a Microsoft Certification exam? We're excited to announce Practice Assessments on Microsoft Learn, our newest free exam preparation resource that allows you to assess your knowledge and fill knowledge gaps so that you are better prepared for your certification exam.

These assessments provide you with an overview of the style, wording, and difficulty of the questions you're likely to experience on the exam. Through these assessments, you're able to assess your readiness, determine where additional preparation is needed, and fill knowledge gaps bringing you one step closer to the likelihood of passing your exam.

These questions are not the same as what you will see on the exam nor is this document illustrative of the length of the exam or its complexity. For example, you may see additional question types, multiple case studies, and labs. These questions are examples only to provide insight into what to expect on the exam and help you determine if additional preparation is required. Taking a Practice Assessment is not a replacement for training taken or experience using Microsoft products.

> **Note**
>
> Practice Assessments will be available in local languages soon.

Exam duration and exam experience

Exam duration

The number of questions on a certification exam is subject to change as we make updates to ensure it aligns with current changes in the technology and job role. Most Microsoft Certification exams typically contain between 40-60 questions; however, the number can vary depending on the exam.

Exam time varies based on the type of exam you take.

Expand table

Exam type	Exam duration*	Seat duration*
Fundamentals exams	45 minutes	65 minutes
Associate and expert role-based exams without labs**	100 minutes	120 minutes
Associate and expert role-based exams that may contain labs**	120 minutes	140 minutes
Microsoft Office Specialist (MOS) exams	50 minutes	60 minutes

*Exam duration refers to the amount of time that you have to complete the exam. Seat time refers to the amount of time that you should allocate for the exam. It includes the time needed to review the instructions, read and accept the Microsoft Certification Exam Candidate Agreement, complete the exam questions, and provide comments after completing it (if you choose to do so).

**Because labs can be removed at any time due to Azure outages, bandwidth issues, etc., Microsoft does not provide a list of exams with labs. When you register for the exam, you will be provided with the exam time. When you launch the exam, carefully review the overview pages that provide information about what to expect on the exam, including if labs are available.

Unscheduled breaks on exams

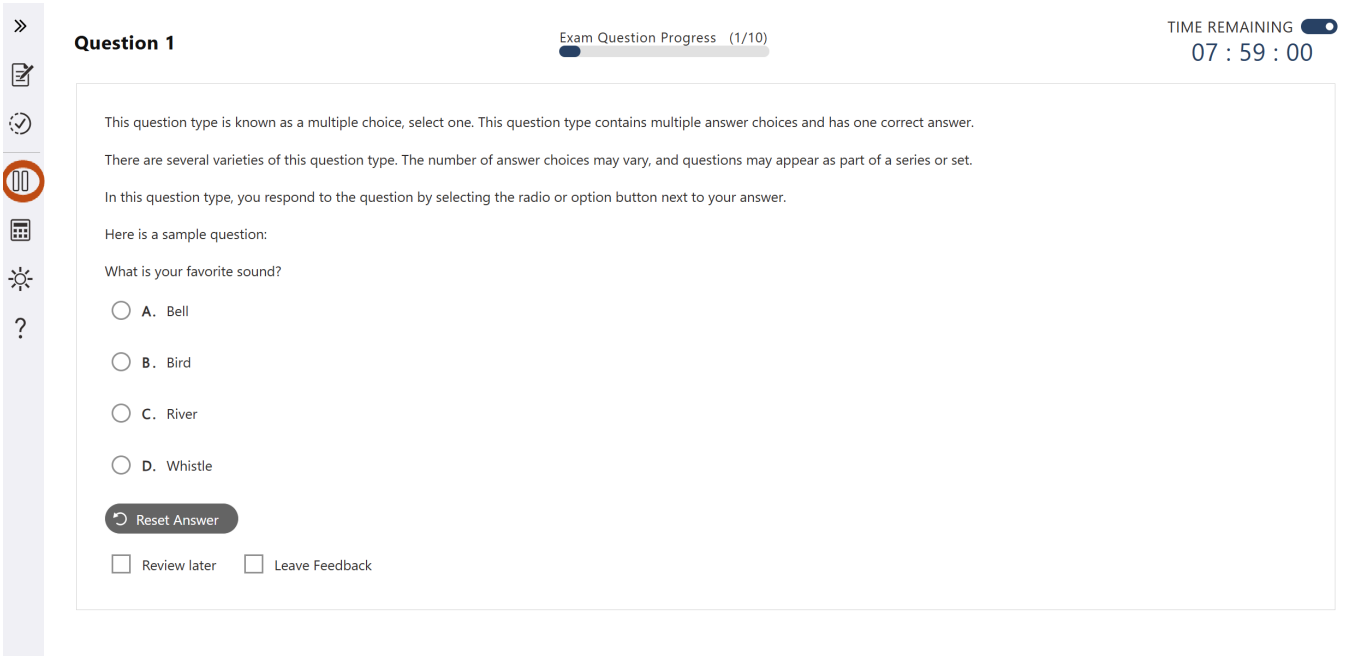
You may take unscheduled breaks during all exams, except Microsoft Office Specialist (MOS) exams, without requesting them in advance through the accommodation request process.

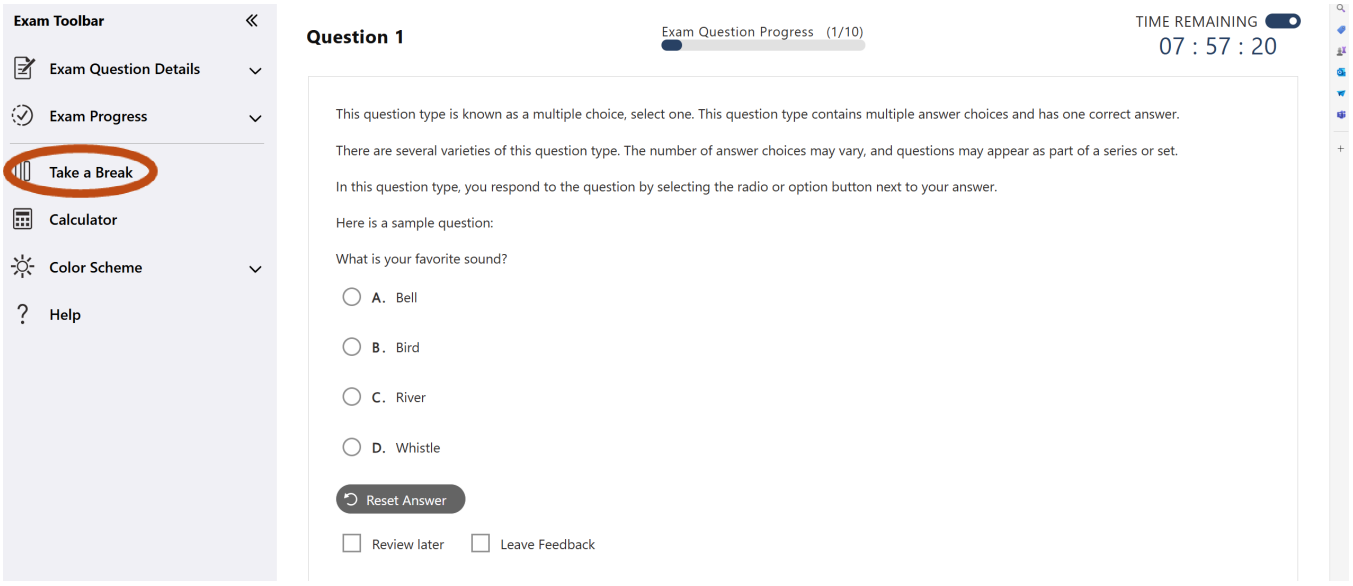
Some details:

- Five (5) minutes have been built into the exam time that can be used for break time. We have removed questions from the exam to accommodate this.

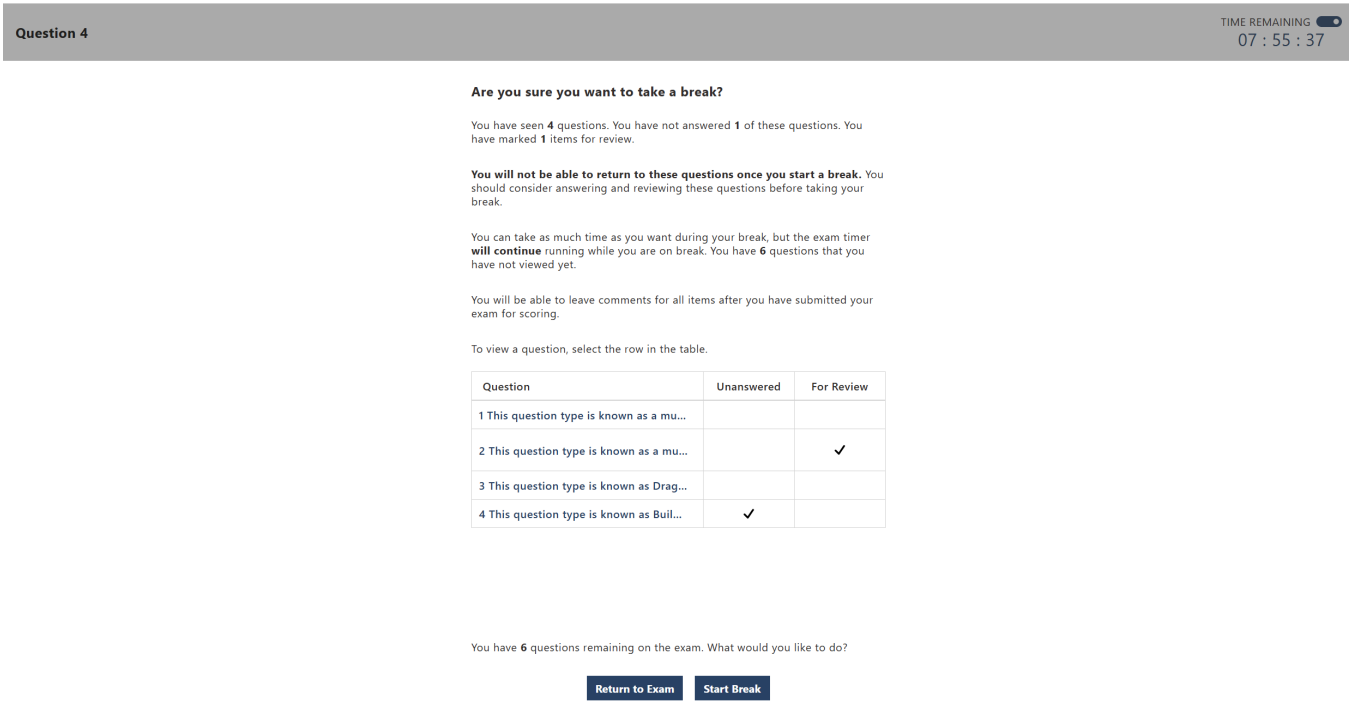
- While only 5 minutes have been added to the exam time, you can take as much time as you want during the break, and you can take multiple breaks; however, the **exam clock will continue** while you are on break. If the exam time ends while you are on break, your exam will be scored based on what you were able to complete before the exam ended. If you are unable to finish the exam because you were on a break or took a break, no adjustments will be made. You are responsible for managing your own time.
- Once a break is launched, **you will not be able to return to the questions that you viewed before the break** even if they are unanswered or marked for review.
- You can take a break at any point during the exam **except** in the middle of a lab or within our problem-solution question sets (where you are presented a problem and asked if the solution provided would solve the problem); breaks can be taken before or after these types of questions but not during them.
- You can take breaks during case studies, but you will not be able to return to any question seen before the break.
- You may leave the view of the camera while you are on break (e.g., to use the restroom, check on your child, etc.). You must make sure to initiate a break through the exam UI or your exam will be revoked.
- IMPORTANT NOTE: You **cannot** access any unauthorized materials during your break. If the proctor sees you doing so, your exam will be revoked. To learn more about unauthorized materials during exams, review the OnVUE guide.

To start a break, select the “Take a break” icon in the left navigation pane.

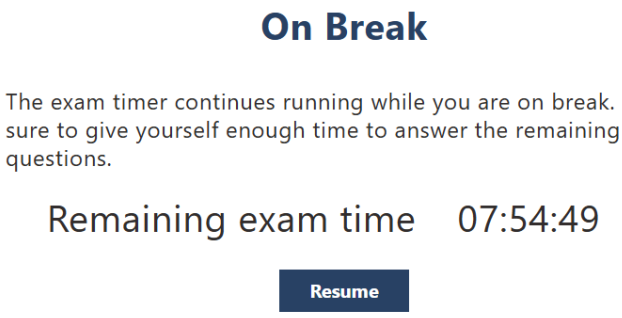




After selecting the “Take a break” icon, you will be informed of the number of questions you have seen, how many of them are unanswered, and how many are marked for review. Please answer and/or review those questions before starting your break. **You will not be able to return to these questions after your break.** Once you are ready to proceed to your break, select “Start Break.” If you decide not to take a break, select “Return to Exam.”



Once you have started your break, you will be reminded that the exam timer continues running and informed how many questions are remaining on the exam. You will also see the exam clock.



Accessing Microsoft Learn during your certification exam

You can access Microsoft Learn as you complete your associate or expert exam. NOTE that access to Learn is NOT available on Fundamentals exams or GitHub exams. This resource is intended to be used for those questions that describe problems where you may need to look

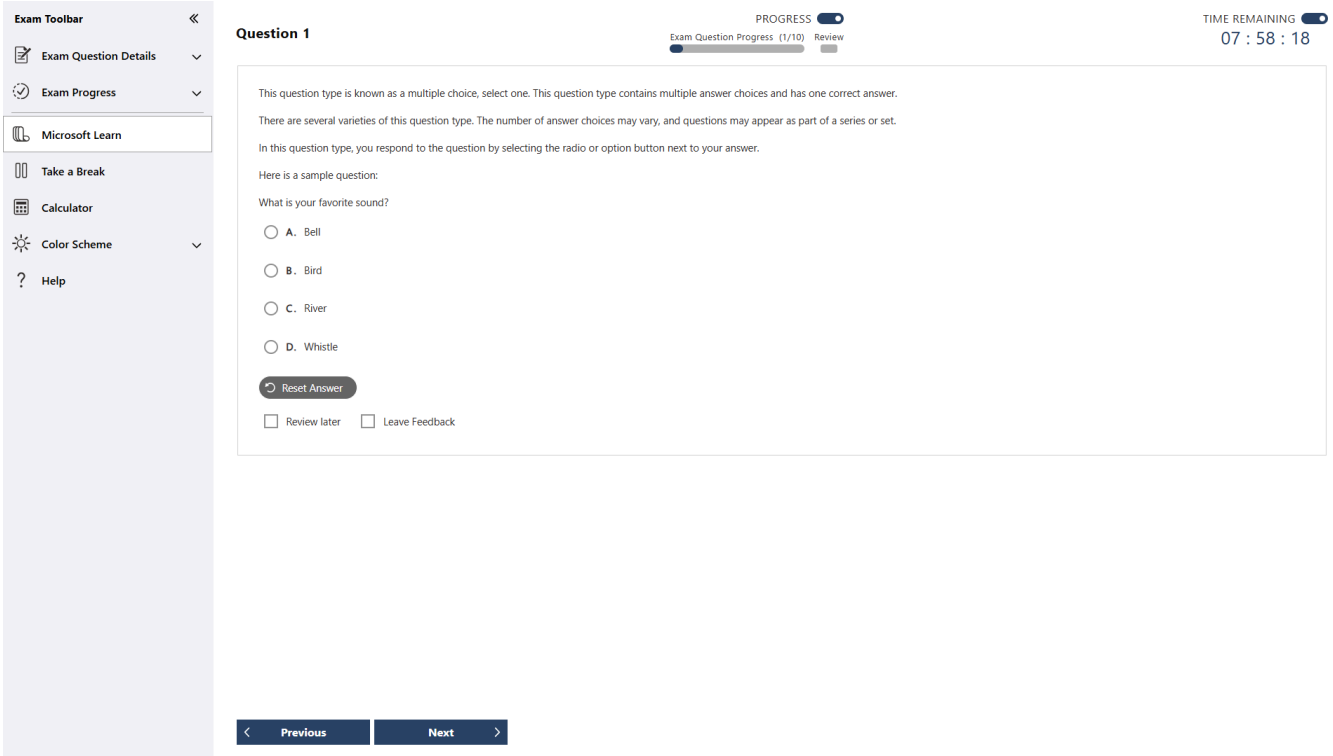
something up on Microsoft Learn. It is not something you should be leveraging to answer every question. If you do, you won't be able to complete the exam in the time allotted, and that is by design.

Here's what you need to know about this resource:

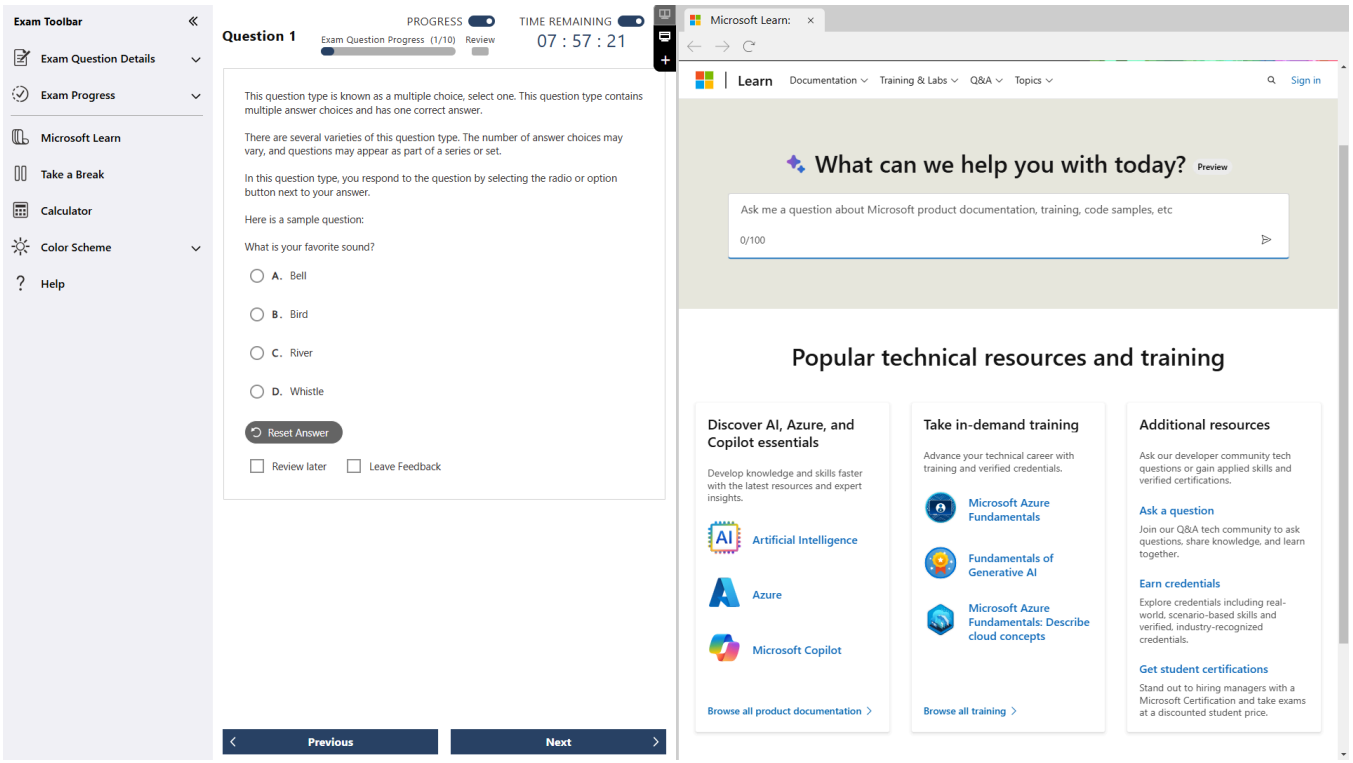
- You will have access to everything in the learn.microsoft.com domain except Q&A, Practice Assessments, and your profile.
- Extra time has not been added.
- The exam timer will continue as you explore Microsoft Learn content.
- This resource is only available on role-based exams, not fundamentals or Microsoft Office Specialist (MOS) exams.
- This resource will be available in the same languages in which the exam is available.
- You can use ctrl+F on Windows or command+F on Mac to search for content on a given page in Learn.

To use this resource during your exam, you will select the Microsoft Learn button available on the left navigation pane. This will open Microsoft Learn in a split screen to the right of the exam question. You can then navigate through the website as you normally would and expand it to full screen if you prefer. Below are a series of screenshots showing the experience.

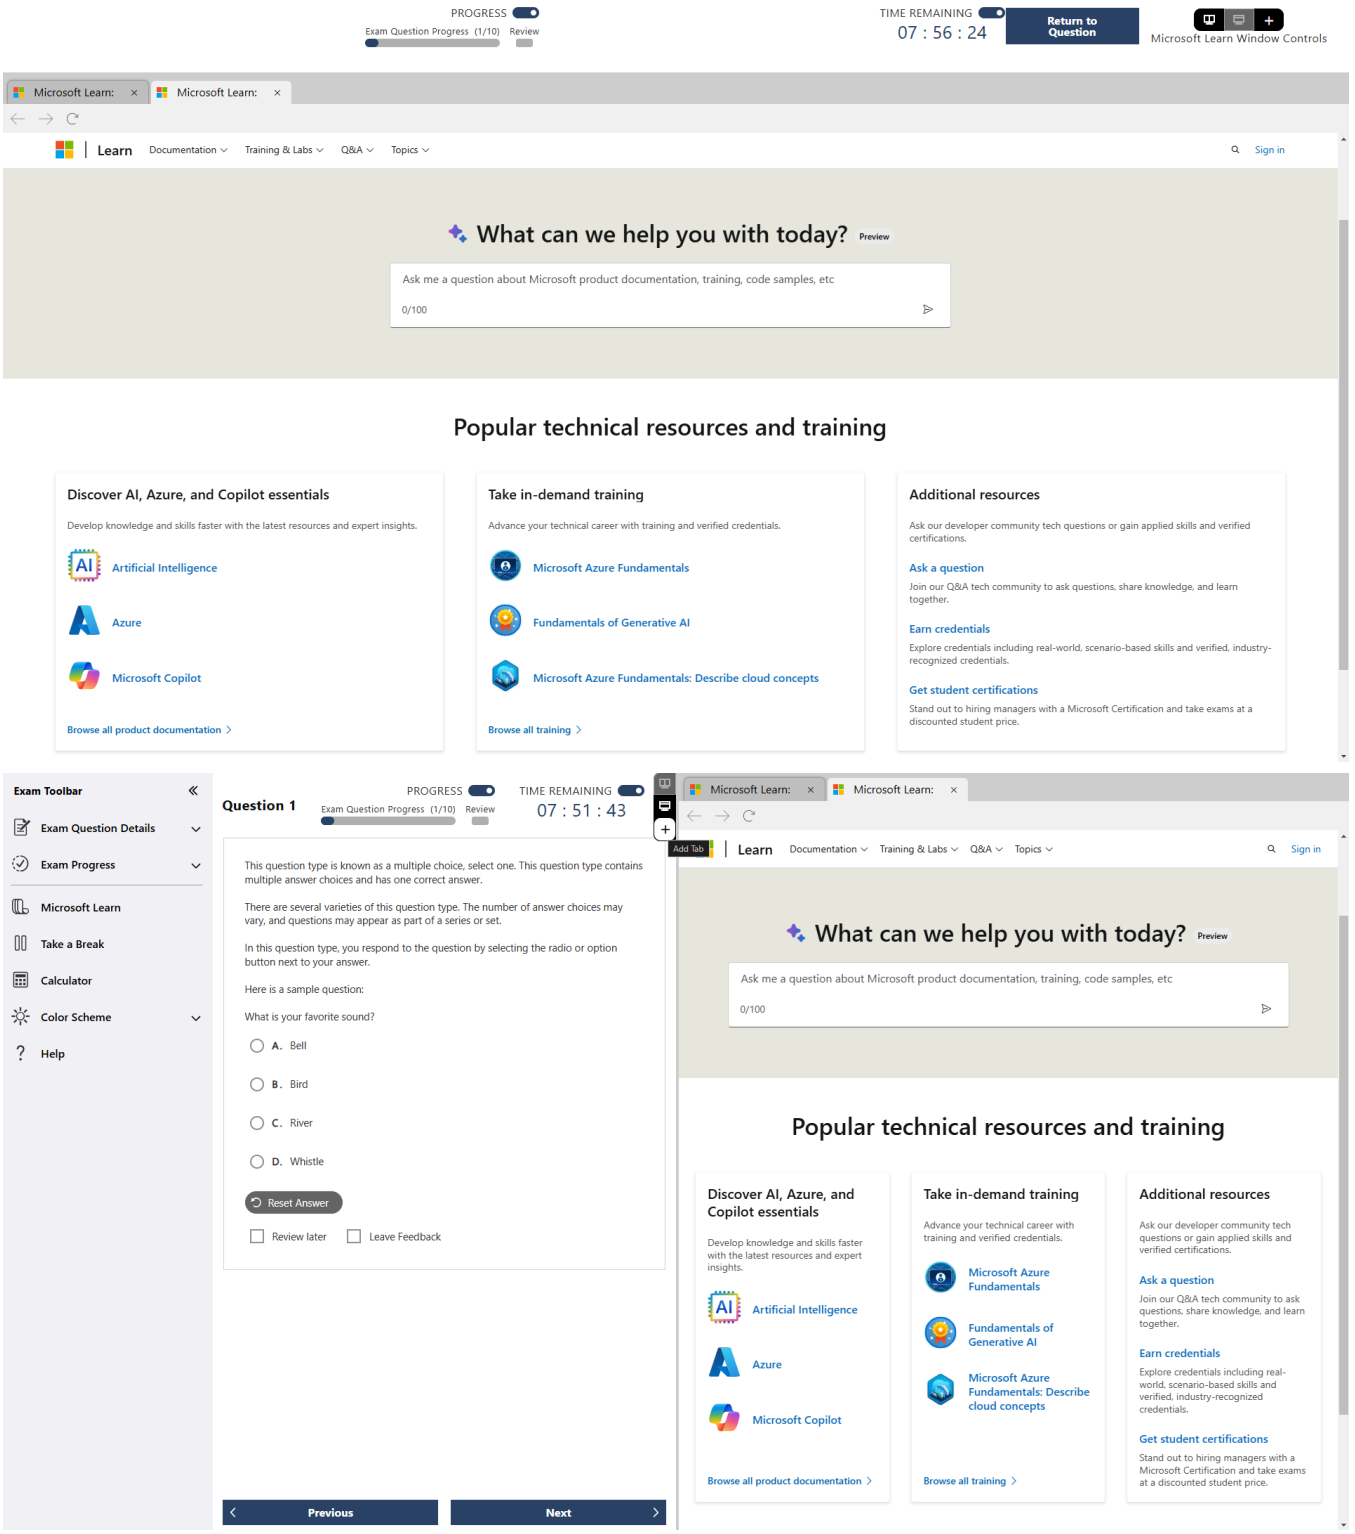
To open Microsoft Learn, select the icon on the left navigation pane.



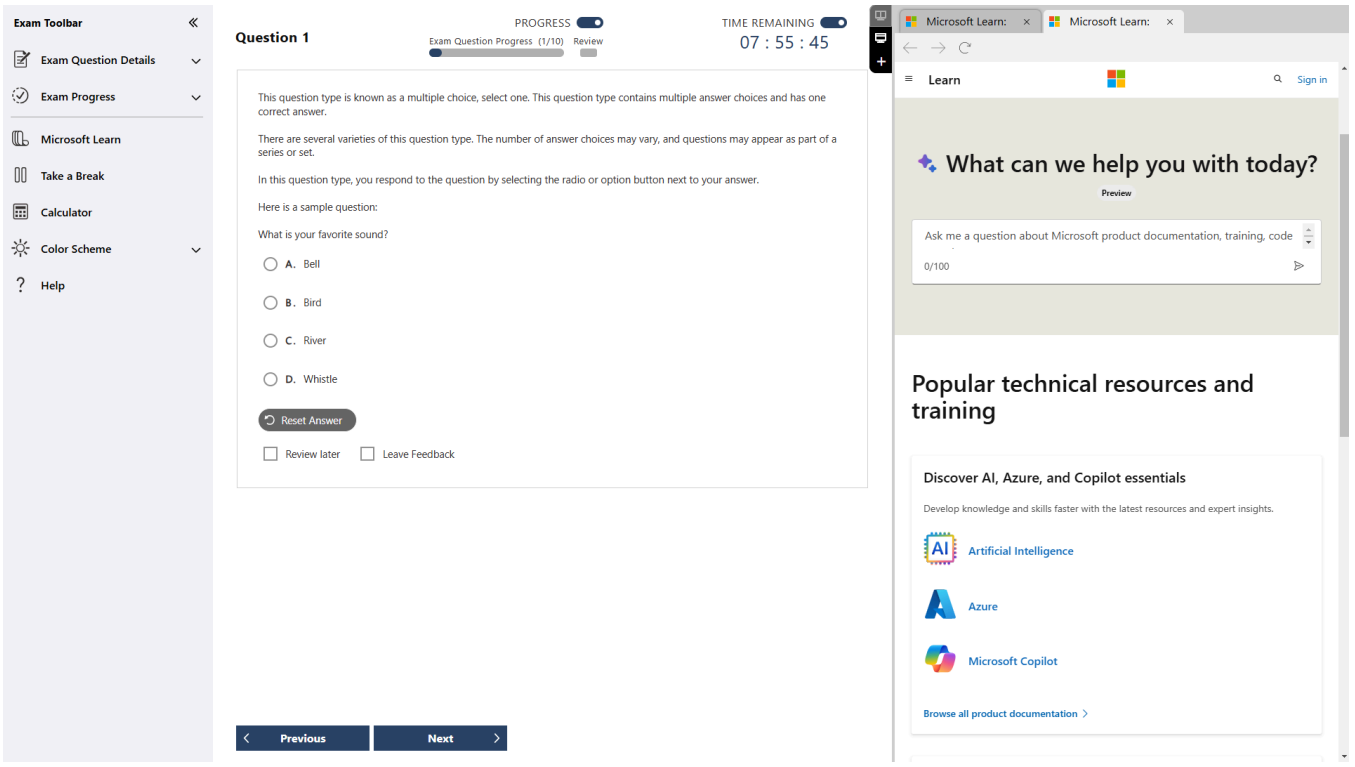
After selecting the icon, Microsoft Learn will open in a split screen to the home page.



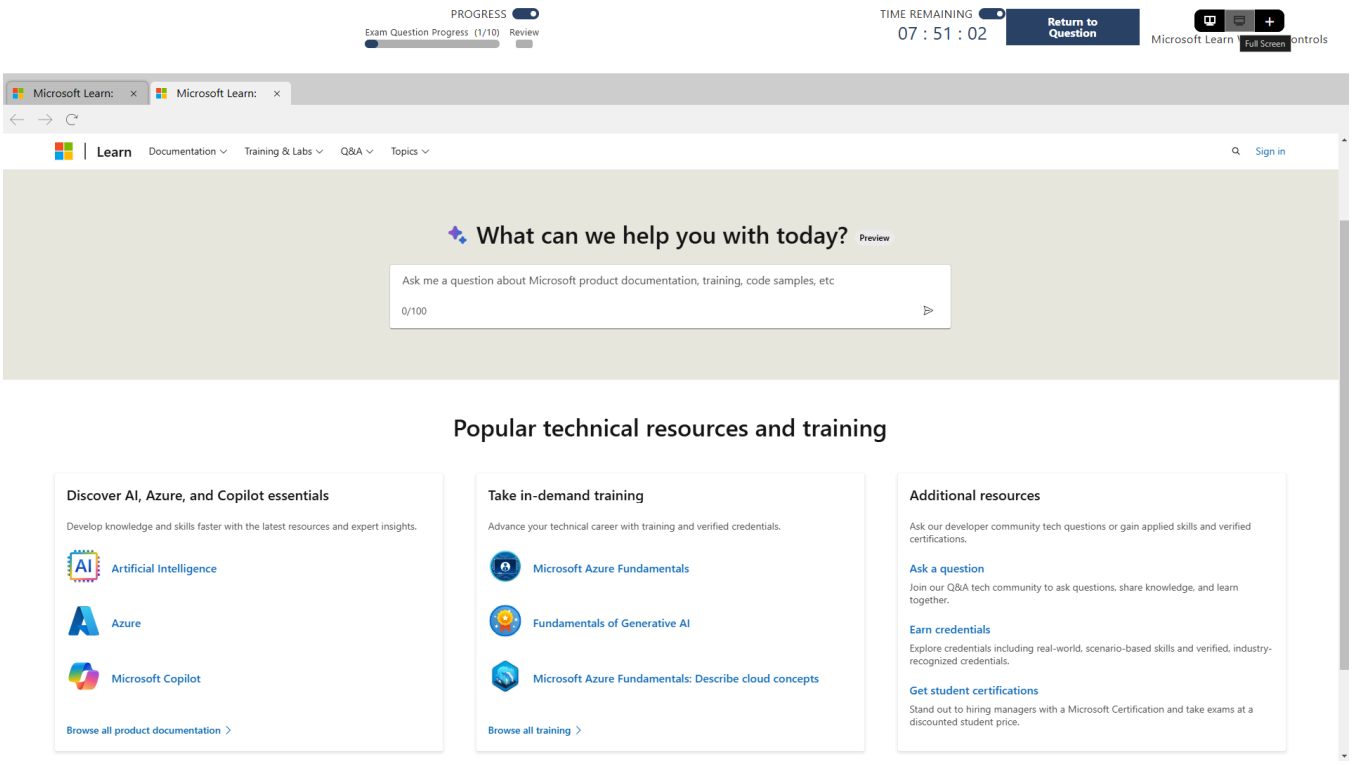
You can launch multiple tabs of the Microsoft Learn website and navigate to different portions of the site, except the Q&A section, practice assessments, and to your personal profile (you won't be able to login). These tabs can also be individually closed.



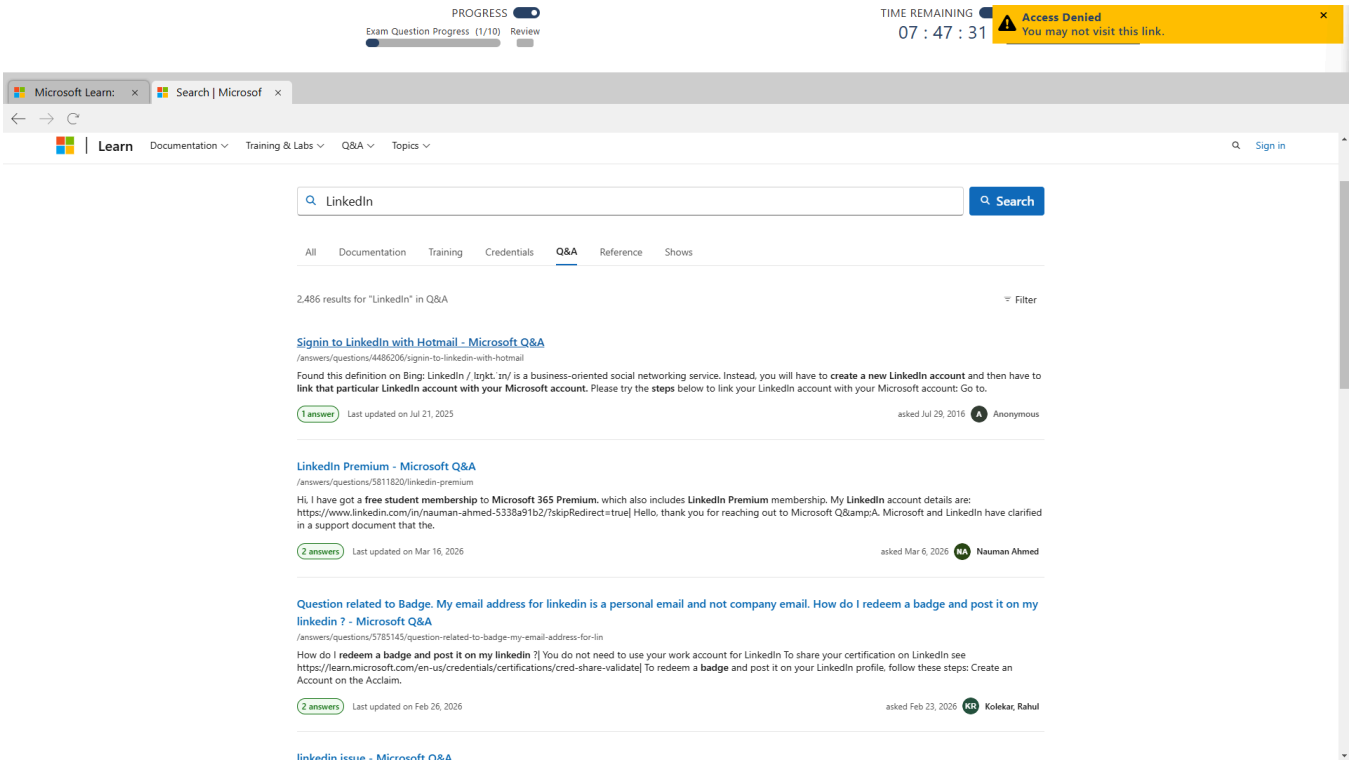
You can adjust how much of the screen shows the question and how much shows Microsoft Learn with a splitter between each window.



You can open Microsoft Learn into full screen. Full screen mode includes the test timer and question count information in the header.

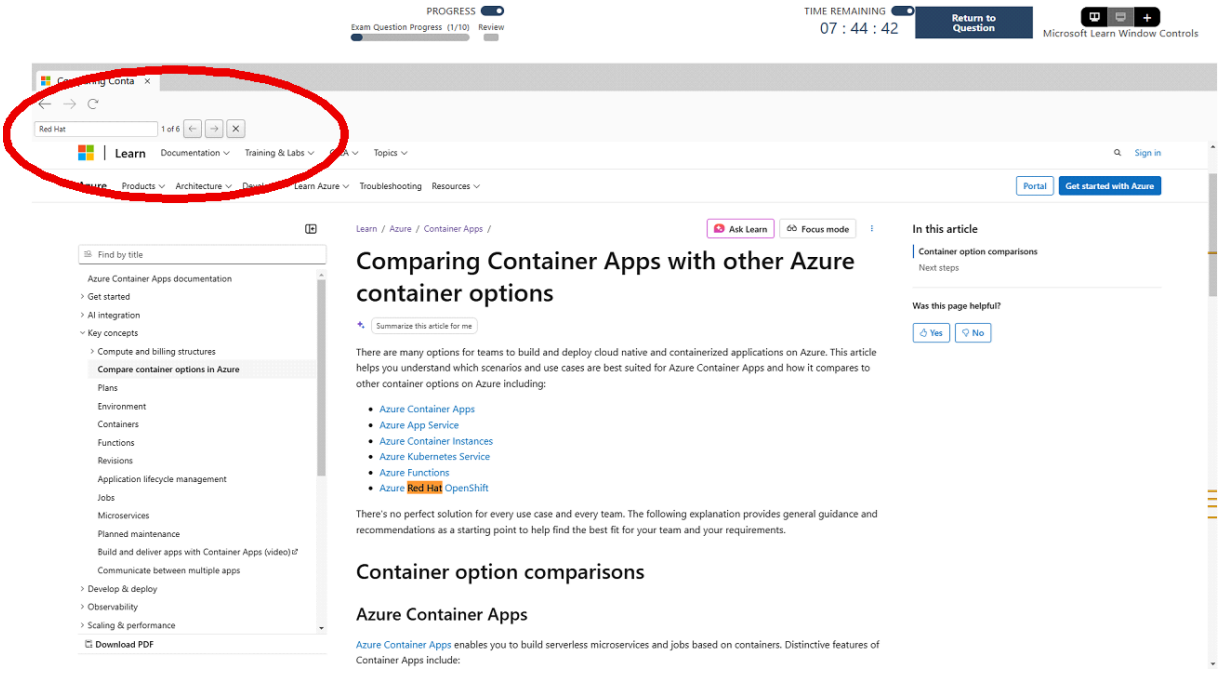


Web Browsing is restricted to the Microsoft Learn domain. While the Microsoft Learn site includes links to other webpages, such as GitHub, attempts to navigate to other web domains will prompt a message in the test window indicating the site is blocked.



Search functionality in Learn

- In the Microsoft Learn window, you can find content on the current page by pressing Ctrl+F on Windows or Command+F on a Mac.
- Enter text in the search area to highlight matches on the current Microsoft Learn page and display the number of times the search string appears on that page.
- Select the Next and Previous arrows to navigate through the search results.
- When you finish, select the Close button to hide the search area.
- This search feature is specific to Microsoft Learn. You cannot use it in the exam window.
- Closing the Microsoft Learn window resets your search history.



To see a full demonstration of the feature set, visit Accessing Microsoft Learn Video.

Take a Practice Assessment

Practice Assessments on Learn: Some exams have free Practice Assessments, available in multiple languages (exams may not be available in the same language), that are delivered through Learn to help you prepare for your exam.

These Practice Assessments are intended to provide an overview of the style, wording, and difficulty of the questions that you are likely to experience on this exam. These questions are **not** the same as what you will see on the exam nor is this document illustrative of the length of the exam or its complexity (e.g., you may see additional question types, multiple case studies, and possibly labs). These questions are **examples** only to provide insight into what to expect on the exam and help you determine if additional preparation is required.

Taking a Practice Assessment is not a replacement for training taken or experience using Microsoft products.

If available, a link will be provided on the exam details page.

NOTE that practice tests for Microsoft Office Specialist (MOS) exams are managed by Certiport.

Question types on exams

To protect exam security and the value of our certifications, we don't identify specific exam formats or question types before the exam. However, you can demo the role-based and fundamentals exam experience by visiting our "exam sandbox." We created this experience to provide you with an opportunity to experience the exam before you take it. You will have an opportunity to interact with the different question types that you may see during the exam in the exam user interface. In addition, this experience includes the same introductory screens, instructions, help information, and Microsoft Certification Exam Candidate Agreement that you will see on your exam. As a result, using this sandbox should better prepare you for the exam experience and increase your familiarity with the user interface, how to navigate between pages, what action to take to answer each of the different question types, where information about the exam is located (time remaining, questions remaining, etc.), how to mark questions for review, and how to leave comments.

If you use assistive devices, this is an opportunity to understand how those assistive devices can be used in the exam interface, how the keyboard can be used to navigate through the exam, and so on. Additionally, you will be provided with the opportunity to leave feedback on the accessibility and usability of the sandbox exam with your assistive device during the item

comment section. These comments will be monitored for future improvements to the experience.

Note that if you use assistive devices, you will need to request an accommodation to be able to use them during the exam. Learn more about requesting accommodations before you register for your exam.

Keep in mind that while this experience is designed to familiarize you with the exam experience and how to navigate through it, the secure browser that will be launched during a real exam is not enabled in the sandbox. When enabled during the exam, it will block all third-party applications, including assistive devices without prior approval; this is why you must request an accommodation if you would like to use one during your exam.

Here are some samples of questions you might see on an exam:

NOTE that Microsoft Office Specialist (MOS) exams are “Live-in-the-Application” and are very similar to the lab question type displayed above. You will be expected to perform tasks in the Office App that is the basis of the certification.

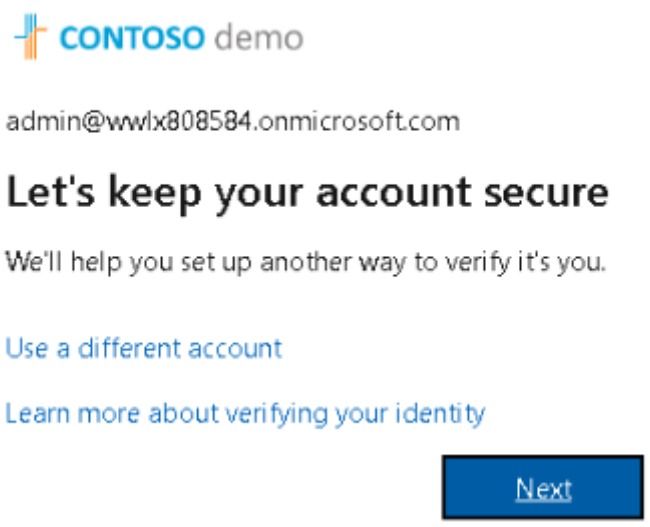
Certification Exam Lab and Applied Skills Assessment Lab Authenticator App

Microsoft now requires Multi-Factor Authentication (MFA) to access administrative portals. The administrative portals are used in lab environments, such as those on some certification exams and Applied Skills. To meet this requirement, we have created a process that meets the MFA requirements without requiring learners to have a mobile device.

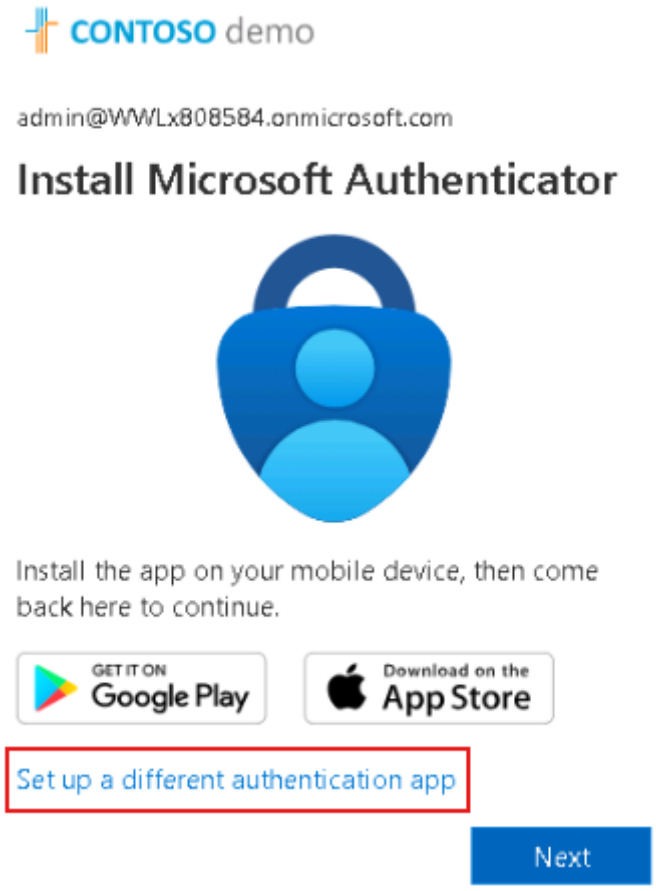
Instructions are provided in the lab, but if you'd like to familiarize yourself with them, you can find them below.

Step-by-Step Instructions

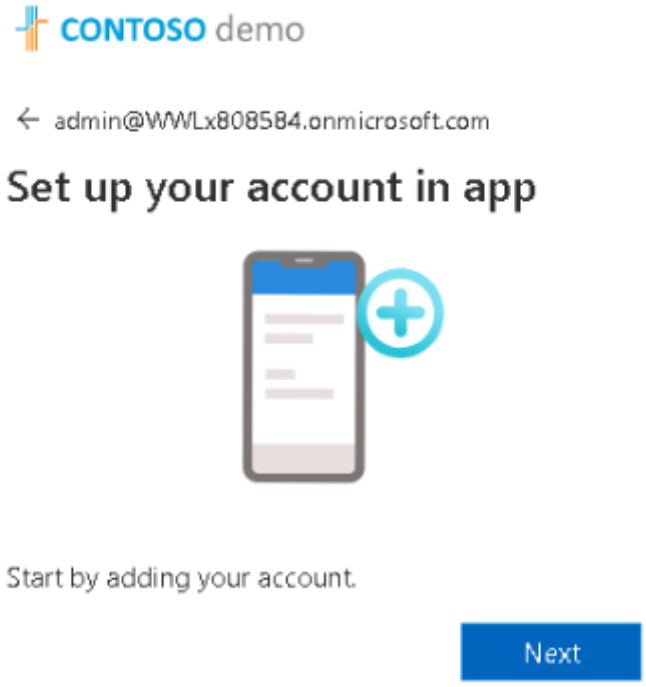
After entering your username and password in a Portal sign-in window, you will get a **Let's keep your account secure** prompt, select **Next**.



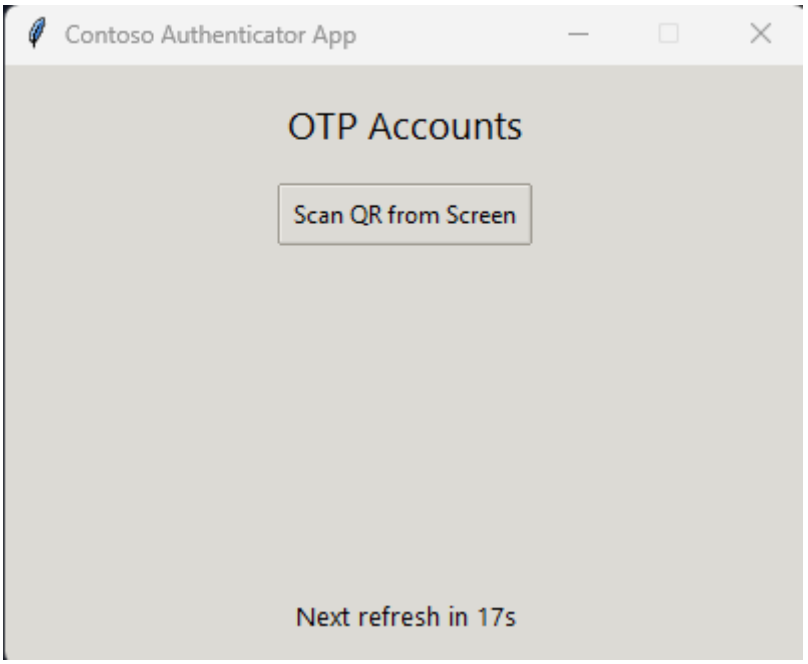
On the **Install Microsoft Authenticator** page, choose **Set up a different authenticator app** and select **Next**.



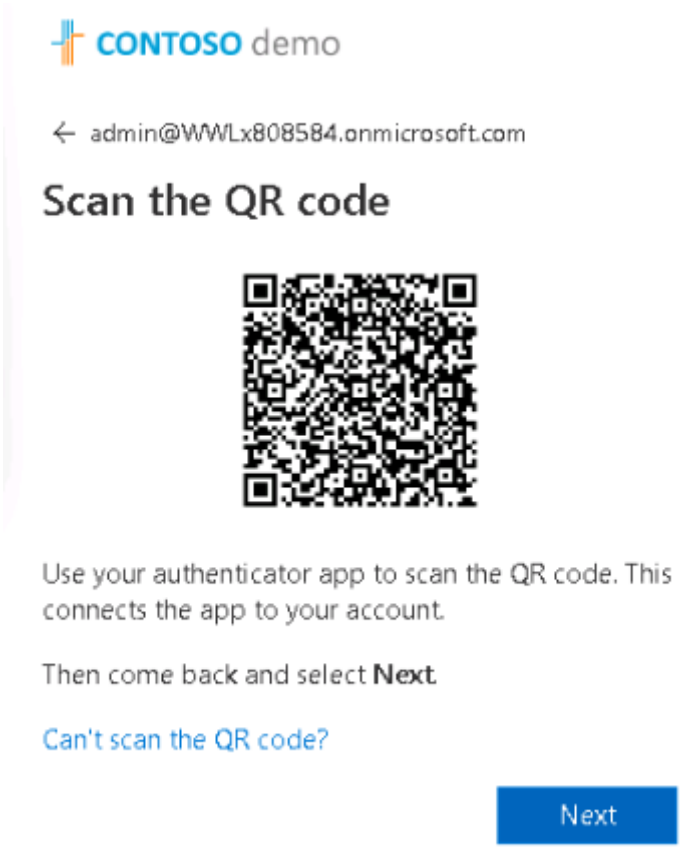
From the **Set up your account in app** page, select **Next**.



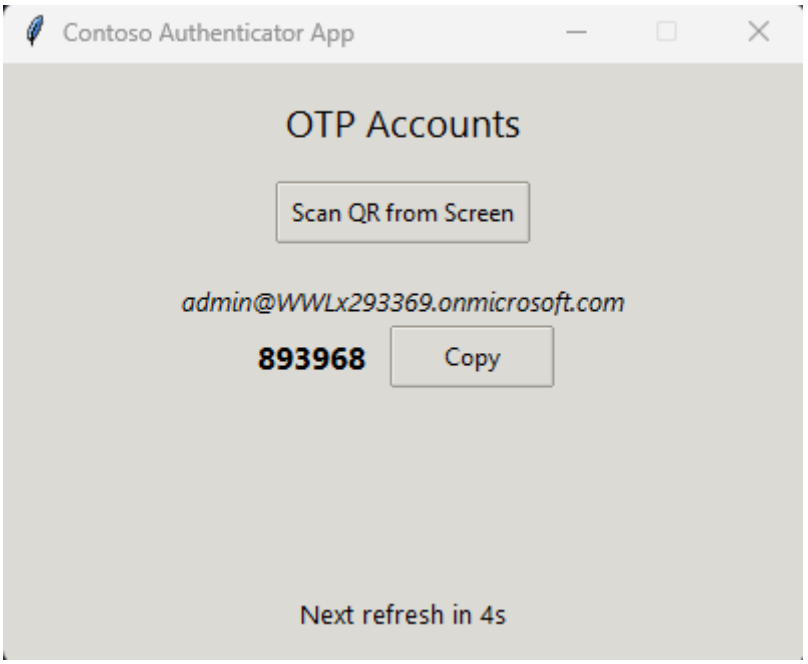
Start the **Contoso Authenticator App** by selecting it from your desktop or taskbar.



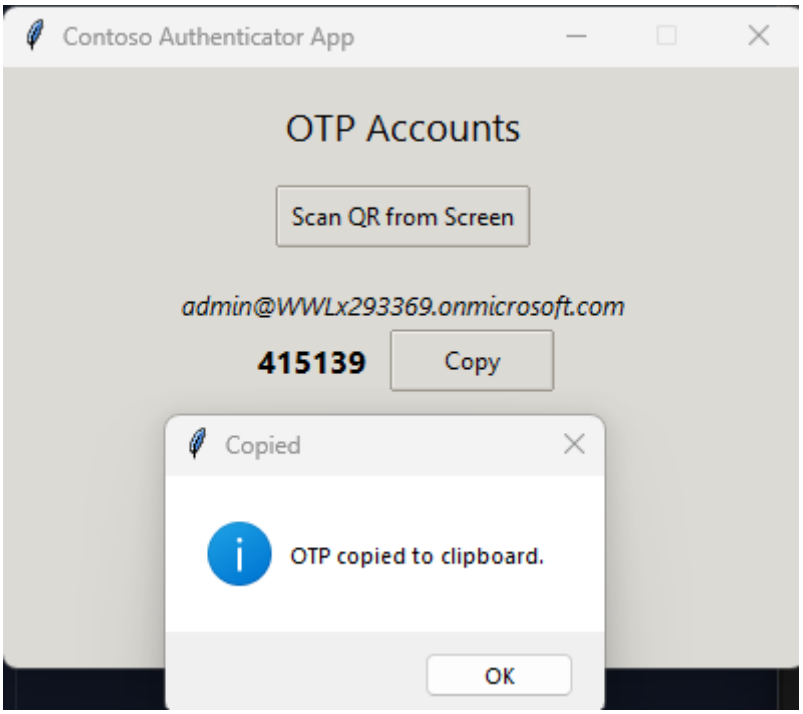
If necessary, move the **Contoso Authenticator App** window to display the QR Code on your screen.



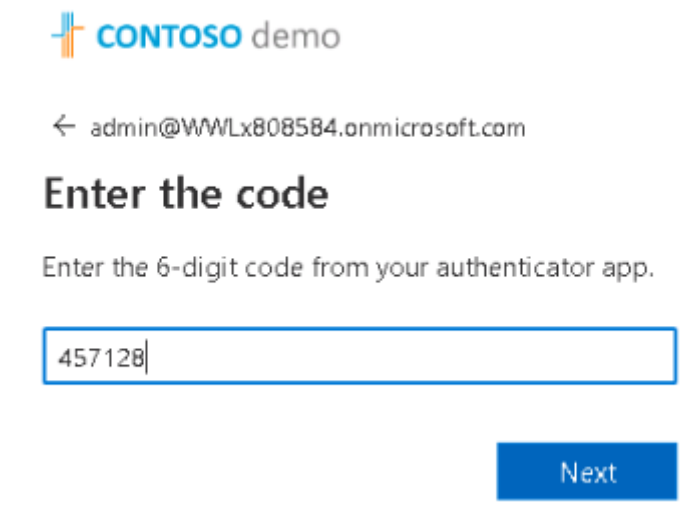
From the **Contoso Authenticator App**, select the **Scan QR from Screen** button.



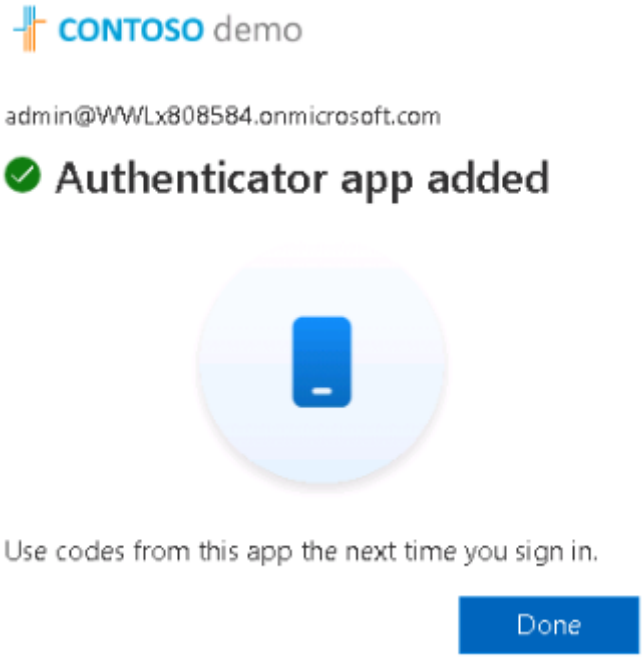
Select the **Copy** button to copy the OTP 6-digit code to the clipboard.



From the web page sign in window, paste the OTP 6-digit code, and then select **Next**.

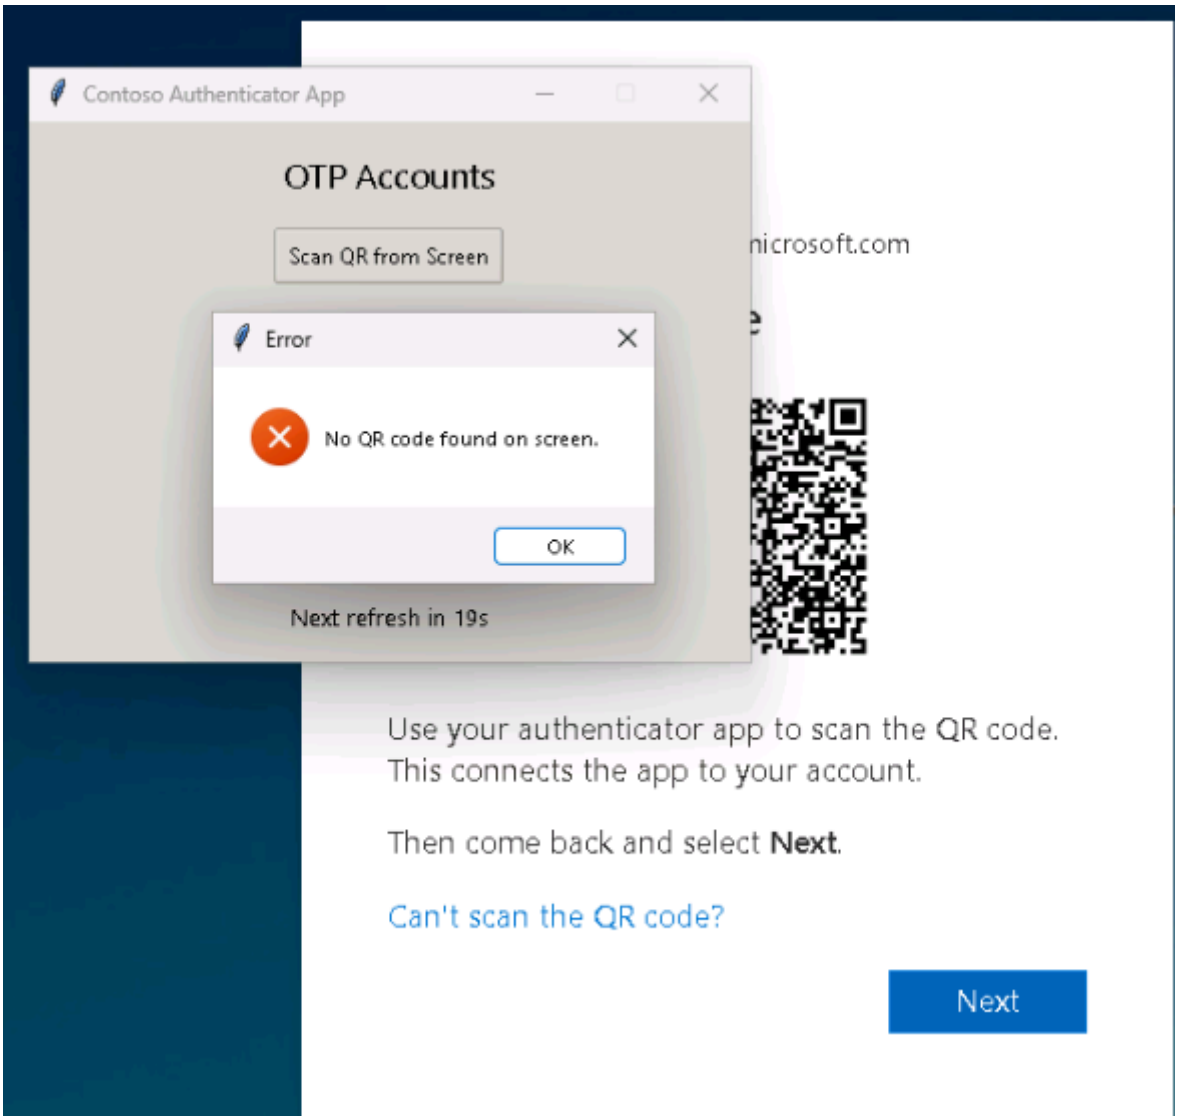


From the **Authenticator app added** page, select **Done**.

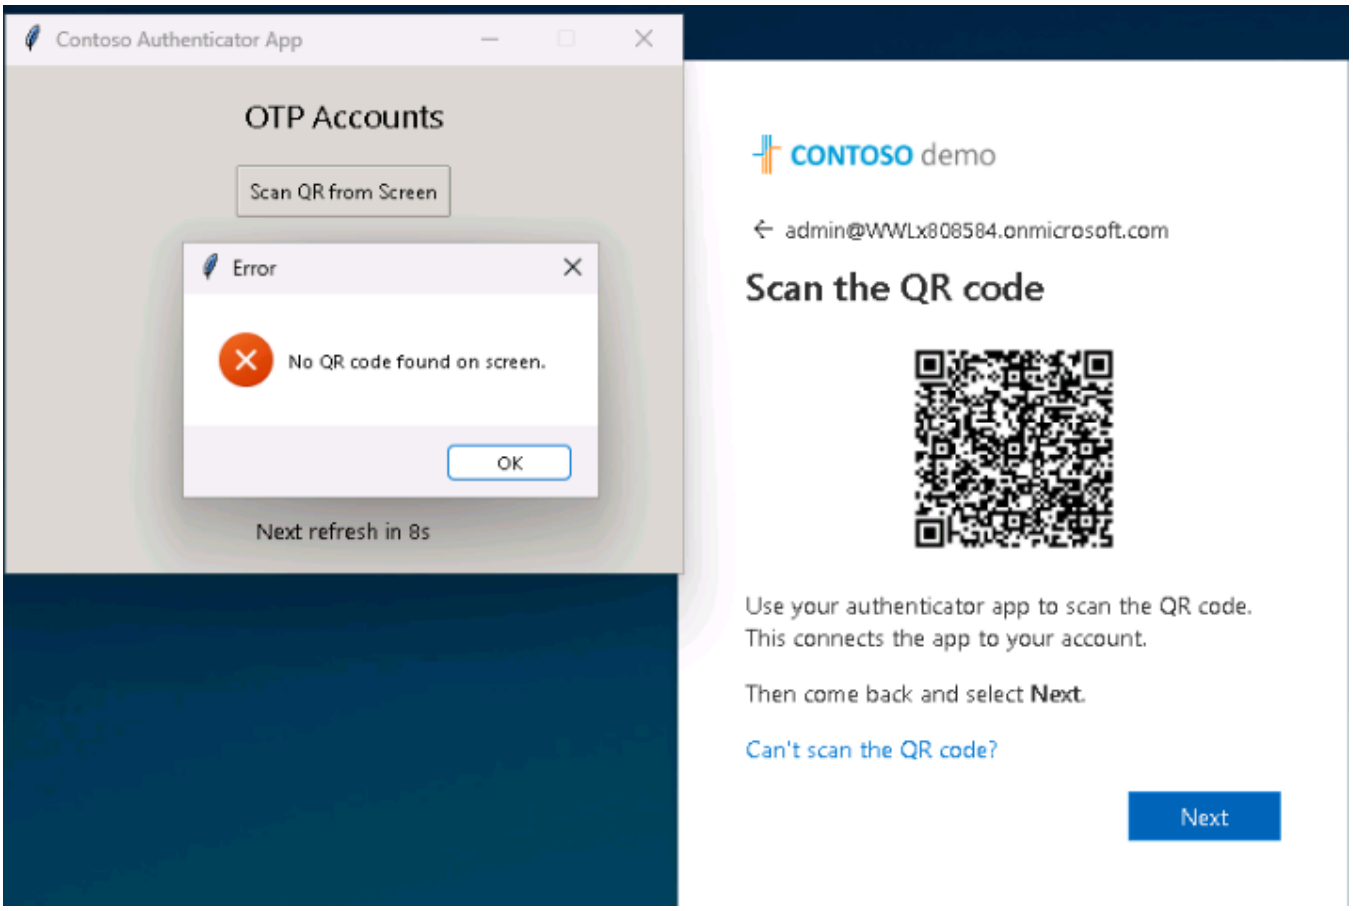


Troubleshooting

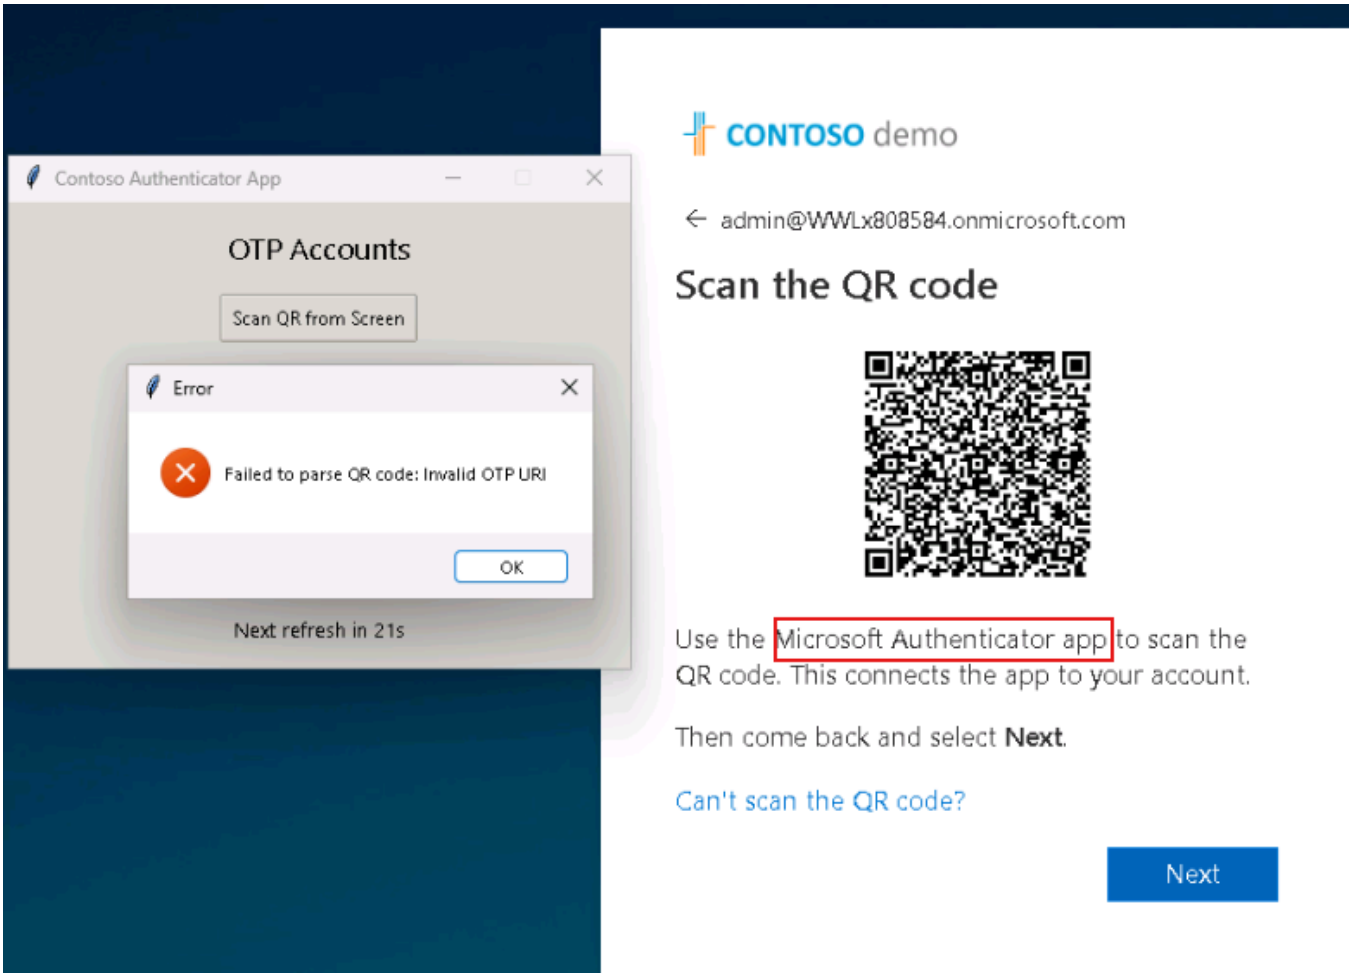
If the QR code is not found, move your app windows to ensure that the QR code is visible.



If the QR code is visible but is NOT found, change zoom display settings to 120%.



If you receive the **Failed to parse QR code: Invalid OTP URI** error, restart the process and ensure to select the **Set up a different authentication app** option.



NOTE that Microsoft Office Specialist (MOS) exams are “Live-in-the-Application” and are very similar to the lab question type displayed above. You will be expected to perform tasks in the Office App that is the basis of the certification.

Exam scoring and score reports

Article • 05/27/2025

Scores needed to pass exams

- **Technical exams**: All technical exam scores are reported on a scale of 1 to 1,000. A passing score is 700 or greater. As this is a scaled score, it may not equal 70% of the points. A passing score is based on the knowledge and skills needed to demonstrate competence as well as the difficulty of the questions.
- **Microsoft Office exams**: All Microsoft Office exam scores are reported on a scale of 1 to 1,000. The actual score you need to pass depends on the specific exam you're taking.

How exams are scored

- When answering most multi-part questions, you'll receive one point for each correctly answered component. You can earn all, some, or none of the points possible for that question. If a question is worth more than one point, it will be noted in the question. Usually, you'll receive one point for each correctly answered component.
- There's no penalty for guessing. If you choose an incorrect answer, you simply won't earn the point for that question or part. No points are deducted for incorrect answers.
- Some questions on the exam may not be included in your score. These questions are used to gather data to update and improve the quality of each exam. However, as soon as we have the necessary data to evaluate their quality, questions that meet our psychometric standards will be scored. You won't know which questions are unscored, so you should answer every question as if it will be included in your score.
  Microsoft continues to introduce new and innovative question types that may require different approaches to scoring. Alternate approaches to scoring will be noted in the question text.

When to expect your score

- For most exams, you'll have results within minutes of finish the exam. You'll also get a report with your exam score and feedback on your performance. Exams with labs take about 30 minutes to score, so you'll have to wait a bit longer. Your score will be available in your Learn profile within 24 hours.
- If you took a beta exam, you won't receive results until the exam completes the beta process and goes live. To learn more visit: Beta exams.
- For exams taken with Certiport, the exam provider for students and educators, you'll be presented with a screen showing your final score and pass/fail status as soon as you finish

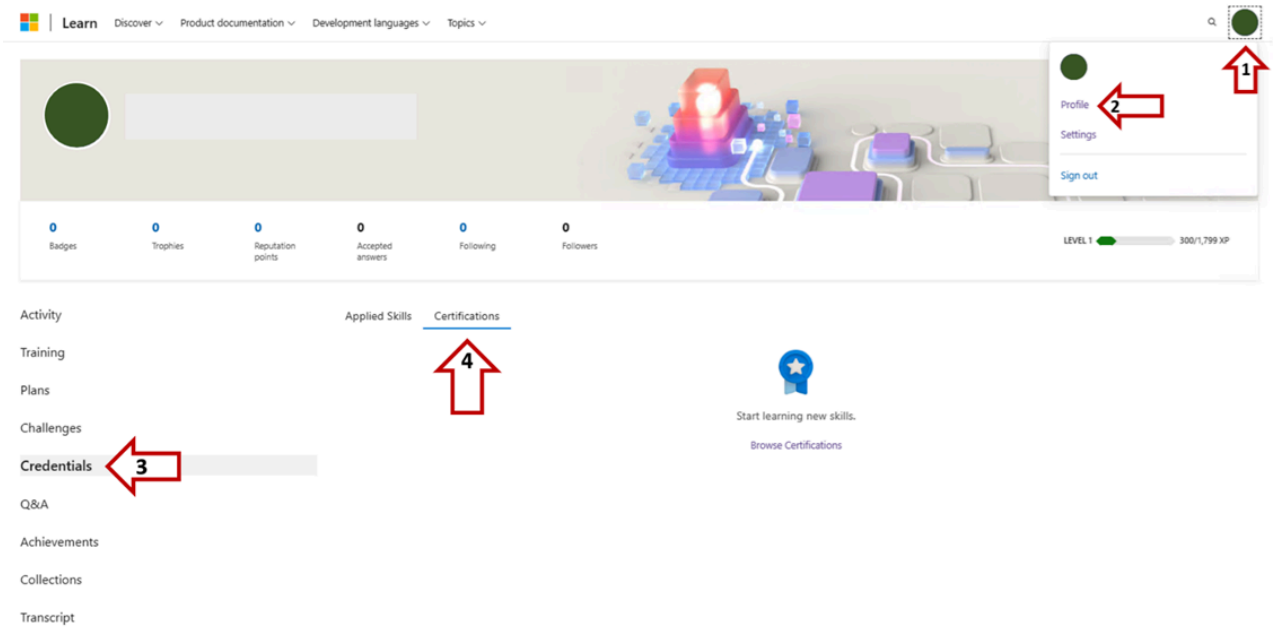
the exam. Your results will also be available in your Learn profile or in your Certiport dashboard within 24 hours. To learn more about accessing your Certiport transcript, visit: Certiport's FAQs.

How to access your score report

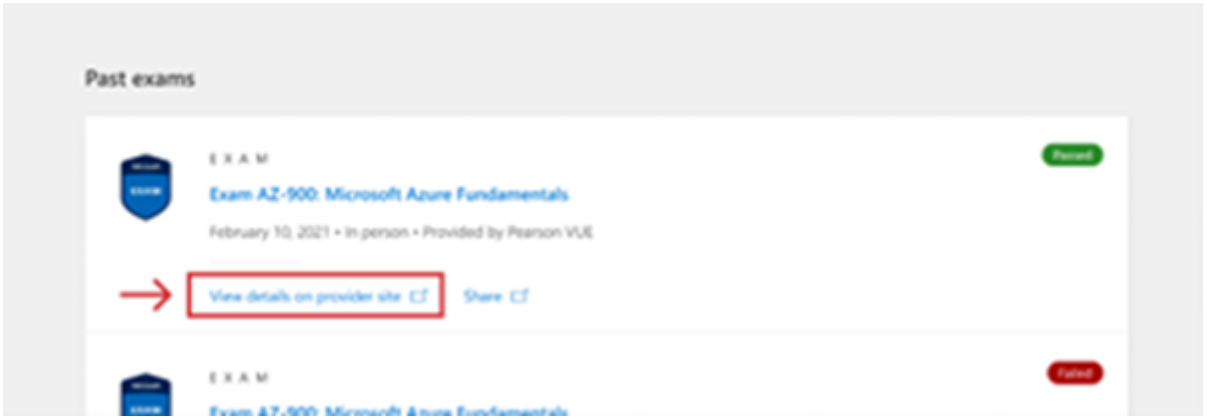
Score reports are available online for exams taken with Pearson VUE and Certiport.

To access your Pearson VUE score report:

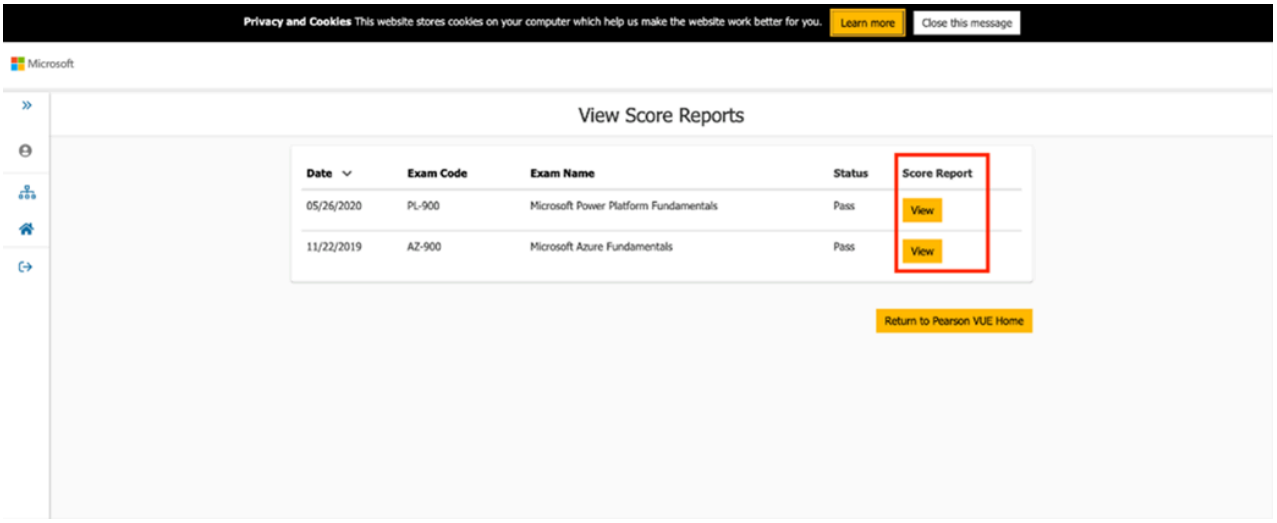
1. Sign into Learn using the same personal Microsoft account (MSA) you used to schedule your exam.
2. Select the Profile (Step 1 and 2) and then choose Credentials (Step 3) inside the profile menu. Click Certifications (Step 4)



3. Scroll to the section titled "**Past exams**" and locate the exam. Select "**View details on provider site**" to be taken to the exam provider's dashboard.

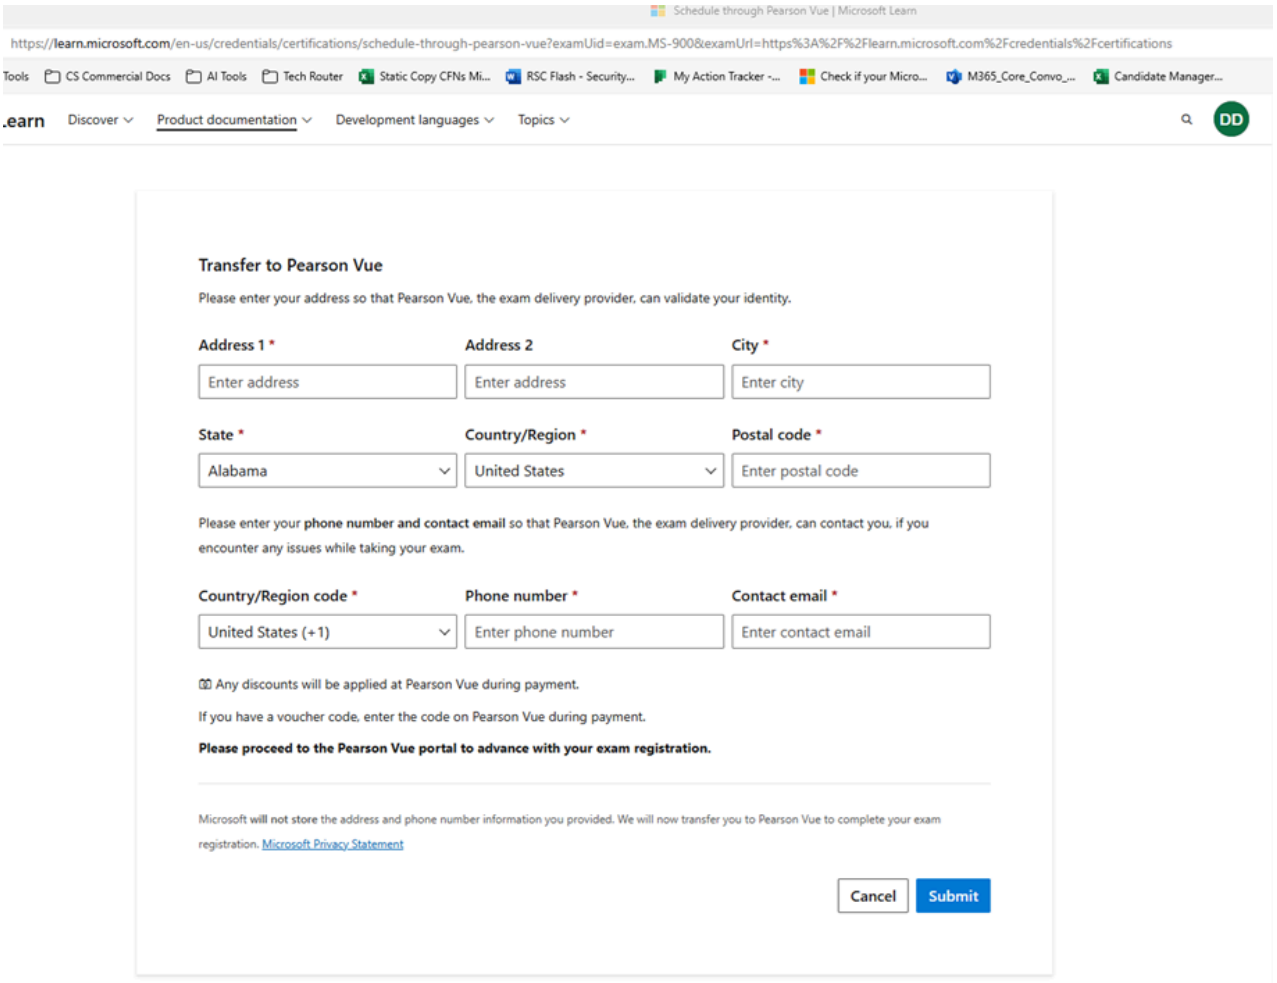


4. Look for the exam for which you wish to view the score report, and then select the '**View**' button.

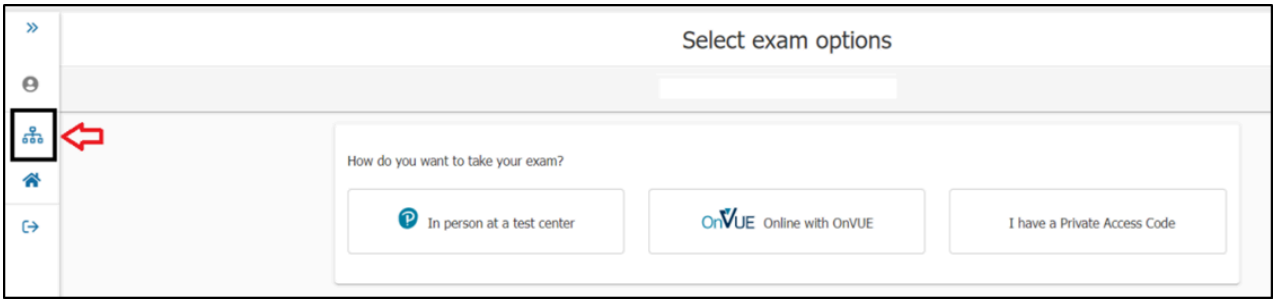


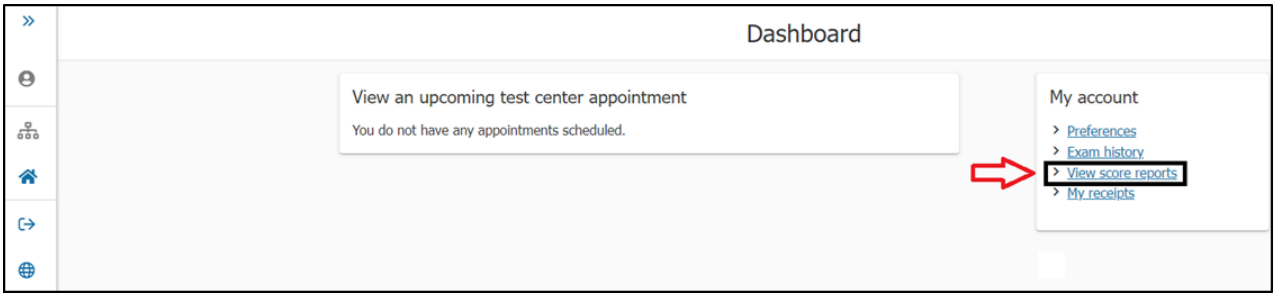
Alternatively, you can also follow the steps provided below to view your score reports directly from the Pearson VUE website:

1. Follow the steps on how to schedule an exam by selecting a certification on this page Browse Credentials | Microsoft Learn
2. Before being redirected to Pearson Vue, you'll need to provide details such as your address, phone number, and contact email.



3. Once done, you will be redirected to the Pearson VUE Dashboard. Click on the Pearson Vue Home Icon and then “View Score Report”





Understand an exam score report

The score report provides:

- A numeric score for overall exam performance
- Pass/fail status
- A bar chart showing performance on each skill area assessed
- Detail on how to interpret your results

The bar chart shows your performance for each skill area. Shorter bars indicate weakness, longer bars show strength. The chart can't be used to calculate the number of questions answered correctly in a section or on the exam as a whole.

What to do if you fail an exam

If you fail a certification exam, don't worry. You can retake it 24 hours after the first attempt. For subsequent retakes, the amount of time varies. For full details, visit: Exam retake policy.

To prepare for a retake, review the strengths or weaknesses revealed on your score report. Practice the skills where your exam performance was weak as well as the skills in the content areas with the highest percentage of questions. You can also review exam preparation resources on the exam details page and the prepare for an exam page. **Note**: Microsoft does not share which questions were answered incorrectly.

When you're ready to retake the exam, schedule an appointment and pay (if applicable) for the exam according to the exam retake policy.

Why Microsoft reports scaled scores

Scaled scores are standard practice across the certification and licensure industry because they help candidates gauge improvement between retakes. The passing score is based on subject matter experts' review of the question difficulty in relation to an expected skill. For easier sets of questions, more points are required to pass. For more difficult sets of questions, fewer points are required to pass. (This is why providing a simple percent correct won't help you gauge success.)

Frequently asked questions about exam scoring and score reports

Can I find out which questions I answered incorrectly?

No. Microsoft certification exams are designed to validate your skills in various technologies and job roles; they are not designed for learning purposes. Qualified candidates will be able to

pass the exam regardless of the questions they are asked; if they have the skills being assessed, they should be able to answer questions to demonstrate those skills.

In addition, to protect the integrity and fairness of the certification process, Microsoft does not share information about the specific questions that were answered incorrectly. Sharing details about incorrect questions could compromise the integrity of the Certification, making it easier for future candidates to anticipate and prepare for specific questions rather than demonstrating their overall competency.

Finally, the certification exam aims to evaluate your ability to apply knowledge and skills in a comprehensive manner. Providing feedback on individual questions might lead to a narrow focus on specific areas, rather than encouraging a well-rounded understanding and application of the skill being assessed.

Use the information provided in this report to focus your study efforts on areas of weakness. If you gain experience in those areas, your skills will improve.

I received the same score each time I took the same exam. Is something wrong?

No, receiving the same score on multiple attempts does not indicate an error. It's not uncommon for candidates to earn similar or identical scores on multiple attempts. This consistent result demonstrates the reliability of the exam in evaluating skills. If this happens, consider other ways to learn and practice. Learn more about how to prepare for an exam.

I scored zero in one of the sections. How is this possible?

Some skill areas (those with less critical or infrequently performed skills) have fewer questions than others. Therefore, if you had trouble with a skill area presenting just a few questions, you may score zero.

I experienced significant delays between some of the questions. Was my response recorded? Was it scored correctly?

You may experience delays of up to a minute between questions. The exam delivery provider's software is designed to accommodate this. Your answers are recorded, and the exam was scored correctly.

Does the score report show a numerical score for each section?

No, the report only shows a numerical score to reflect overall performance. We provide section level information in a bar chart to show your strengths and weaknesses more clearly.

The bars on the score chart show that I scored more than 70 percent. Why didn't I pass?

Because each section of the exam (bar on the chart) contains a different number of questions, you cannot combine the results across these sections to determine your overall result. In other words, there is no one-to-one relationship between the length of the bars and your pass/fail status.

Online proctored exams

Article • 09/19/2023

Why take an online proctored exam?

Online proctored exams are a convenient way to earn certifications from your home or office rather than a test center. You'll save travel time and the stress of finding the test center on exam day. Microsoft partners with Pearson VUE to deliver certification exams through online proctoring.

Visit: About online exams with Pearson VUE.

Before registering for an online proctored exam

Online proctored exams are convenient, but there are some technical requirements. It's a good idea to review the process thoroughly before scheduling.

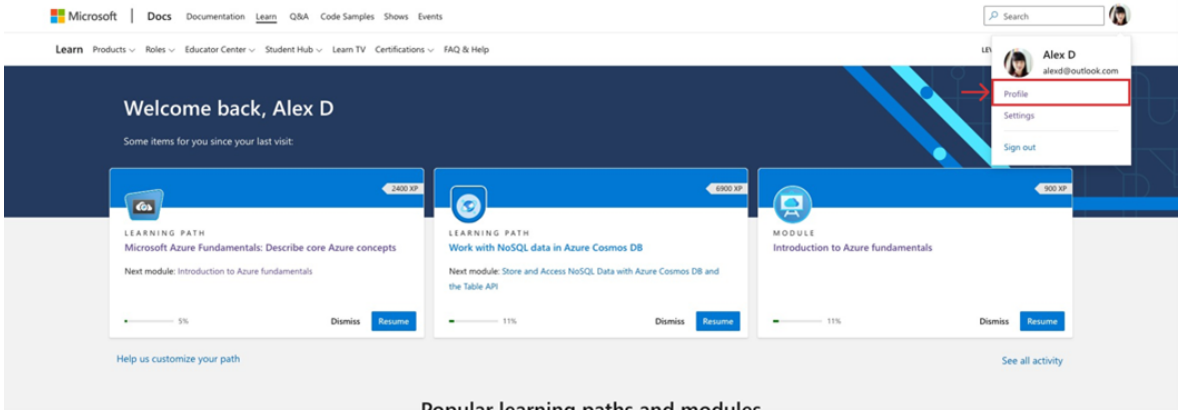
- Complete the system test on the computer you'll be using to take the exam. If your system doesn't pass the system test, it will likely fail during the exam. We recommend taking the exam at a test center instead.
- Take a clear photo of your identification documents. This step is required for validating your identity at the time of testing. If the photo isn't clear, the proctor won't allow you to take the test. There are no exceptions to this rule.
- Review the testing protocol to know what to expect during the exam. Understand the video and audio monitoring requirements. If you have concerns about the online testing protocol, we recommend that you schedule your exam at a test center.
- We're committed to ensuring everyone who's interested in taking Microsoft Certifications can do so in a way that's fair and accurately reflects their skills. If you use assistive technologies, you must request an accommodation to use them during the exam.

To register for an online proctored exam, visit: Register and schedule an exam.

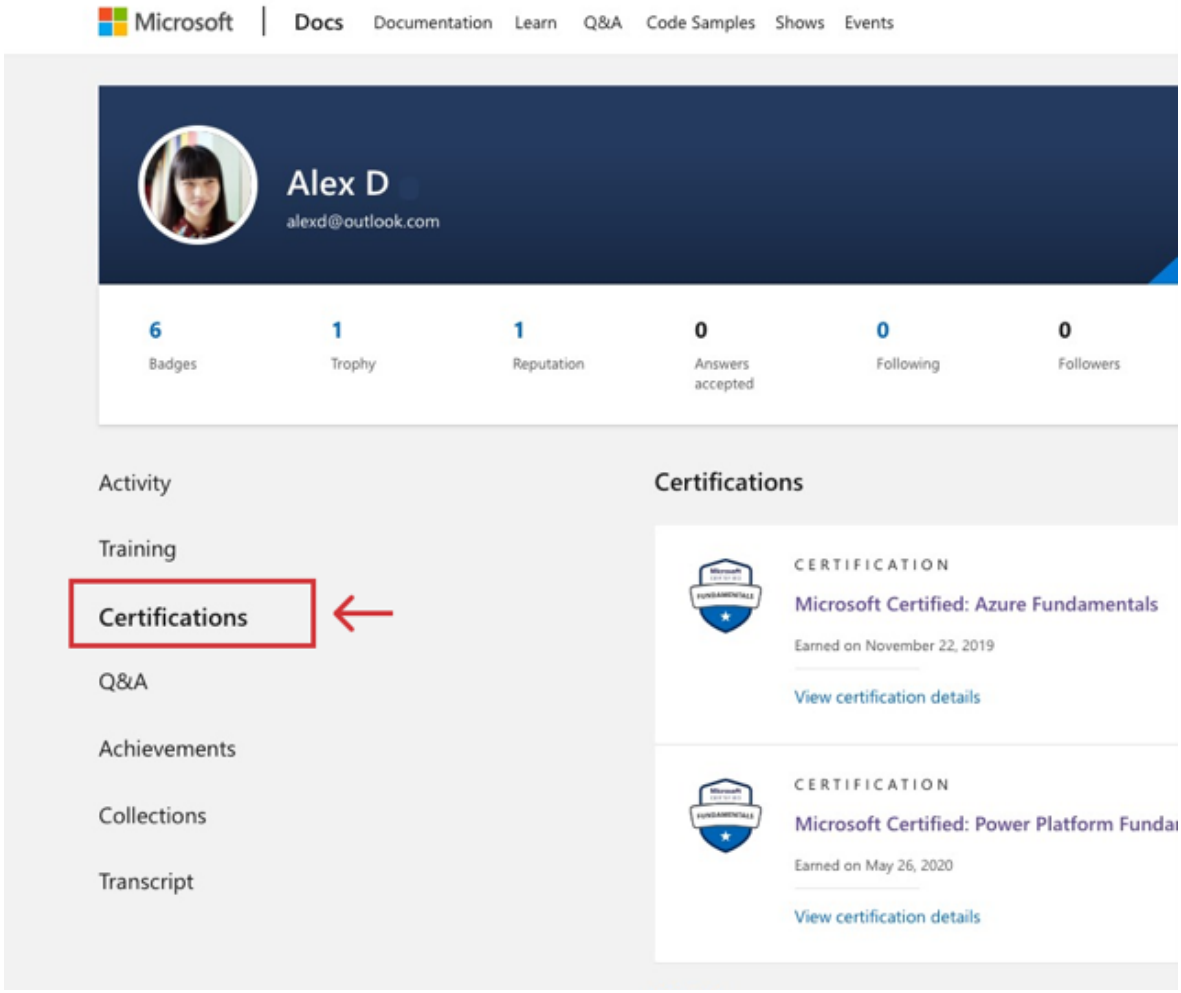
How to start an online proctored exam

We recommend logging in 15 minutes early to start the check-in process.

1. Sign into Microsoft Learn with the personal Microsoft account (MSA) associated with your Microsoft certification profile.
2. Click on your photo avatar and select *"Profile."*



3. Select *"Certifications"* in the profile navigation menu.



4. Your appointments will be listed at the top of the screen. Find the exam appointment you wish to start and select the *"Go to the exam"* button on the

appointment screen. 
5. Follow the on-screen instructions and download and install the secure browser. For more details, visit: About online exams with Pearson VUE.

About online exams with Pearson VUE

Article • 09/19/2023

Introduction to online proctored exams with Pearson VUE

Microsoft partners with Pearson VUE to deliver online exams to your home or office. A proctor will monitor your exam via webcam and microphone to maintain the integrity of exam results. Learn more about the online proctoring experience by visiting the Pearson VUE site.

Participating countries/regions and supported languages

Online exams are available in most, *but not all*, countries/regions. Many exams are localized into various languages; however, greeter support, proctor support, and proctoring software will be communicated in English (there may be limited Japanese availability) even if your exam is in another language.

Before you register for an online exam

1. If you need special equipment, extra time, or other accommodations during an exam, please request these accommodations before scheduling so we can provide the best experience. Learn how to request an accommodation at Request accommodations.
2. Make sure your computer meets the minimum system requirements by reviewing Pearson VUE's detailed information on what's required. For network administrators who need advanced networking requirements, review the OnVue Technical Requirements for the Candidate.
3. Complete the required system test on the same computer and in the same location you'll be taking the exam to make sure your computer, internet connection, and location are compatible with the OnVUE software requirements.
4. Review the technical tips and testing environment requirements below.
5. Confirm your ID is compliant with Pearson VUE's ID Policy and that the name on your Microsoft Certification profile matches **exactly** the name on the government

issued ID you'll present when you take the exam. To learn more about how to check the name on your certification profile, visit: Manage your certification profile.

6. Explore the exam sandbox to learn more about the exam UI and the different types of questions you may encounter. In addition, review the videos on the Pearson VUE site so that you know how to prepare for your online proctored exam and what to expect during the exam.

Technical tips

Software and permissions

- Make sure the user account you're using to log into your computer has local administrative permissions. For help on enabling administrative permissions, see documentation for Windows and Mac.
- Test on a personal computer rather than a work computer, if possible, as work computers often contain software that prevents OnVUE software from launching.
- You may need to configure your internet security and antivirus software to make an exception for the OnVUE Secure Browser executable file.
- Some antivirus software can cause performance issues. Consider disabling antivirus scanning while taking your exam.
- Make sure your security software won't block the execution of JavaScript, Adobe Air applications, or Adobe Flash Player extensions.

Network

- Online proctored exams can be disrupted by proxy servers, network packet inspection/filtering, or strict network security configurations.
- If possible, use a hard-wired internet connection.

Testing environment requirements

Our policies, practices, and procedures may seem strict, but they maintain the integrity of our online proctored exams. That's what makes your certification so valuable.

Office or home setting

Your office or home must meet the following requirements:

- Your office, conference room, or space must be walled, have a closed door, and be free from disruptions.

- No one else can be in or enter the room during your exam.

Communicating with the greeter and proctor

- **Phone:** during the check-in process, the greeter will ask for your phone number in case they need to call. After you've completed check-in, place your phone out of reach but close enough to be heard in case the proctor calls you.
- **Chat window:** Most communication with the greeter and proctor will be in the chat window.
- **Microphone:** During the check-in process and, if necessary, while taking your exam, you can communicate with the greeter and proctor via microphone.
- **Language:** Please note that your greeter and proctor may not know your preferred language even if your exam is available in that language.

Identity verification

You must present a current government-issued ID. Refer to the Pearson VUE *Before test day* page and click *"View ID requirements"* for acceptable examples.

- Use your mobile phone to capture the required headshot and ID.
- The name on the government issued ID you present must **exactly** match the name on your Microsoft Certification profile. See Manage your certification profile.
- If you're in the process of updating or renewing your identification, please note that legal name-change forms, including ID renewal forms, are not accepted for online proctored exams.

Exam area scan

- Prior to the exam, unplug any additional monitors and turn them away from you. Turn off any other computers in the area as well.
- The work area should be clear of all materials. Please keep the following items out of arm's reach:
  - Books
  - Notepads
  - Post-it notes
  - Typed notes/papers
  - Writing instruments such as pens, markers, whiteboards, or pencils.
- Use a mobile phone to capture the required exam area photos. If no phone is available, a webcam can be used.
- Mobile phone photos must be uploaded to launch your exam; a greeter will review them along with your headshot and ID. The greeter will look for security risks and

notify you of issues prior to launching the exam.

No personal belongings

- During the exam, you may not access or use hand-held computers or other electronic devices, pagers, watches, wallets, purses, hats (or other head coverings), bags, coats, books, notes, or any other materials not specifically approved.
- In the event of a support issue, the proctor may contact you on your mobile phone at the number provided during check-in. Please make sure the mobile phone number in your profile includes the country code. It’s okay to keep your cell phone nearby but out of arm's reach.

Clothing

For security and exam integrity, you may be asked to:

- Turn out pockets so the greeter can see they’re empty
- Roll up long sleeves to show there is no writing on your arms.
- Lift a tie to show there’s nothing hidden underneath.
- Pull back long hair back to show there is nothing attached to your ear (such as a Bluetooth earpiece).

No eating, smoking, or chewing gum

- Eating, smoking, and chewing gum are prohibited during the exam unless you have an approved accommodation. An accommodation request is not required to have a beverage present but it must be in a transparent, spill-proof container.

No exam assistance

- You may not receive assistance or coaching from others while taking the exam or allow anyone to view your computer screen during the exam.
- The proctor cannot answer questions related to exam content.

Facial Comparison Policy

- By registering for an online proctored exam, you understand and agree that Pearson VUE may use facial comparison technology to verify your identity by comparing your face to your identification. Facial images captured during the

testing process also help improve the application. If you don't want facial comparison technology to be used, please schedule your exam at a test center.

Recording during the exam

- When taking the exam, you'll be recorded, and the proctor will monitor you by video and audio. Monitoring includes your face, voice, and the room where you are seated during the exam. If you don't wish to be recorded, please notify the proctor immediately and reschedule your exam at a test center.

Candidate conduct requirements

- To maintain the integrity of our exams, we must enforce the following:
  - You may not copy or record questions or answers from the exam.
  - You may not share or discuss the questions or answers in the exam with others.
- If a proctor feels the Candidate Rules Agreement has been broken by a candidate, a candidate is suspected of cheating or tampering with the exam software, or if someone other than a child under 13 is in the exam room, they will terminate the exam and report the infraction to Microsoft, along with audio and/or video evidence. The exam may be invalidated, and Microsoft may decertify and even ban the candidate from the Microsoft Certification Program.

Register for an online exam

For detailed instructions on how to register, visit: Register and schedule an exam.

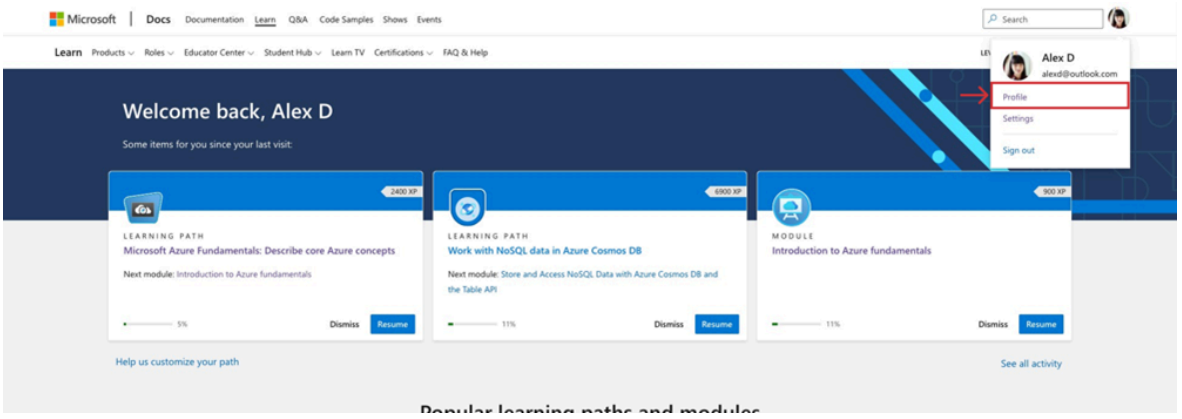
Launching the exam and the check-in process

- The launch and check-in process takes approximately 15 minutes but may take longer depending on your personal computer configuration.
- Before launching your exam, review the OnVUE FAQs for troubleshooting tips and Pearson VUE's guide to online testing.
- On exam day, run the system test again on the equipment and internet connection you'll use during the exam.
- Log onto your computer as an administrator to determine if any background processes are running and stop them. For help on enabling administrative permissions, see documentation for Windows and Mac.
- Turn off browser pop-up blockers.
- Place your mobile phone away from you but within arm's reach in case the proctor needs to contact you.

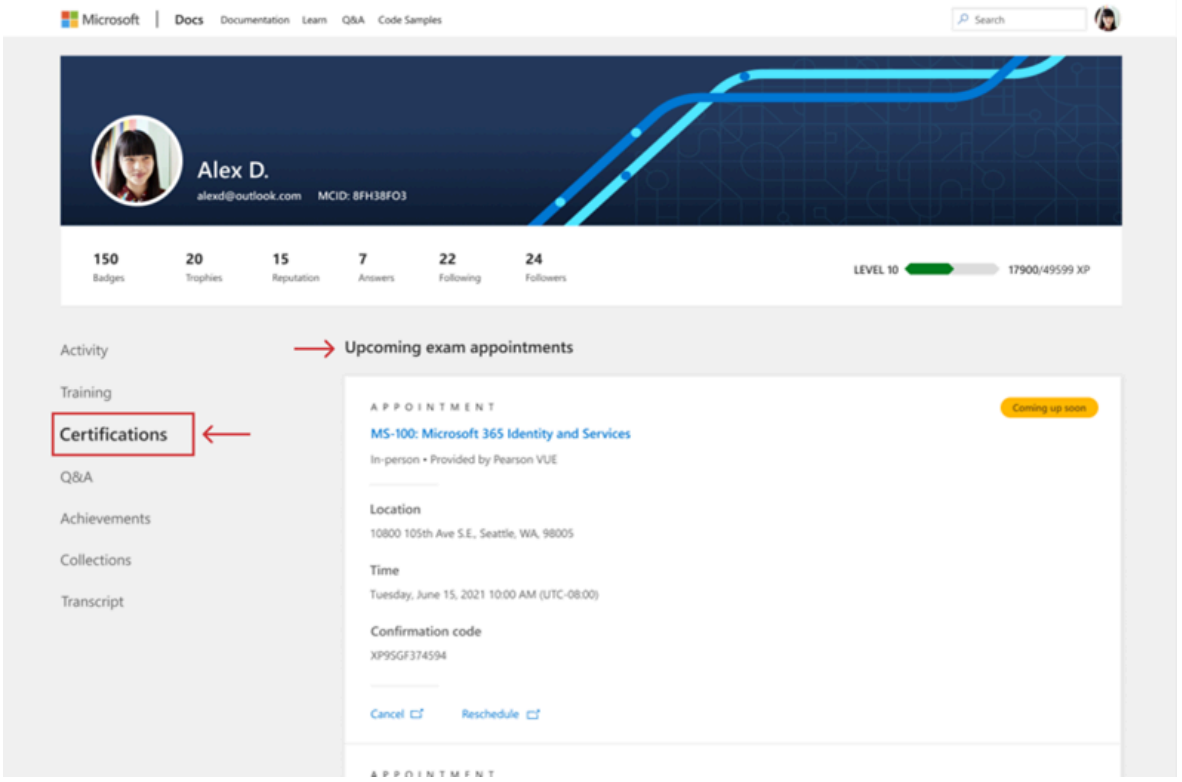
- Ensure your Microsoft Certification profile is updated to include your mobile number, including country code, in case Pearson VUE needs to contact you during the exam.

To begin your testing session and connect with a greeter:

- You can check in from 30 minutes before and up to 15 minutes after your appointment time.
- Sign in to your Learn profile with the Microsoft account (MSA) associated with your Microsoft Certification profile. Click on your Learn profile avatar and select *Profile* from the drop-down menu.



- Choose *Certifications* from the menu inside your Learn profile. (If you can't access your Microsoft Learn profile, try again using an Incognito or InPrivate browser.) If you're still having trouble, open a case with certification support, and a forum moderator will assist.



- Your appointments will appear at the top of the *Certifications* page.

- Select the *"Go to the exam"* link at the bottom of your exam appointment to be taken to Pearson VUE. - Select the exam name under *"Purchased Online Exams"*.
- Select *"Begin exam"* on your dashboard, proceed through the self-check-in process, and wait for your proctor. (Note: you must select *"Begin exam"*, to launch the exam process.)
- Once self-check-in is complete, a greeter verifies your identity, reviews your room scan, and places you in the proctor queue. If the greeter has questions about your ID or room scan, they'll work with you to resolve them before you begin. If they do not have any questions, you'll be placed into the proctor queue
  - Please note: if you haven't heard from a proctor within 30 minutes, we may have lost connection. If this happens, use Pearson OnVUE Support live chat for assistance. (Keep in mind that mobile devices must be out of arm's reach during the testing session.)
- Your proctor won't contact you during the exam unless there's an issue.
  - If there is a technical issue during the exam, the proctor will attempt to contact you via chat. If that doesn't work, they'll contact you by phone.
- If there is an issue after the exam contact Microsoft certification support.

Access your score report

Visit: Exam scoring and score reports

Remove proctor software

When your exam ends, you should remove all executable and ancillary files, including the **Pearson VUE Secure Browser**. To remove the Pearson VUE Secure Browser, please follow the standard application uninstall process for Windows or uninstall process for Mac.

Frequently asked questions (FAQs) about online proctored exams

Article • 09/19/2023

How do I request exam accommodations?

Visit: Request accommodations.

Can I reschedule or cancel my exam?

Visit: Exam reschedule and cancellation policy.

Can you share the latest exam scheduling policy?

You can have a maximum of two Microsoft Certification exams scheduled at a time, either on the same day or on separate days through Pearson VUE. After you take (or cancel) one of these exams, you can register for another. Please note, there are no changes to exam scheduling through Certiport. Learn more about registering and scheduling an exam.

What type of identification is required during the check-in process?

Visit: About online exams with Pearson VUE.

How do I change my legal name on my Microsoft Certification profile?

Visit: Manage your certification profile.

Where can I find a list of exam policies?

Visit: Policies and agreement.

After my exam has launched and I am assigned a proctor, how long do I have to complete the exam?

Visit: Exam duration and exam experience.

What happens after I launch the online proctored exam?

You can expect to submit a photo of your ID and do a room scan. Once complete, you will be assigned a proctor. For more information, visit: About online exams with Pearson VUE.

Can I take a break during an online proctored exam?

Yes. We've added 5 minutes to our exams to allow for unscheduled breaks that don't need to be requested in advance. Visit Unscheduled breaks on exams. If you need more than 5 minutes for breaks, request additional time through our accommodation process.

If I'm taking multiple exams for a certification, do I need to choose a single exam delivery method for all exams?

No, you may mix and match delivery methods (online proctored or in person at a testing center).

Are online exams more difficult than exams taken at test centers?

No, the exams are of equal difficulty no matter which method you choose. Consider which option makes you feel most comfortable during the exam.

May I take notes during my online proctored exam?

Yes, you can take notes during your online exam by using the whiteboard feature. You can access the whiteboard during your exam by selecting the eraser icon at the top of the screen. (You may not use an external whiteboard or pen and paper.) If you'd like to learn more or practice using it, visit: Whiteboard // OnVUE // Pearson VUE.

Are online proctored exams as secure as a test center?

We're committed to protecting the integrity of our exams, regardless of delivery method. When you take an online exam, you'll first install a secure browser that enforces rigorous safeguards throughout the process. In addition, a proctor monitors you throughout the exam via webcam and microphone.

What happens to candidates caught cheating?

We review video of the exam process in cases where we suspect cheating. We're pretty good at detecting cheating, so we don't recommend it—we decertify cheaters, remove their certifications, and ban them from taking future exams.

Are online proctored exams available in multiple languages?

Yes, although proctors may not speak those languages. So, while the exam content may be available in various languages, proctoring and support is generally only available in English or Japanese (availability limited). To read more about language support during online exams, visit: About online exams with Pearson VUE.

If I have technical issues before, during, or after the online proctored exam, who do I contact?

If you run into problems before or after the exam, contact certification support. For questions during your Pearson VUE exam, use Pearson OnVUE Support live chat to contact Pearson VUE's customer service team. (Do not use your mobile phone during an exam.)

What if my phone rings during the exam? Can I answer it?

If your phone rings during the exam, limit your interaction to identifying the caller. If a proctor is contacting you, the number will display as 617-379-0635, and/or caller ID may identify the number as Pearson VUE. If this number or contact appears, please answer the call.

Any mobile phone use other than engaging with a proctor is strictly prohibited and will result in your exam being revoked. If your phone rings and the call is not from Pearson VUE, don't answer it.

If you need to silence your phone after the exam has begun, first alert a proctor, then wait for their acknowledgement to ensure they understand you're accessing your phone only to silence notifications. Once you've silenced your phone, move it out of arm's reach.

Pearson VUE will not text you during your exam. If you receive a text notification, ignore the notification, and continue testing. If an alarm sounds on your phone, first alert a proctor, then wait for their acknowledgement to ensure they understand you're accessing your phone only to silence the alarm. Once you've done so, move your phone out of arm's reach.

Microsoft Applied Skills process overview

Article • 10/25/2023

Why earn a Microsoft Applied Skills credential?

Earning a Microsoft Applied Skills credential demonstrates your proficiency in a specific, scenario-based skill so you can make a bigger impact on every project, at your organization, and in your career.

Getting started with Microsoft Applied Skills credentials

A great place to begin is the credentials overview all of Microsoft credentials. If you already know which credential you want to earn, you can filter and search from the page. To find a complete list of Microsoft's Applied Skills credentials, visit Browse Credentials.

You can learn more about any Microsoft Applied Skills credential by visiting its details page that describes the skills that will be taught as part of the learning path and measured as part of the assessment lab. On the details page, you'll also find information about how to prepare for and how to launch the assessment lab.

Prepare for your Microsoft Applied Skills credential

Start by reviewing the credential details page to understand the skills measured by the assessment lab. If you'd like more preparation, the detail pages will include information about free learning resources on Microsoft Learn as well as the availability of instructor-led training.

Getting your results and credentials

For most Applied Skills credentials, you'll be informed of your results within minutes, but it can take up to 24 hours for results to appear in your Learn profile's Credentials tab.

For more information about Applied Skills results and how to access them, visit Applied Skills scoring and score reports.

Celebrate your success

If you've earned a Microsoft Applied Skills credential, congratulations! Employers and colleagues will recognize your achievement when you share it on professional networks or embed it in your email signature or resume. These credentials and skills are verified by Microsoft, thereby offering a signal of trust that organizations can rely on, giving them full confidence in the authenticity and accuracy of your skills.

It's your time to shine. Learn more about how you can view, use and share certificates and achievements.

Applied Skills assessment lab accommodations

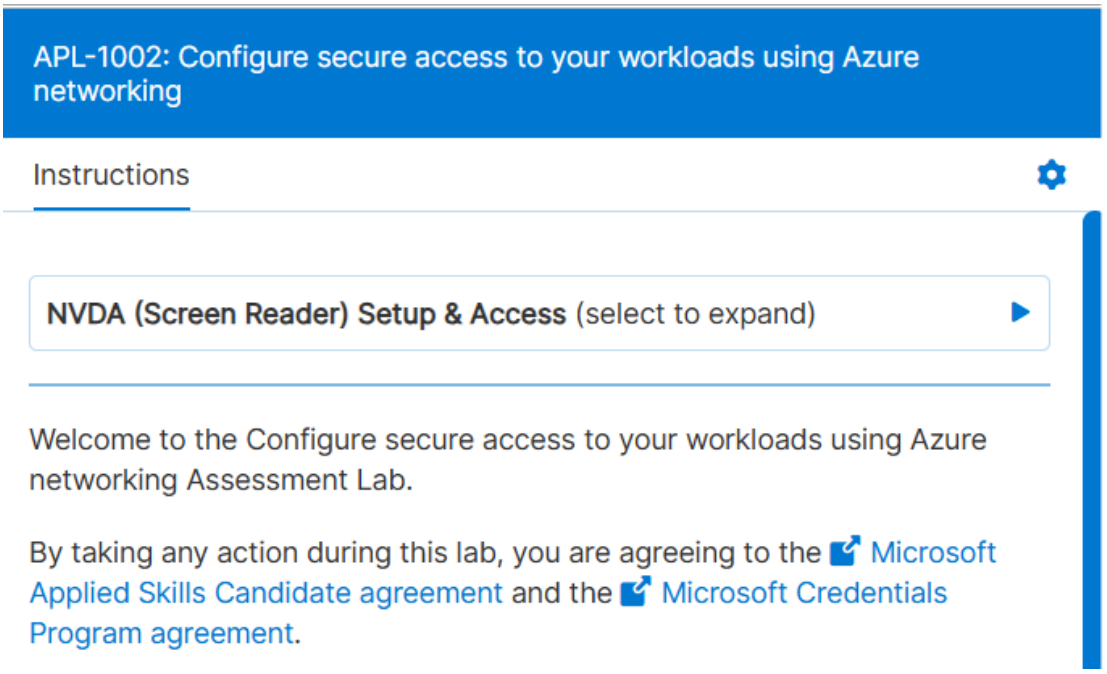
We've designed Applied Skills assessment labs to support candidates while maintaining our high standards.

What types of accommodations are available?

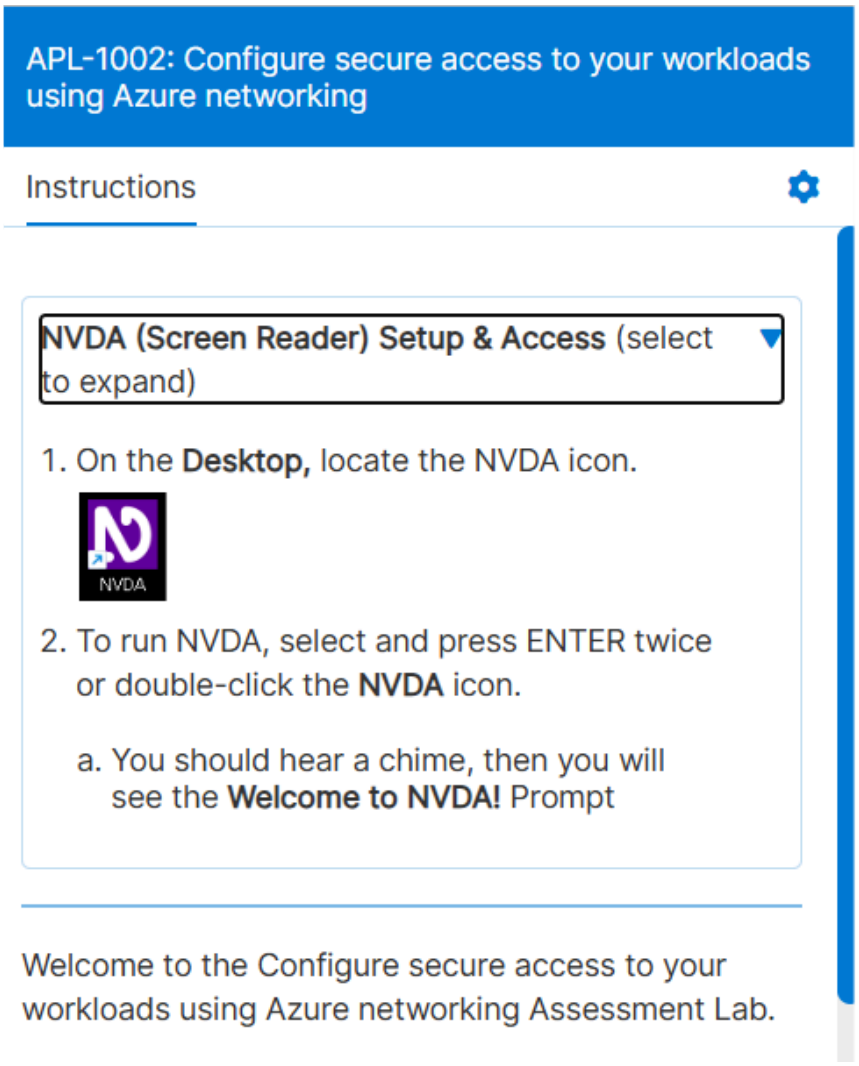
Screen reader availability

For those who need screen readers, you will have access to NVDA during the lab. When you launch the lab, you will need to log into the virtual machine. Expand Step 1: Log into the virtual machine for the Username and Password.

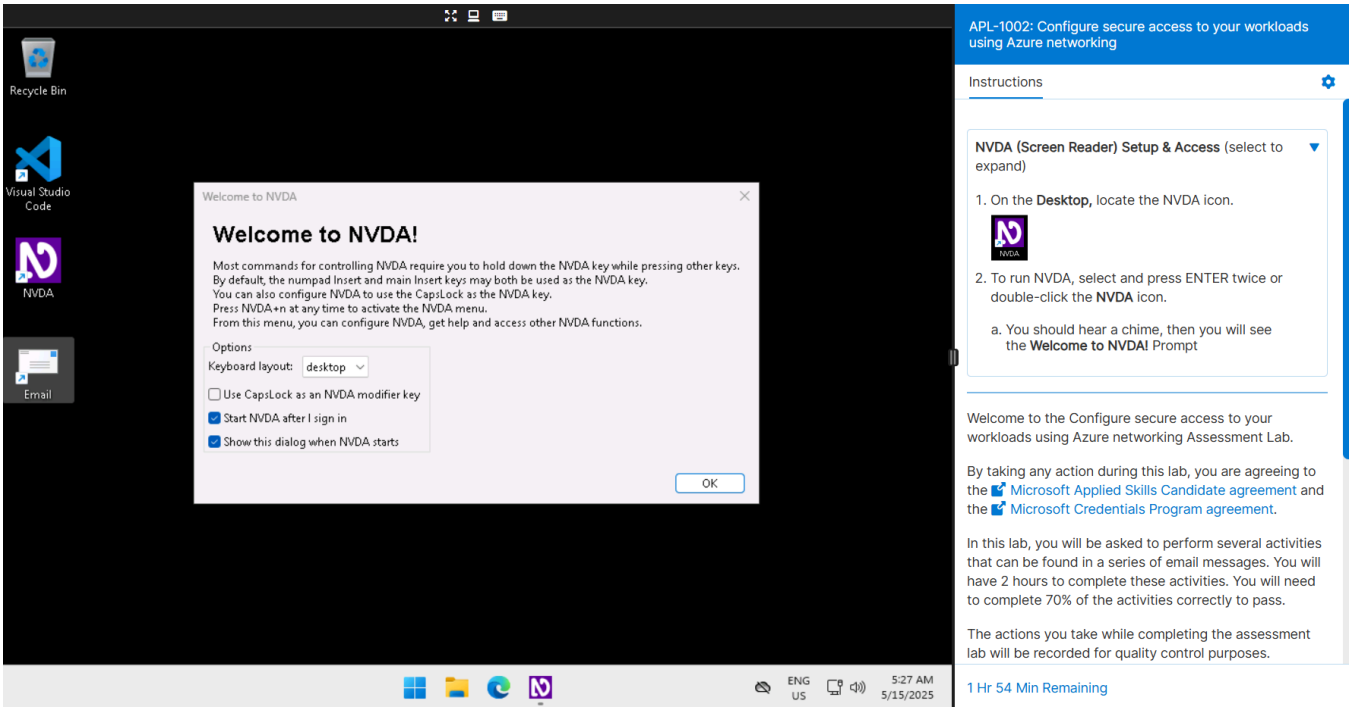
Once you are logged into the VM, you will be able to launch the NVDA screen reader. Instructions are provided after selecting the arrow next to NVDA (Screen Reader) Setup & Access.



Expand the NVDA (Screen Reader) Setup & Access by selecting the arrow. Instructions will appear. Locate the NVDA icon on the desktop. Open NVDA.



After doing so, you'll hear a chime and NVDA instructions.



Extra time

When there are less than 10 minutes remaining, you may extend the time through a pop-up window by clicking **Yes**. The amount of time you can extend the lab will vary depending on the lab. The time you can extend is noted in the pop-up window.

You do not have to request this additional time prior to starting the lab.

Last updated on 11/21/2025

Prepare for Microsoft Applied Skills assessment lab

Article • 04/01/2024

Self-paced training on Microsoft Learn

A list of free online learning paths is available on each credential details page to help you prepare. You can also browse all learning paths and modules based on product (for example, Azure, Microsoft 365, Windows), based on role (such as developer or data engineer), or based on learning level (beginner, intermediate, and advanced).

Microsoft Learn online modules and tutorials are bite-sized, interactive skill builders you complete at your own pace and are available in multiple languages.

Instructor-led training

Find relevant instructor-led courses to prepare for your assessment lab on the credentials detail pages or browse all instructor-led training.. If you are looking for in-depth, structured training, instructor-led training offers dedicated, personal attention from technical subject matter experts.

Online or in-person classes and workshops delivered by Microsoft Certified trainers are centered around up to date ILT course material on Microsoft Learn to help you prepare.

Learn from a Microsoft Certified Trainer

Our worldwide training partner network offers trainer-delivered courses for your team leveraging Microsoft Certified Trainers (MCT). MCTs are best-in-class trainers who deliver Microsoft Official courseware through in-person and hybrid training deliveries. To ensure the best ILT deliveries connect with a training partner today and request an MCT instructor.

Assessment lab duration and lab experience

Most Microsoft Applied Skills assessment labs for a given scenario typically contain 12-16 tasks; however, the number can vary depending on the skill domain being assessed. The number of tasks that need to be completed in an assessment lab is subject to change as we make updates to the lab to ensure it continues to evaluate the relevant skills needed to complete the scenario.

If you are taking a beginner assessment lab, you will have 30 minutes to complete it. If you are taking an intermediate or expert assessment lab, you will have 45 minutes to complete it. In both cases, you will have the ability to request a limited amount of additional time.

What to expect on the lab

The Applied Skills assessment lab gives you the opportunity to demonstrate your skills by completing tasks in the associated technology, such as Azure, Microsoft 365, or Power Platform. You will perform tasks in a virtual environment. The virtual machine is remotely connected to a live environment where you perform tasks on real software and applications.

In the lab, you will be asked to perform several tasks. The guidelines and requirements for completing these tasks can be found in a series of email messages that are accessed through the lab environment. You will complete these tasks using tools, such as the Azure Portal, the Microsoft 365 Admin Center, Azure CloudShell, etc. Unless the email states otherwise, you can complete the task using any method or tool.

It will take a few minutes to load the lab. You may do other activities while it loads. You will NOT be able to save your work and come back later, so plan to complete all the tasks in a single session. The actions you take while completing the assessment lab will be recorded for quality control purposes.

To learn more about the assessment lab experience, watch this tutorial.

Getting started

After the lab launches, start by reviewing the **Instructions**, located in a pane on the right side of the lab environment. These instructions provide important information for accessing and completing the lab. **Step 1** details the lab scenario.

Step 2 provides information on how to access the email messages. To access them, select the "Open Emails" button on the **Instructions** pane. This will open an interface in the lab

environment that simulates an Outlook inbox. Read all the emails before beginning to understand the full scope of what's required in the lab.

Your username and password are provided in **Step 3** of the **Instructions**. To log into the associated technology (e.g., Azure, Microsoft 365 admin console, etc.), simply select the username, and it will automatically complete the username field. Do the same for your password after entering your username.

In the **Troubleshooting** section of the **Instructions** pane, you will find key tips for navigating the lab environment.

Microsoft now requires Multi-Factor Authentication (MFA) to access administrative portals that are required to complete some Applied Skills assessment labs. To meet this requirement, we have created a process that meets the MFA requirements without requiring learners to have a mobile device. Instructions are provided in the lab, but if you'd like to familiarize yourself with them, you can find them here.

Submitting your work

After you have completed **all** the tasks in the lab, select the "Submit Assessment" button to submit your work for scoring. You will be asked to confirm that you really want to leave the lab. Selecting "Yes" will end the lab section, and your work will be scored. It will take a few minutes to evaluate your work after you submit it for scoring.

After you leave a lab, you will not be able to return to it because scoring starts (in the background) as soon as you exit a lab.

Assessment lab scoring and score reports

Article • 04/17/2025

Score needed to pass assessment labs

The score needed to pass an assessment lab will vary depending on the difficulty of the lab in relation to the skills of the target audience. Because labs include a mix of easy (those tasks that someone in the target audience who has the prerequisite skills and experiences should be able to perform) and more difficult tasks (those tasks that someone in the target audience are less likely to perform correctly), the passing score will vary from lab to lab. As we update the labs, the number of easy and difficult tasks may change over time; this, too, will affect the passing score.

How assessment labs are scored?

Labs are scored based on how many tasks are performed correctly. In most cases, each task is worth one point. If you complete it correctly, you will earn the point; if you don't you will not earn the point. The number of points earned based on your task level performance are summed together and compared to the number of points required to pass. If you earned at least that number of points, you will pass the assessment lab.

The tasks are scored based on the result, not how you performed the task. You can accomplish the tasks in any way that you would like (for example, through the UI or using PowerShell commands) unless explicitly stated in the email. Complete the task as you normally would; the scoring script evaluates the result based on the key characteristics to determine if it was performed correctly. For example, if the task was to add a user, the scoring script ensures that you added that user regardless of if you used the UI or PowerShell commands to accomplish that task.

When to expect your score?

For most assessment labs, you should have results within minutes of finishing the lab, including your pass/fail status and feedback on your performance at the subskill level. This information will be available in your Learn profile. If a result doesn't appear in your profile within 24 hours, please contact Support.

How to access your score report?

Score reports, including those passed and failed, are available on the Applied Skills credential details page where you completed your assessment.

Understand an assessment lab score report

The score report provides:

- Pass/fail status
- A chart showing performance on each skill area assessed
- Recommended options for additional learning

The chart shows your performance for each skill area. Shorter bars indicate weakness, longer bars show strength. The chart is not intended to indicate the number of tasks performed correctly, either within a specific section or across the assessment.

What to do if you fail an assessment lab?

If you fail an assessment lab, don't worry. You can retake it. To learn more, visit: Applied Skills retake policy.

To prepare for a retake, review the strengths or weaknesses revealed on your score report. Practice the skills where your performance was weak. You can also review lab assessment preparation resources on the Applied Skills credential details page and the Prepare for Applied Skills assessment lab page.

When you're ready to retake the assessment lab and comply with the retake policy, visit the credential details page and launch the lab.

Why can't you tell me which tasks I passed and which I failed?

Microsoft Applied Skills assessment labs are designed to validate your skills in various technologies and scenarios; they are not designed for learning purposes. Qualified candidates will be able to pass this assessment lab regardless of the tasks they are asked to perform; if they have the skill being assessed, they should be able to perform the required tasks to demonstrate that skill.

In addition, to protect the integrity and fairness of the certification process, Microsoft does not share information about the specific tasks that were performed incorrectly. Sharing details about incorrect tasks could compromise the integrity of the Applied Skills credential, making it easier for future candidates to anticipate and prepare for specific tasks rather than demonstrating their overall competency.

Finally, the assessment labs aim to evaluate your ability to apply knowledge and skills in a comprehensive manner. Providing feedback on individual tasks might lead to a narrow focus on specific areas, rather than encouraging a well-rounded understanding and application of the skill being assessed.

Use the information provided in this report to focus your study efforts on areas of weakness. If you gain experience in those areas, your skills will improve.

How can I improve my performance?

Prioritize the skills you should practice:

- Start by reviewing the recommended learning path provided on the credential details page.
- Next, practice skills in the content areas where you had the weakest performance. Improving or maintaining these skills is important in passing this assessment lab.
- Finally, honestly evaluate your skills against all tasks measured and practice those tasks that you believe are your weakest.

Methods to help improve your skills:

- Explore the learning path provided in the “Prepare for the assessment” section on the credentials details page for this assessment lab.
- Leverage the study guide provided in the "Applied Skills Resources" section on the credential details page.
- Perform tasks listed in the “Evaluated on this assessment” section of the credential details page. Note any challenges that you encounter and keep practicing. Hands-on experience performing these tasks is essential to passing this assessment lab.
- Ask others how they perform those tasks. Do they perform the task differently? Understand why they do.
- Search authoritative sources, such as technical documentation.

The **most common mistake** learners make when completing the assessment labs is not reading the instructions and emails carefully. Every email contains information you need to perform the tasks correctly and where to perform it. If you don’t perform the task as expected or if you do not complete it in the VM, it will not be scored. These labs have been thoroughly tested by hundreds of people so inaccurate scoring, missing files, features, or functionality are extremely unlikely. Review the learning path, get as much practice as possible, and read the emails and instructions carefully before retaking the assessment lab.

Applied Skills frequently asked questions

Are Applied Skills credentials replacing role-based Certifications?

No. Applied Skills credentials are not replacing Certifications. We are expanding our credentialing portfolio to better meet the needs of our learners and customers by allowing people to validate very specific skills sets with this new offering.

Certifications are role based and evaluate a wider range of skills needed to be successful in critical roles that organizations need to be successful in today's rapidly changing technical environment.

Applied Skills credentials are scenario based and evaluate a narrower skill set that is specific to a critical business problem or challenge that organizations are facing.

How do I choose between a Certification and an Applied Skill credential?

If you are looking to demonstrate that you have the range of skills needed to be successful in a given job role, a Certification is the right way to go. If you want to validate your skills on a specific business problem or scenario that your organization is facing, an Applied Skills credential will make more sense.

Here are some key differentiators between Certifications and Applied Skills:

- **Breadth of skills** validated: Certifications typically validate 4-6 skill sets while Applied Skills validate one specific skill set.
- **Focus:** Certifications are job role based while Applied Skills are product-based.
- **Purpose:** Certifications are intended to validate skills needed for the technical aspects of job roles that leverage Microsoft solutions and technologies while Applied Skills are intended to validate specific scenarios that may be hindering an organization's digital transformation goals.

Will attaining an Applied Skills credential help me pass a Certification exam?

Many of the Applied Skills credentials can be used to help you prepare for Certification exams. Because Applied Skills are awarded based on performance within a lab, that experience may set you up for success on a Certification. All role-based Certification exams require experience, so earning an Applied Skills credential is one way to get some of the experience that is needed to pass the exam. However, not all skills assessed on a Certification exam will have an associated Applied Skills assessment lab, so you should not rely on Applied Skills alone. Visit how to prepare for a Certification exam.

I already have a role-based Certification. Should I pursue an Applied Skills credential?

If you want to demonstrate that you have skill sets that were not assessed by the Certification, are Certification "adjacent," or our needed for a specific project that you would like to do or are working on, then an Applied Skill credential would be a great way to show your employer and peers that you have those skills as well as the skills validated by your Certification.

I'm just getting started on my Microsoft credentialing journey. What should I pursue first? An Applied Skills credential, a fundamentals Certification, or a role-based Certification?

It depends on your technical expertise and why you want to earn a Microsoft credential.

If you are exploring technology or just beginning your learning journey in technology, starting with a fundamentals certification makes the most sense because it focuses on ensuring that you have the foundational knowledge you need to get started in technology.

If you have some experience and want to explore the different ways Microsoft technologies and solutions are used to solve critical business problems, an Applied Skills credential is a great way to get started validating real world skills focused on specific projects or scenarios.

If you have some experience and are pursuing a job that leverages Microsoft solutions, a role-based certification is the logical solution to validate role-based skills. Note that some Applied Skills credentials are related to our certifications and may provide another way to prepare for a certification exam.

Check out the Choose your Microsoft Credential guide to help you decide.

If you have other questions about Applied Skills credentials, visit Assessment lab frequently asked questions.

Microsoft Applied Skills Sweepstakes Official Rules

08/26/2025

Applied Skills + Certifications = a powerful combination.

Microsoft Applied Skills validate your ability to complete real-world tasks using Microsoft technologies. These focused, flexible micro-credentials help you build job-ready skills and support your journey to earn role-based certification.

Pass a Microsoft Applied Skills assessment and complete the sweepstakes entry form between August 25, 2025 to October 13, 2025 for a chance to receive a 50% discount Microsoft Certification voucher (below sweepstakes terms and conditions apply).

Steps to enter

1. Review the sweepstakes terms and conditions on this page.
2. Complete an available assessment and earn a Microsoft Applied Skills credential within the sweepstakes timeframe.
    - You can learn more about Microsoft Applied Skills on the homepage, and review all currently available assessments in the official collection.
    - If you want more information on how to earn a Microsoft Applied Skills credential, review the frequently asked questions.
3. Complete the sweepstakes entry form.
4. If you're selected as a winner of one of the **15,000, 50% discount certification exam vouchers**, you will be contacted by Pearson Vue via email with your voucher code, along with the steps on how to redeem. Those steps can also be found on the 'How to redeem your prize' page.
    - Discount certification exam voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue.
    - Discount certification exam voucher **is not eligible** for any GitHub certification exams.

After reviewing the official rules, if you have more questions, please consult the FAQ.

Sweepstakes terms and conditions

1. SPONSOR

These Official Rules (“Rules”) govern the operation of the Microsoft Applied Skills Sweepstakes (“Sweepstakes”). Microsoft Corporation, One Microsoft Way, Redmond, WA, 98052, USA, is the Sweepstakes sponsor (“Sponsor”).

2. DEFINITIONS

In these Rules, "Microsoft", "we", "our", and "us" refer to Sponsor and “you” and "yourself" refers to a Sweepstakes participant, or the parent/legal guardian of any Sweepstakes entrant who has not reached the age of majority to contractually obligate themselves in their legal place of residence. By entering you (your parent/legal guardian if you are not the age of majority in your legal place of residence) agree to be bound by these Rules.

3. ENTRY PERIOD

The Sweepstakes starts at 12:00 AM (00:00) UTC on August 25, 2025, and ends at 11:59 PM (23:59) UTC on October 13, 2025, (“Entry Period”) and will consist of the following Prize Periods (each a “Prize Period”).

Expand table

Prize Period	Start Date/Time	End Date/Time
1	August 25, 2025 at 12:00 AM UTC	September 1, 2025 at 11:59 PM UTC
2	September 2, 2025 at 12:00 AM UTC	September 8, 2025 at 11:59 PM UTC
3	September 9, 2025 at 12:00 AM UTC	September 15, 2025 at 11:59 PM UTC
4	September 16, 2025 at 12:00 AM UTC	September 22, 2025 at 11:59 PM UTC
5	September 23, 2025 at 12:00 AM UTC	September 29, 2025 at 11:59 PM UTC
6	September 30, 2025 at 12:00 AM UTC	October 6, 2025 at 11:59 PM UTC
7	October 7, 2025 at 12:00 AM UTC	October 13, 2025 at 11:59 PM UTC

Entries will be eligible for the Prize period in which they are received, and non-winning entries will be carried over to subsequent Prize Periods. Entrants only need to enter once to be included for all future prize periods, as non-winning entries are carried over to subsequent drawings.

4. ELIGIBILITY

To enter, you must be 18 years of age or older. If you are 18 years of age or older but have not reached the age of majority in your legal place of residence, then you must have consent of a parent/legal guardian.

Employees and directors of Microsoft Corporation and its subsidiaries, affiliates, advertising agencies, and Sweepstakes Parties are not eligible, nor are persons involved in the execution or administration of this promotion, or the family members of each above (parents, children, siblings, spouse/domestic partners, or individuals residing in the same household). Void in Cuba, Iran, North Korea, Sudan, Syria, Region of Crimea, Russia, and where prohibited.

5. HOW TO ENTER

No Purchase Necessary.

To enter, you must complete and earn a Microsoft Applied Skills credential between the dates of August 25, 2025 at 12:00 AM UTC (00:00) to October 13, 2025 at 11:59 PM UTC (23:59). All currently available and eligible Microsoft Applied Skills credentials can be found within the official collection.

After earning a Microsoft Applied Skill credential within the established timeframe, you must visit https://aka.ms/EnterMicrosoftAppliedSkillsSweepstakes to complete an official entry form. For doing this, you will receive one (1) entry into the corresponding weekly Prize Period drawing. There is a limit of one (1) entry per person overall. If you are not selected in the corresponding weekly Prize Period drawing, your entry will be rolled over into the next Prize Period drawing, up until the end of the sweepstakes.

If you would like to be removed from the Microsoft Applied Skills sweepstakes and have your personal data deleted, please email us at msappliedskillssweepstakes@microsoft.com. This request must be sent from the email address you provided at registration. We will delete your personal data within seven (7) business days. This action is limited to this contest and will have no impact on other Microsoft applications. Please see the Microsoft Privacy Statement for information on broader privacy requests.

Any attempt by you to obtain more than the stated number of entries by using multiple/different accounts, identities, registrations, logins, or any other methods will void your entries, and you may be disqualified. Use of any automated system to participate is prohibited.

We are not responsible for excess, lost, late, or incomplete entries. If disputed, entries will be deemed submitted by the "authorized account holder" of the email address, social media account, or other method used to enter. The "authorized account holder" is the natural person assigned to an email address by an internet or online service provider, or other organization responsible for assigning email addresses.

6. WINNER SELECTION AND NOTIFICATION

Pending confirmation of eligibility, potential prize winners will be selected within seven (7) days following each Prize Period by Microsoft or their Agent in a random drawing from among all eligible entries as follows:

Expand table

Prize Period	Number of Winners
1	3,000
2	1,500
3	1,500
4	1,500
5	1,500
6	3,000
7	3,000

Winner email addresses will be shared with Pearson Vue for voucher fulfillment. Vouchers are issued by MindHub Pro by Pearson VUE (privacy statement available here). Winners will receive an email from 'MindhubPro by Pearson VUE' with a digital code to download their prize. If a selected winner cannot be contacted, is ineligible, or fails to claim a prize, the selected winner will forfeit their prize and an alternate winner will be selected time allowing. If you are a potential winner and you are 18 or older but have not reached the age of majority in your legal place of residence, we may require your parent/legal guardian to sign all required forms on your behalf. Only three alternate winners will be selected, after which unclaimed prizes will remain unawarded.

7. PRIZES

The following prizes will be awarded:

15,000. Each winner will receive a 50% discount exam voucher. Approximate Retail Value (ARV) $0.00.

Certification codes expire on **March 30, 2026**, so exam(s) **must be booked and completed before this date**.

50% discount exam voucher **is eligible** for all Microsoft Certification exams offered through Pearson Vue. Discount voucher is **not eligible** for GitHub Certification exams.

The total Approximate Retail Value (ARV) of all prizes: **$0.00**.

We will only award one (1) prize per person overall. No more than the stated number of prizes will be awarded. No substitution, transfer, or assignment of prize permitted, except that Microsoft reserves the right to substitute a prize of equal or greater value in the event the offered prize is unavailable. Microsoft products awarded as prizes are awarded "AS IS" and

WITHOUT WARRANTY OF ANY KIND, express or implied (including any implied warranty of merchantability or fitness for a particular purpose); you assume the entire risk of quality and performance, and should the prizes prove defective, you assume the entire cost of all necessary servicing or repair. This is so even if the Microsoft product mentions a warranty on its packaging, in a manual, or in marketing materials; no warranty applies to Microsoft products awarded as prizes.

Microsoft does not give any warranty of any kind, express or implied (including any implied warranty of merchantability or fitness for a particular purpose) on products made by a company other than Microsoft that are awarded as prizes. Please contact the manufacturer to see if it is covered by that company's warranty.

Prizes will be sent no later than 7 days after winner selection. Taxes on the prize, if any, are the sole responsibility of the winner, who is advised to seek independent counsel regarding the tax implications of accepting a prize. By accepting a prize, you agree that Microsoft may use your entry, name, image and hometown online and in print, or in any other media, in connection with this Sweepstakes without payment or compensation to you, except where prohibited by law.

8. ODDS

The odds of winning are based on the number of eligible entries received.

9. GENERAL CONDITIONS AND RELEASE OF LIABILITY

To the extent allowed by law, by entering you agree to release and hold harmless Microsoft and its respective parents, partners, subsidiaries, affiliates, employees, and agents from any and all liability or any injury, loss, or damage of any kind arising in connection with this Sweepstakes or any prize won.

All local laws apply. The decisions of Microsoft are final and binding.

We reserve the right to cancel, change, or suspend this Sweepstakes for any reason, including cheating, technology failure, catastrophe, war, or any other unforeseen or unexpected event that affects the integrity of this Sweepstakes, whether human or mechanical. If the integrity of the Sweepstakes cannot be restored, we may select winners from among all eligible entries received before we have to cancel, change or suspend the Sweepstakes.

If you attempt or we have strong reason to believe that you have compromised the integrity or the legitimate operation of this Sweepstakes by cheating, hacking, creating a bot or other automated program, or by committing fraud in any way, we may seek damages from you to the full extent of the law and you may be banned from participation in future Microsoft promotions.

10. USE OF YOUR ENTRY

Personal data you provide while entering this Sweepstakes will be used by Microsoft and/or its agents and prize fulfillers acting on Microsoft's behalf only for the administration and operation of this Sweepstakes and in accordance with the Microsoft Privacy Statement.

11. GOVERNING LAW

This Sweepstakes will be governed by the laws of the State of Washington, and you consent to the exclusive jurisdiction and venue of the courts of the State of Washington for any disputes arising out of this Sweepstakes.

12. WINNERS LIST

Send an email to Microsoft Applied Skills Sweepstakes with the subject line "Microsoft Applied Skills Sweepstakes winners" within 30 days of October 13, 2025 to receive a link to a list of winners.

Frequently asked questions

08/26/2025

Applied Skills + Certifications = a powerful combination.

Microsoft Applied Skills validate your ability to complete real-world tasks using Microsoft technologies. These focused, flexible micro-credentials help you build job-ready skills and support your journey to earn role-based certification.

Pass an available Microsoft Applied Skills assessment and complete the sweepstakes entry form between August 25, 2025 to October 13, 2025 for a chance to receive a 50% Microsoft Certification exam voucher.

How do I participate in the Microsoft Applied Skills sweepstakes?

To participate in the Microsoft Applied Skills sweepstakes, you must complete and earn a Microsoft Applied Skills credential and submit an entry form within the sweepstakes timeframe of August 25, 2025 to October 13, 2025.

Steps to enter

1. Review the sweepstakes terms and conditions page.
2. Complete an available assessment and earn a Microsoft Applied Skills credential within the sweepstakes timeframe. You can view all available assessments in the official collection.
3. Complete the sweepstakes entry form.
4. If you're selected as a winner, you will be contacted by Pearson Vue via email with your 50% discount voucher, along with the steps on how to redeem. Those steps can also be found on this page.

    - Discount certification exam voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue.
    - Discount certification exam voucher **is not eligible** for any GitHub Certification exam.

To earn a Microsoft Applied Skill credential, you must have a Microsoft Learn profile. If you do not currently have one that is okay, you can create a free account as you take your Microsoft Applied Skill assessment.

How do I earn a Microsoft Applied Skills credential?

To earn a Microsoft Applied Skill credential, you must have a Microsoft Learn profile. If you do not currently have one that is okay, you can create a free account as you take your Microsoft Applied Skill assessment.

How it works

1. Prepare—Learn at your pace with self-paced learning or instructor-led training taught by Microsoft certified trainers

How can I tell if I've earned a Microsoft Applied Skills credential?

Within your Microsoft Learn profile, go to the Credentials section. Once there, your Microsoft Applied Skill credentials will display under the Applied Skills tab. Make sure the credential was earned in the sweepstakes timeframe of August 25, 2025 (12:00 AM UTC) – October 13, 2025 (11:59 PM UTC).

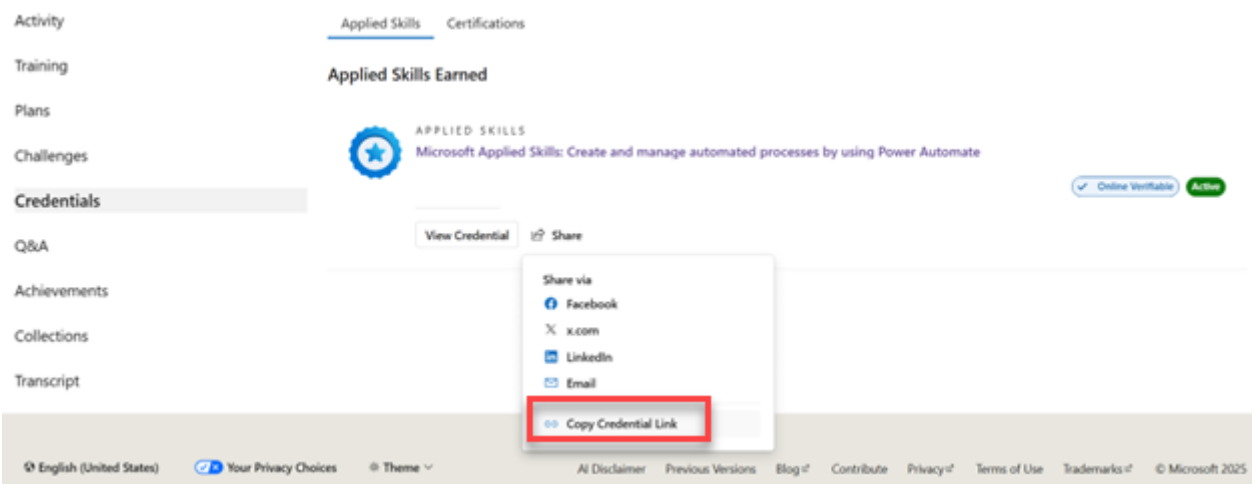
If none are listed, you can browse the available Microsoft Applied Skills assessments in the official collection. above and select one to take.

I've earned my Microsoft Applied Skills credential. Now what?

Once you have earned your Microsoft Applied Skills credential, you can submit an entry for the sweepstakes to earn a 50% discount exam voucher by completing the sweepstakes entry form.

To complete the submission, you will need to provide; (1) your Microsoft Learn **username** (which can be validated here), (2) the email address you would like the discount voucher

code sent to in the event you are a winner, and (3) the Credential Link of the Microsoft Applied Skill that you earned, which can be found in your profile under the Credentials tab when clicking “Share” on the credential (screenshot example below).



Winners will be drawn weekly starting on September 2, 2025 with the last drawing being on October 14, 2025. Winners will be notified within seven (7) days of the drawing if they have been selected. The discount certification exam voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue. It **is not eligible** for any GitHub Certification exam.

To see the complete rules of the sweepstakes, which includes the prize drawing schedule, review the official rules page.

When are winners drawn for the Microsoft Applied Skills sweepstakes?

There will be weekly drawings starting September 2, 2025 with the final drawing being on October 14, 2025. Winners will be notified within seven (7) days of the drawings. Please refer to section three (3), ‘Prize Periods’, of the Microsoft Applied Skills sweepstakes official rules.

How will I be notified if I am a winner of a Microsoft Applied Skills sweepstakes drawing?

Winners will be notified via an email sent to the email address they provided in their Microsoft Applied Skills sweepstakes form submission.

The email will be from ‘MindHub Pro by Pearson VUE’ and will contain the 50% discount certification exam voucher won along with the expiration date and steps on how to redeem.

Emails will be sent within seven (7) days of the applicable Prize Period drawing.

Refer to section six (6), ‘Winner selection and notification’, of the Microsoft Applied Skills sweepstakes official rules for a full breakdown.

How long does the Microsoft Applied Skills sweepstakes run?

The sweepstake runs from August 25, 2025 at 12:00 AM UTC (00:00) to October 13, 2025 at 11:59 PM UTC (23:59).

I am a sweepstakes winner; how long do I have to redeem my prize?

All Microsoft Applied Skills sweepstakes discount certification exam vouchers must be redeemed by **March 30, 2026**.

This means you **must schedule and take** your chosen exam by **March 30, 2026**.

When using your voucher, you will **not** be able to use it for an exam date attempting to be scheduled for beyond **March 30, 2026**.

The discount exam voucher **is eligible** for any Microsoft Certification exams conducted by Pearson Vue. It **is not eligible** for any GitHub Certification exam.

For the full list of rules, please refer to the Microsoft Applied Skills sweepstakes official rules.

How do I redeem my discount Microsoft Certification exam voucher?

Instructions on how to redeem your voucher will be provided in the notification email you received from 'MindHub Pro by Pearson VUE' that also contained your voucher code. You can additionally refer to the 'How to redeem your prize' page.

Discount certification exam voucher **is eligible** for all Microsoft Certification exams conducted by Pearson Vue. It **is not eligible** for GitHub Certification exams.

How to redeem your prize

08/26/2025

Congratulations on being a Microsoft Applied Skills Sweepstakes winner and receiving a 50% discount certification exam voucher! You will have received an email from 'MindHub Pro by Pearson VUE' that contains your voucher code and expiration date.

Note that you **must schedule and take** your chosen exam by **March 30, 2026**. You can review the Microsoft Applied Skills Sweepstakes official rules for the full set terms and conditions.

The discount certification exam voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue. It **is not eligible** for any GitHub Certification exam.

If you have not received an email from 'MindHub Pro by Pearson Vue', validate you've completed these steps.

1. Review the sweepstakes terms and conditions on this page.
2. Complete an available assessment and earn a Microsoft Applied Skills credential within the sweepstakes timeframe. All currently available assessments can be found in the official collection.
3. Complete the sweepstakes entry form.

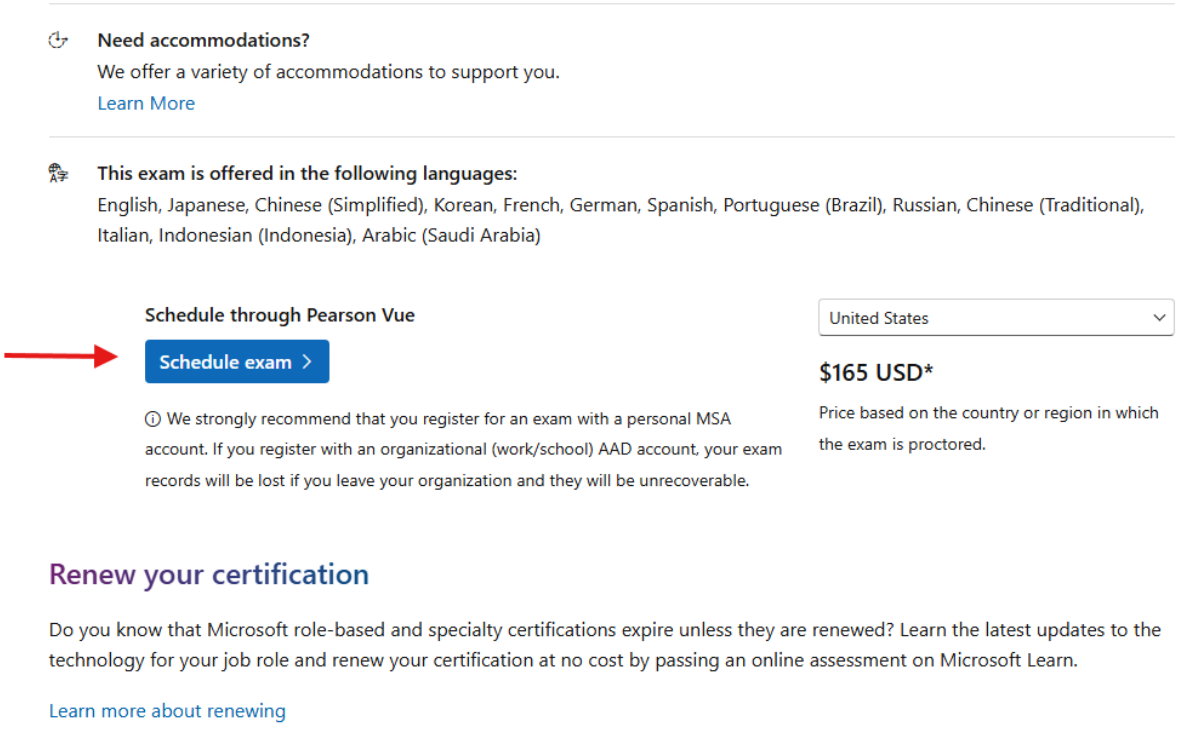
If you have completed the above steps, you may not have been randomly selected as a winner. Review the Microsoft Applied Skills sweepstakes official rules and FAQ for more information.

Steps to redeem

1. Select one of the Microsoft Certification exams that are listed on Microsoft Learn.
   a. Discount voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue.
   b. Discount voucher **is not eligible** for any GitHub Certification exams.

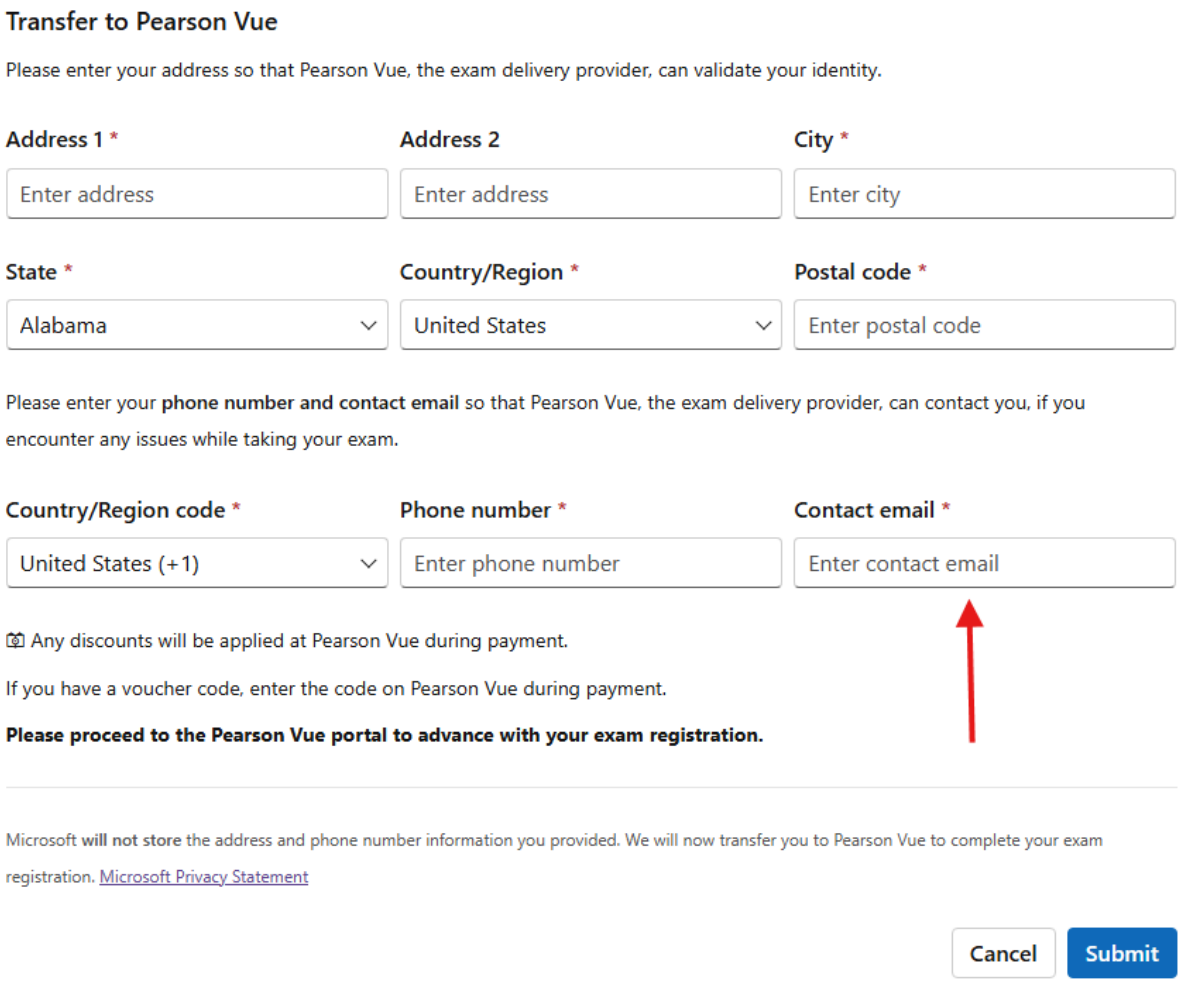
2. Review the exam details, scroll down and click the "Schedule through Pearson Vue" schedule exam button. Some exams may have two options, make sure to select the

Pearson Vue option.

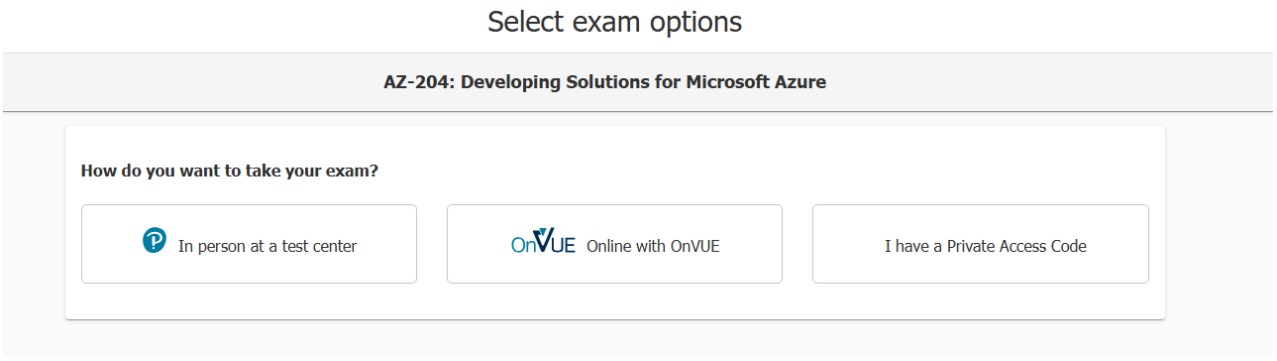


3. If you are not logged in to your Microsoft Learn profile, you will be asked to do so at this point. After doing so, you will be asked to provide additional information for transfer to Pearson Vue. Complete the form and **be sure to provide the same contact email address**

in which you received your voucher code.



4. You will be directed to Pearson Vue and prompted to select how you want to take your exam. Options may vary depending on which exam you have selected. Choose your preference and continue, noting that the voucher code you received **is not** a "Private Access Code".



If you select "In person at a test center", **proceed to step 5**.

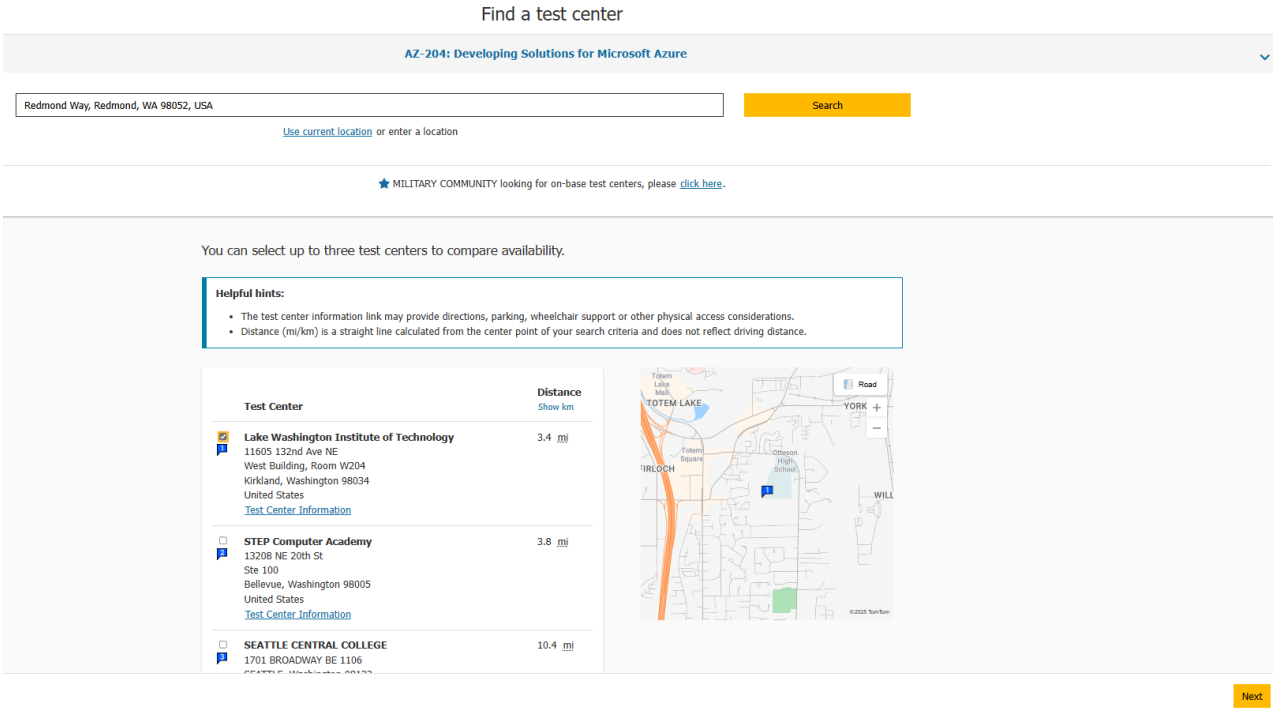
If you select "OnVUE online with OnVUE", **proceed to step 6**.

5. If you have selected to take the exam in person, you will next be prompted to:

a. Select your preferred exam language. Languages provided vary based on exam selected.

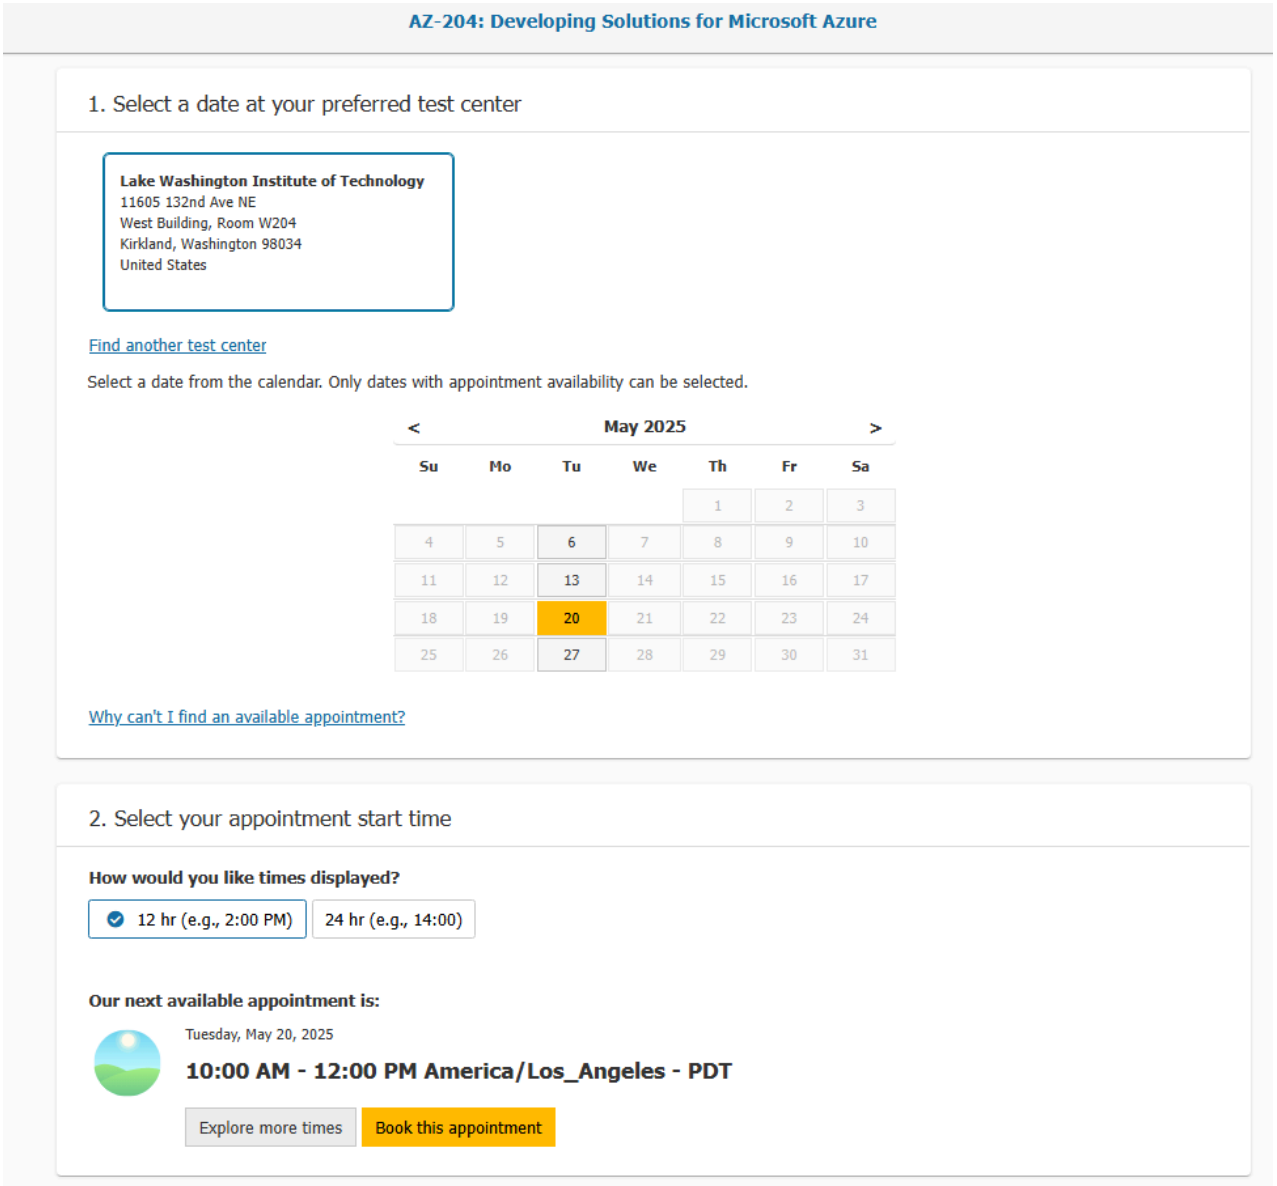
b. Agree to Pearson VUE exam terms and Microsoft Certification terms.

c. Select your preferred testing center.



Testing center options will vary based on your location.

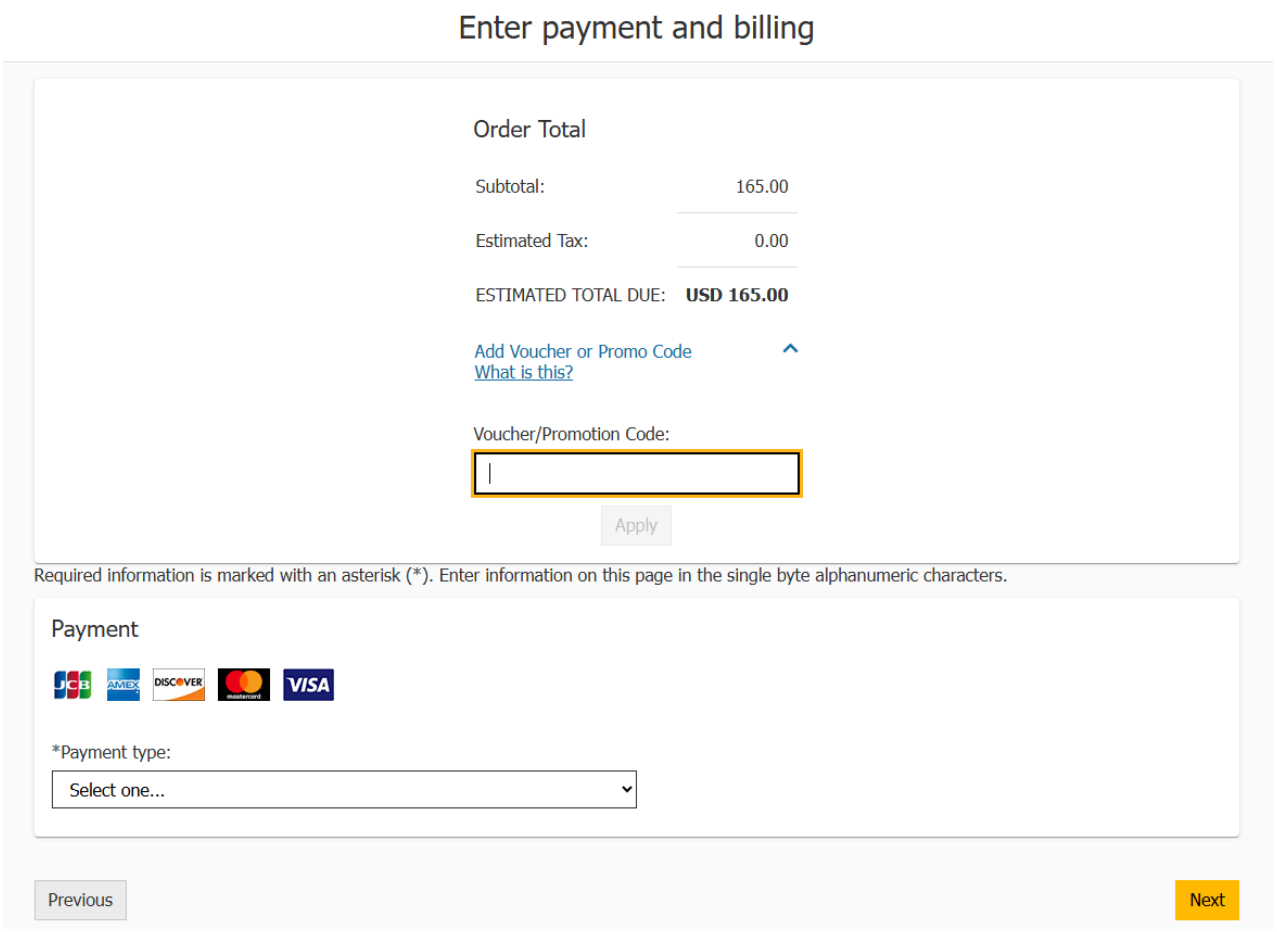
d. Select your preferred exam date and time.



Date and time selected must be before March 30, 2026, to use your voucher. If an exam date beyond March 30, 2026 is selected, you will not be able to apply, the voucher to the cost of the exam.

e. Next you will be asked to confirm your exam scheduled date and contact information. Review and proceed to checkout. **It will still display the cost of the exam—this is expected**, continue to proceed to checkout.

f. In the next screen, you will see an option for Add Voucher or Promo Code. Enter the voucher code you received via email from 'MindPro Hub by Pearson VUE'.

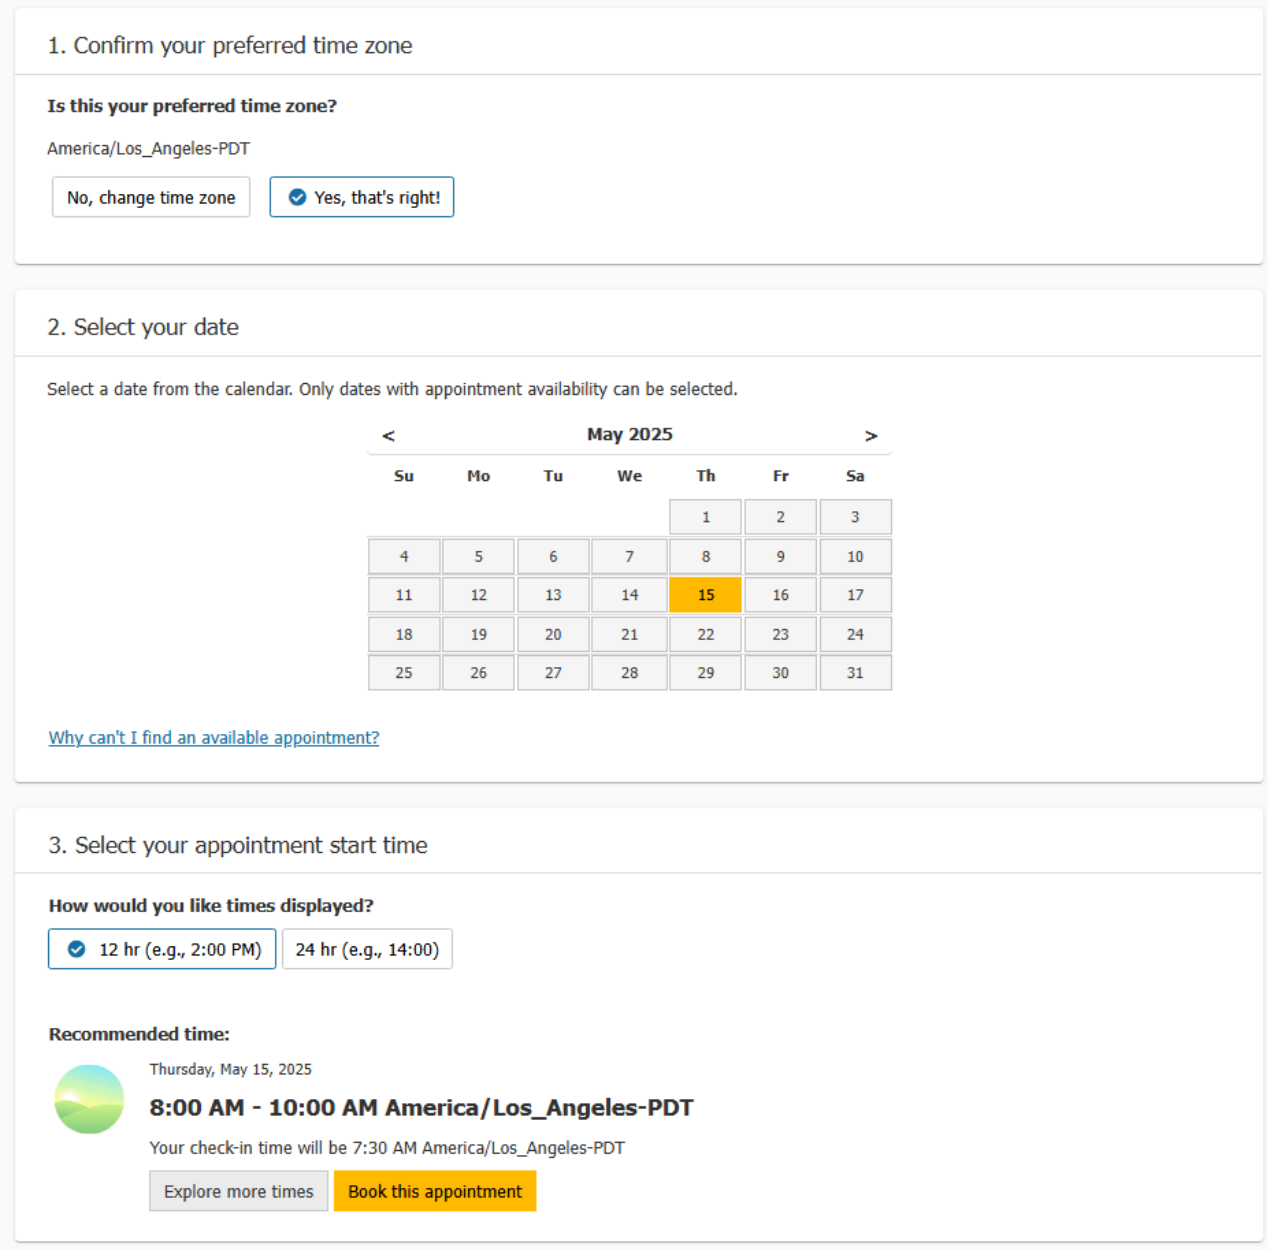


After entering the code, click ‘Apply’ to have it applied to the order, then select ‘Next’ to complete your transaction and schedule your exam!

If you experience any issues attempting to redeem your voucher, please contact mindhubprohelp@pearson.com.

6. If you have selected to take the exam online, you will next be prompted to:

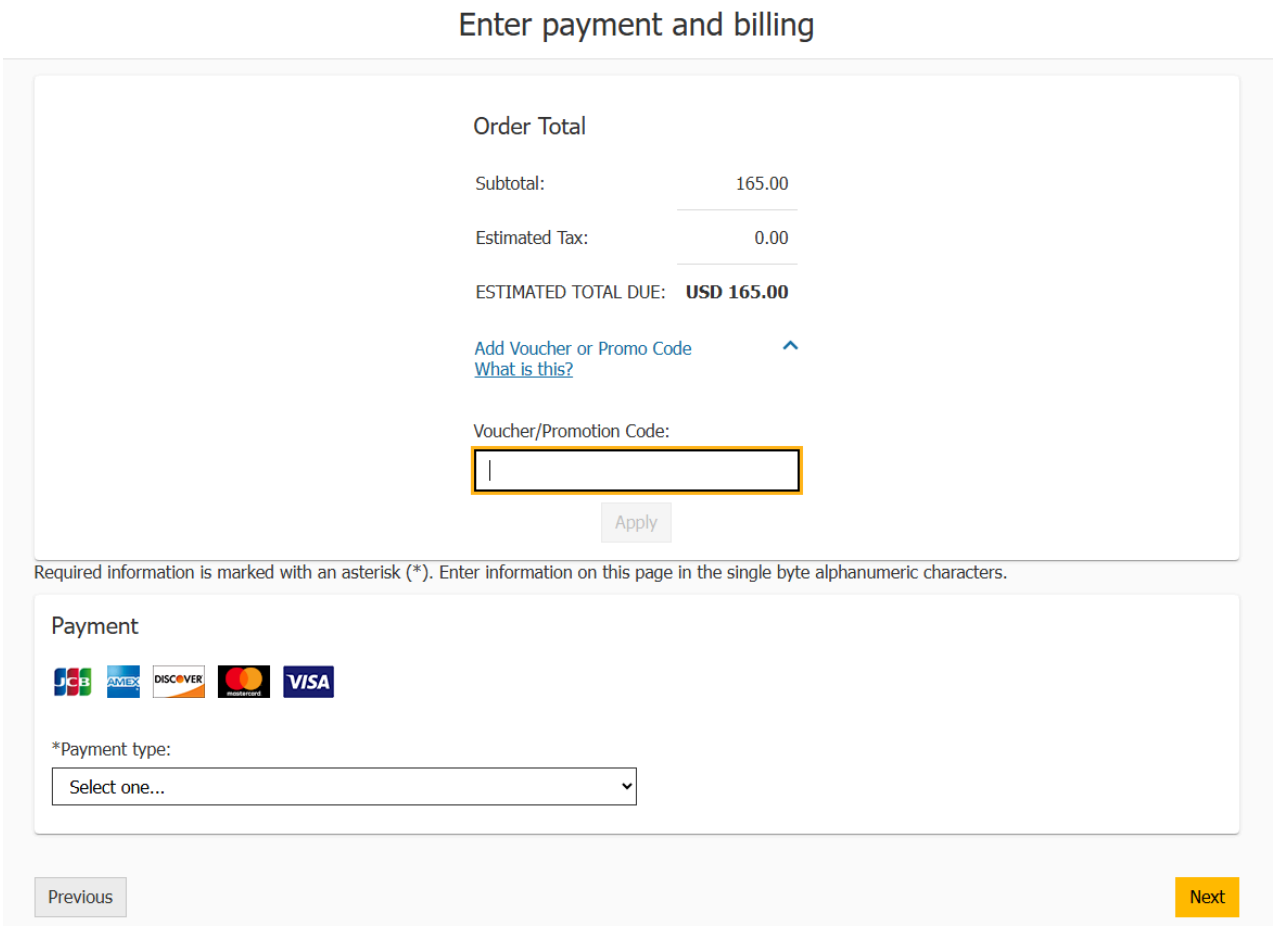
a. Select your preferred exam language. Languages provided vary based on the exam selected.
b. Agree to Pearson VUE exam terms and Microsoft Certification terms.
c. Select your preferred proctor language. Language availability will vary based on exam selection.
d. Confirm your preferred time zone (will default to browser setting), exam date and time.



Date and time selected must be before March 30, 2026 to use your voucher. If an exam date beyond March 30, 2026 is selected, you will not be able to apply the voucher to the cost of the exam.

e. Next you will be asked to confirm your exam scheduled date and contact information. Review and proceed to checkout. **It will still display the cost of the exam—this is expected**, continue to proceed to checkout.

f. In the next screen, you will see an option for Add Voucher or Promo Code. Enter the voucher code you received via email from 'MindPro Hub by Pearson VUE'.



After entering the code, click ‘Apply’ to have it applied to the order, then select ‘Next’ to complete your transaction and schedule your exam!

If you experience any issues attempting to redeem your voucher, please contact mindhubprohelp@pearson.com.

Microsoft AI Agent Skills Sweepstakes Official Rules

1. Sponsor

These Official Rules (“Rules”) govern the operation of the Microsoft AI Agent Skills Sweepstakes (“Sweepstakes”). Microsoft Corporation, One Microsoft Way, Redmond, WA, 98052, USA, is the Sweepstakes sponsor (“Sponsor”).

2. Definitions

In these Rules, “Microsoft,” “we,” “our,” and “us” refer to Sponsor and “you” and “yourself” refers to a Sweepstakes participant, or the parent/legal guardian of any Sweepstakes entrant who has not reached the age of majority to contractually obligate themselves in their legal place of residence. By entering you (your parent/legal guardian if you are not the age of majority in your legal place of residence) agree to be bound by these Rules.

3. Entry Period

The Sweepstakes starts at 12:00 a.m. Pacific Time (“PT”) on June 15, 2026, and ends at 11:59 p.m. PT on July 15, 2026 (“Entry Period”).

4. Eligibility

To enter, you must be eighteen (18) years of age or older. If you are eighteen (18) years of age or older but have not reached the age of majority in your legal place of residence, then you must have consent of a parent/legal guardian.

Employees and directors of Microsoft Corporation and its subsidiaries, affiliates, advertising agencies, and Sweepstakes Parties are not eligible, nor are persons involved in the execution or administration of this promotion, or the family members of each above (parents, children, siblings, spouse/domestic partners, or individuals residing in the same household). Void in Cuba, Iran, North Korea, Sudan, Syria, Region of Crimea, Russia, and where otherwise prohibited by law.

5. How to Enter

No Purchase Necessary. To enter, you must complete the following steps:

- Create a new account or use an existing account on Microsoft Learn at https://learn.microsoft.com/ – look for 'Sign in' at the top right corner of the page, where you can sign in with an existing Microsoft Learn profile or create a new one.

- Earn at least one (1) of the following eligible Microsoft Applied Skills credentials, as further described on the Sweepstakes Landing Page during the Entry Period:
  - Microsoft Applied Skills: Enhance agents with autonomous capabilities
  - Microsoft Applied Skills: Create and publish agents with Microsoft Copilot Studio
  - Microsoft Applied Skills: Generate reports with AI research agents
  - Microsoft Applied Skills: Streamline business workflows with AI chat
  - Microsoft Applied Skills: Create and manage automated processes by using Power Automate
  - Microsoft Applied Skills: Create and manage canvas apps with Power Apps

- Visit https://aka.ms/AIEntryForm to complete and submit the official entry form. The entry form requires the email address Pearson VUE should use to contact you, a link to your earned Applied Skill credential on your Microsoft Learn profile, and your consent to these Rules.

For completing this steps, you will receive one (1) entry. The entry limit is one (1) per person overall. Any attempt by you to obtain more than the stated number of entries by using multiple/different accounts, identities, registrations, logins, or any other methods will void your entries and you may be disqualified. Use of any automated system to participate is prohibited.

We are not responsible for excess, lost, late, or incomplete entries. If disputed, entries will be deemed submitted by the "authorized account holder" of the email address, social media account, or other method used to enter. The "authorized account holder" is the natural person assigned to an email address by an internet or online service provider, or other organization responsible for assigning email addresses.

6. Winner Selection and Notification

Pending confirmation of eligibility, nine hundred (900) potential prize winners will be selected by Microsoft or our designated agent within seven (7) days following the Entry Period in a random drawing from among all eligible entries received.

Winner email addresses will be shared with MindHub Pro by Pearson VUE for the purpose of voucher fulfillment. Potential winners will be notified via the contact information provided during entry no more than seven (7) days following the drawing with prize claim instructions, including the submission and voucher redemption deadlines. Notification will come from "MindHub Pro by

Pearson VUE" and will contain the voucher code. If a selected winner cannot be contacted, is ineligible, fails to claim a prize, or fails to return any forms, the selected winner will forfeit their prize and an alternate winner will be selected. If you are a potential winner and you are eighteen (18) years of age or older but have not reached the age of majority in your legal place of residence, we may require your parent/legal guardian to sign all required forms on your behalf. Only three (3) alternate winners will be selected, after which unclaimed prizes will remain unawarded.

7. Prizes

The following prizes will be awarded:

- **Nine hundred (900) Grand Prizes**. Each winner will receive a voucher code redeemable for 100% off the cost of one (1) of the following Microsoft Certification exams administered by Pearson VUE:
  (i) Exam AB-100 — Microsoft Certified: Agentic AI Business Solutions Architect ;
  (ii) Exam AB-900 — Microsoft 365 Certified: Copilot and Agent Administration Fundamentals ; or
  (iii) Exam AB-620 — Microsoft Certified: AI Agent Builder Associate (launching late June 2026, during the Entry Period).

Approximate Retail Value (ARV) of each prize: **$165.00 USD**. The voucher may not be applied to GitHub Certification exams. Vouchers must be redeemed and exam(s) scheduled and completed on or before November 30, 2026.

The total Approximate Retail Value (ARV) of all prizes: $148,500.00 USD.

The ARV of electronic prizes is subject to price fluctuations in the consumer marketplace based on, among other things, any gap in time between the date the ARV is estimated for purposes of these Official Rules and the date the prize is awarded or redeemed. We will determine the value of the prize to be the fair market value at the time of prize award.

We will only award one (1) prize per person during the Entry Period. No more than the stated number of prizes will be awarded. No substitution, transfer, or assignment of prize permitted, except that Microsoft reserves the right to substitute a prize of equal or greater value in the event the offered prize is unavailable. Microsoft products awarded as prizes are awarded "AS IS" and WITHOUT WARRANTY OF ANY KIND, express or implied (including, but not limited to, any implied warranty of merchantability, fitness for a particular purpose, or non-infringement); you assume the entire risk of quality and performance, and should the prizes prove defective, you assume the entire cost of all necessary servicing or repair. This is so even if the Microsoft product

mentions a warranty on its packaging, in a manual, or in marketing materials; no warranty applies to Microsoft products awarded as prizes.

Microsoft does not give any warranty of any kind, express or implied (including any implied warranty of merchantability or fitness for a particular purpose) on products made by a company other than Microsoft that are awarded as prizes. Please contact the manufacturer to see if it is covered by that company's warranty.

Prizes will be sent no later than twenty-eight (28) days after winner selection. Prize winners may be required to complete and return prize claim and/or tax forms ("Forms") within the deadline stated in the winner notification. Taxes on the prize, if any, are the sole responsibility of the winner, who is advised to seek independent counsel regarding the tax implications of accepting a prize. By accepting a prize, you agree that Microsoft may use your entry, name, image and hometown online and in print, or in any other media, in connection with this Sweepstakes without payment or compensation to you, except where prohibited by law.

8. Odds

The odds of winning are based on the number of eligible entries received.

9. General Conditions and Release of Liability

To the extent allowed by law, by entering you agree to release and hold harmless Microsoft and its respective parents, partners, subsidiaries, affiliates, employees, and agents from any and all liability or any injury, loss, or damage of any kind arising in connection with this Sweepstakes or any prize won.

All federal, state, and local laws and regulations apply. In the event of a dispute, the decisions of Microsoft are final and binding.

We reserve the right to cancel, change, or suspend this Sweepstakes for any reason without prior notice, including, but not limited to, cheating, technology failure, catastrophe, war, or any other unforeseen or unexpected event that affects the integrity of this Sweepstakes, whether human or mechanical. If the integrity of the Sweepstakes cannot be restored, we may select winners from among all eligible entries received before we had to cancel, change or suspend the Sweepstakes.

If you attempt or we have strong reason to believe that you have compromised the integrity or the legitimate operation of this Sweepstakes by cheating, hacking, creating a bot or other automated program, or by committing fraud in any way, we may seek damages from you to the full extent of the law and you may be banned from participation in future Microsoft promotions.

10. Privacy

Personal data you provide while entering this Sweepstakes will be used by Microsoft and our agents and prize fulfillers acting on Microsoft's behalf only for the administration and operation of this Sweepstakes and in accordance with the Microsoft Privacy Statement. As described in Section 6, your email address and entry information will be shared with MindHub Pro by Pearson VUE for the purpose of voucher fulfillment.

If you would like to be removed from the Sweepstakes and have your personal data deleted, please email sweepstakesupport@microsoft.com from the email address you provided at registration. Your personal data will be deleted within seven (7) business days. This action is limited to this Sweepstakes and will not impact other Microsoft applications. Please see the Microsoft Privacy Statement for information on broader privacy requests.

11. Governing Law

This Sweepstakes will be governed by the laws of the State of Washington, and you consent to the exclusive jurisdiction and venue of the courts of the State of Washington for any disputes arising out of this Sweepstakes.

12. Winners List

Send an email to sweepstakesupport@microsoft.com with the subject line "Microsoft AI Agent Skills Sweepstakes winners" within thirty (30) days of July 15, 2026 to receive a list of winners that received a prize worth $25.00 USD or more.

Last updated on 06/12/2026

Frequently asked questions

Applied Skills + Certifications = a powerful combination. Microsoft Applied Skills validate your ability to complete real-world tasks using Microsoft technologies. These focused, flexible micro-credentials help you build job-ready skills and support your journey to earn role-based certification. Earn an eligible Microsoft Applied Skills credential and complete the sweepstakes entry form between June 15, 2026 and July 15, 2026 for a chance to receive a 100% off Microsoft Certification exam voucher (sweepstakes terms and conditions apply).

How do I participate in the Microsoft AI Agent Skills Sweepstakes?

To participate in the Microsoft AI Agent Skills Sweepstakes, you must complete and earn one of the eligible Microsoft Applied Skills credentials and submit an entry form within the sweepstakes timeframe of June 15, 2026 to July 15, 2026.

Steps to enter

1. Review the sweepstakes terms and conditions page.

Complete one of the eligible Microsoft Applied Skills assessments and earn the credential within the sweepstakes timeframe. You can view the eligible assessments on the sweepstakes landing page or in the table below.

2. Complete the sweepstakes entry form.

If you're selected as a winner, you will be contacted by Pearson VUE via email with your 100% off voucher, along with the steps on how to redeem. Those steps can also be found on the How to redeem your prize page. The 100% off Microsoft Certification exam voucher is eligible for one of three Microsoft Certification exams administered by Pearson VUE: Exam AB-100 (Microsoft Certified: Agentic AI Business Solutions Architect), Exam AB-900 (Microsoft 365 administration certification), or Exam AB-620 (Microsoft Certified: Design and build integrated AI Agent solutions in Copilot Studio — launching late June 2026). The voucher is not eligible for any GitHub Certification exam.

To earn a Microsoft Applied Skill credential, you must have a Microsoft Learn profile. If you do not currently have one that's okay, you can create a free account as you take your Microsoft Applied Skill assessment.

How do I earn a Microsoft Applied Skills credential?

To earn a Microsoft Applied Skill credential, you must have a Microsoft Learn profile. If you do not currently have one that's okay, you can create a free account as you take your Microsoft Applied Skill assessment.

How it works

- **Prepare** — Learn at your pace with self-paced learning or instructor-led training taught by Microsoft certified trainers.
- **Earn** — Complete and pass the assessment to earn your Microsoft-verified credential.
- **Share** — Celebrate your new skills by sharing your credential on LinkedIn and other social platforms.

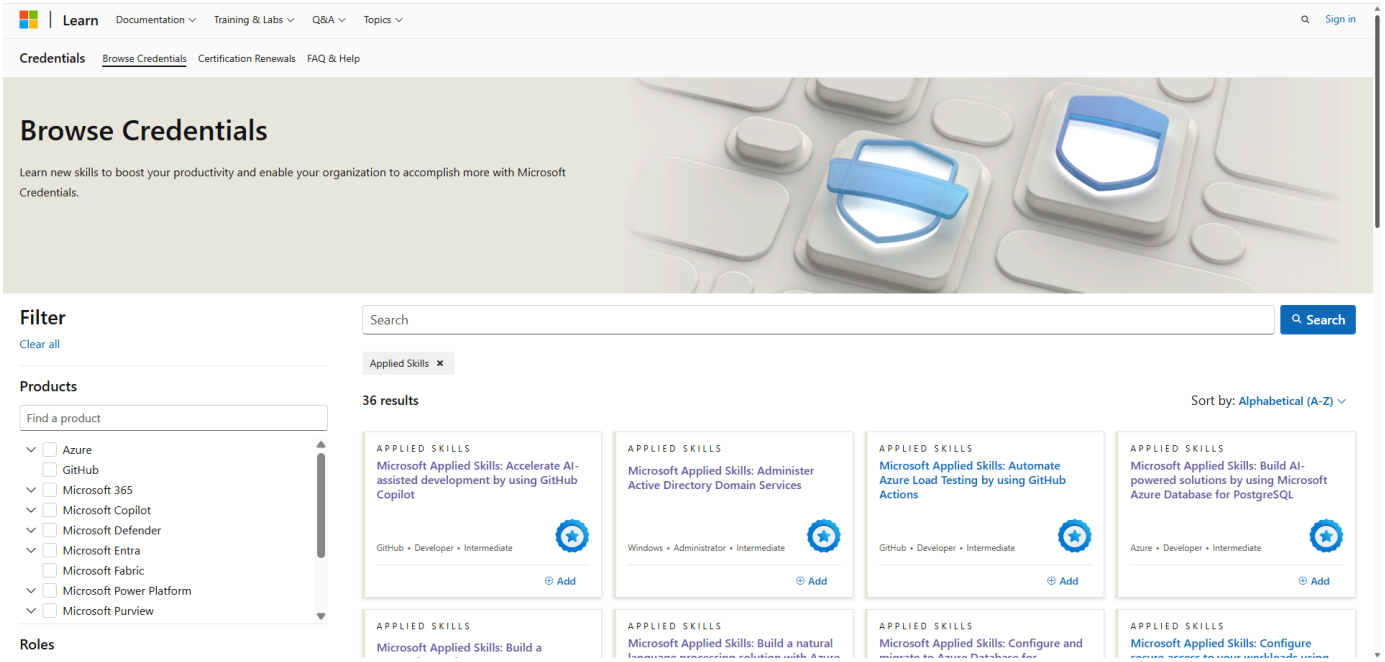
Go to the Microsoft Applied Skills homepage to learn more. Below is the list of eligible assessments for this sweepstakes.

Eligible Microsoft Applied Skills assessments for the Microsoft AI Agent Skills Sweepstakes:

- **Microsoft Applied Skills: Enhance agents with autonomous capabilities**
- **Microsoft Applied Skills: Create agents in Microsoft Copilot Studio**
- **Microsoft Applied Skills: Generate reports with AI research agents**
- **Microsoft Applied Skills: Streamline business workflows with AI chat**
- **Microsoft Applied Skills: Create and manage automated processes by using Power Automate**
- **Microsoft Applied Skills: Create and manage canvas apps with Power Apps**

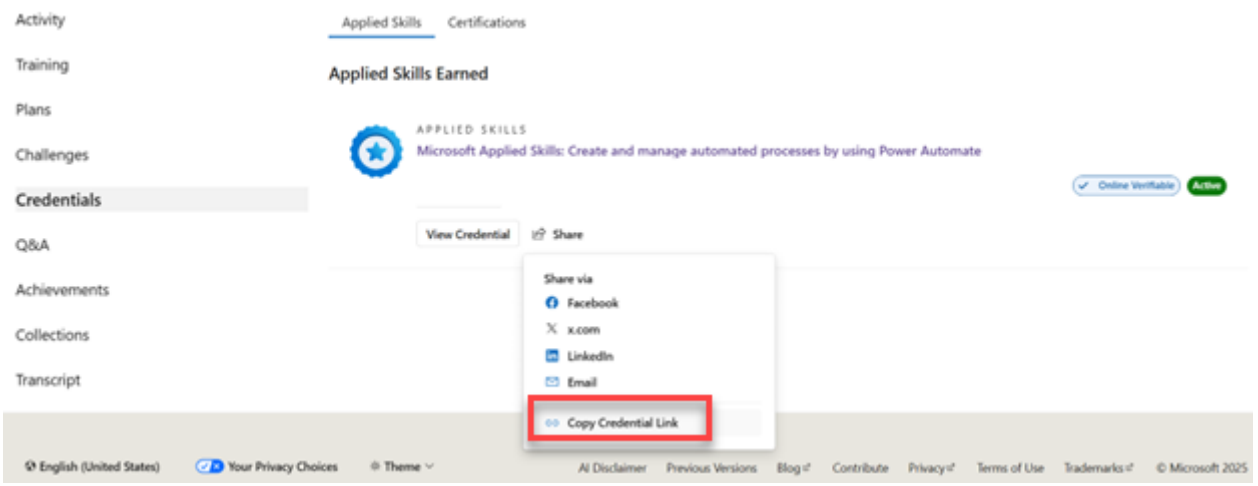
How can I tell if I've earned a Microsoft Applied Skills credential?

Within your Microsoft Learn profile, go to the **Credentials** section. Once there, your Microsoft Applied Skill credentials will display under the **Applied Skills** tab. Make sure the credential was earned in the sweepstakes timeframe of June 15, 2026 (12:00 a.m. PT) – July 15, 2026 (11:59 p.m. PT). If none are listed, you can browse the eligible Microsoft Applied Skills assessments above and select one to take.



I've earned my Microsoft Applied Skills credential. Now what?

Once you have earned your Microsoft Applied Skills credential, you can submit an entry for the sweepstakes for a chance to win a 100% off Microsoft Certification exam voucher by completing the sweepstakes entry form. To complete the submission, you will need to provide: (1) your Microsoft Learn username, (2) the email address you would like the voucher code sent to in the event you are a winner, and (3) the Credential Link of the Microsoft Applied Skill that you earned, which can be found in your profile under the **Credentials** tab when clicking **Share** on the credential (screenshot example below).



Winners will be drawn after the sweepstakes timeframe ends on July 15, 2026. Winners will be notified within seven (7) days of the drawing if they have been selected. The 100% off Microsoft Certification exam voucher is eligible for Exam AB-100, Exam AB-900, or Exam AB-620. It is not eligible for any GitHub Certification exam. To see the complete rules of the sweepstakes, review the Official Rules page.

When are winners drawn for the Microsoft AI Agent Skills Sweepstakes?

There will be one (1) drawing following the close of the Entry Period on July 15, 2026, at which 900 winners will be selected at random from all eligible entries. Winners will be notified within seven (7) days of the drawing. Please refer to section six (6), **Winner Selection and Notification**, of the Microsoft AI Agent Skills Sweepstakes Official Rules.

How will I be notified if I am a winner of a Microsoft AI Agent Skills Sweepstakes drawing?

Winners will be notified via an email sent to the email address they provided in their Microsoft AI Agent Skills Sweepstakes entry form submission. The email will be from "**MindHub Pro by Pearson VUE**" and will contain the 100% off Microsoft Certification exam voucher won along with the expiration date and steps on how to redeem. Emails will be sent within seven (7) days of the drawing. Refer to section six (6), **Winner Selection and Notification**, of the Official Rules for a full breakdown.

How long does the Microsoft AI Agent Skills Sweepstakes run?

The sweepstakes runs from June 15, 2026 at 12:00 a.m. PT (00:00) to July 15, 2026 at 11:59 p.m. PT (23:59).

I am a sweepstakes winner; how long do I have to redeem my prize?

All Microsoft AI Agent Skills Sweepstakes 100% off Microsoft Certification exam vouchers must be redeemed by **November 30, 2026**. This means you must schedule and take your chosen exam by November 30, 2026. When using your voucher, you will not be able to use it for an exam date attempting to be scheduled beyond November 30 , 2026. The 100% off voucher is eligible for Exam AB-100, Exam AB-900, or Exam AB-620. It is not eligible for any GitHub Certification exam. For the full list of rules, please refer to the Microsoft AI Agent Skills Sweepstakes Official Rules.

How do I redeem my 100% off Microsoft Certification exam voucher?

Instructions on how to redeem your voucher will be provided in the notification email you received from "**MindHub Pro by Pearson VUE**" that also contained your voucher code. You can additionally refer to the How to redeem your prize page. The 100% off Microsoft Certification exam voucher is eligible for Exam AB-100, Exam AB-900, or Exam AB-620 only. It is not eligible for any GitHub Certification exam.

Last updated on 06/12/2026

How to redeem your Microsoft AI Agent Skills Sweepstakes prize

Congratulations on being a Microsoft AI Agent Skills Sweepstakes winner and receiving a 100% off Microsoft Certification exam voucher! You will have received an email from "**MindHub Pro by Pearson VUE**" that contains your voucher code and expiration date. Note that you must schedule and take your chosen exam by **November 30, 2026**. You can review the Microsoft AI Agent Skills Sweepstakes Official Rules for the full set of terms and conditions.

The 100% off Microsoft Certification exam voucher is eligible for one of three Microsoft Certification exams administered by Pearson VUE:

- **Exam AB-100** — Microsoft Certified: Agentic AI Business Solutions Architect
- **Exam AB-900** — Microsoft 365 administration certification
- **Exam AB-620** — Microsoft Certified: Design and build integrated AI Agent solutions in Copilot Studio (launching late June 2026)

The voucher is not eligible for any GitHub Certification exam.

If you have not received an email from "MindHub Pro by Pearson VUE," validate you've completed these steps:

1. Review the sweepstakes terms and conditions.

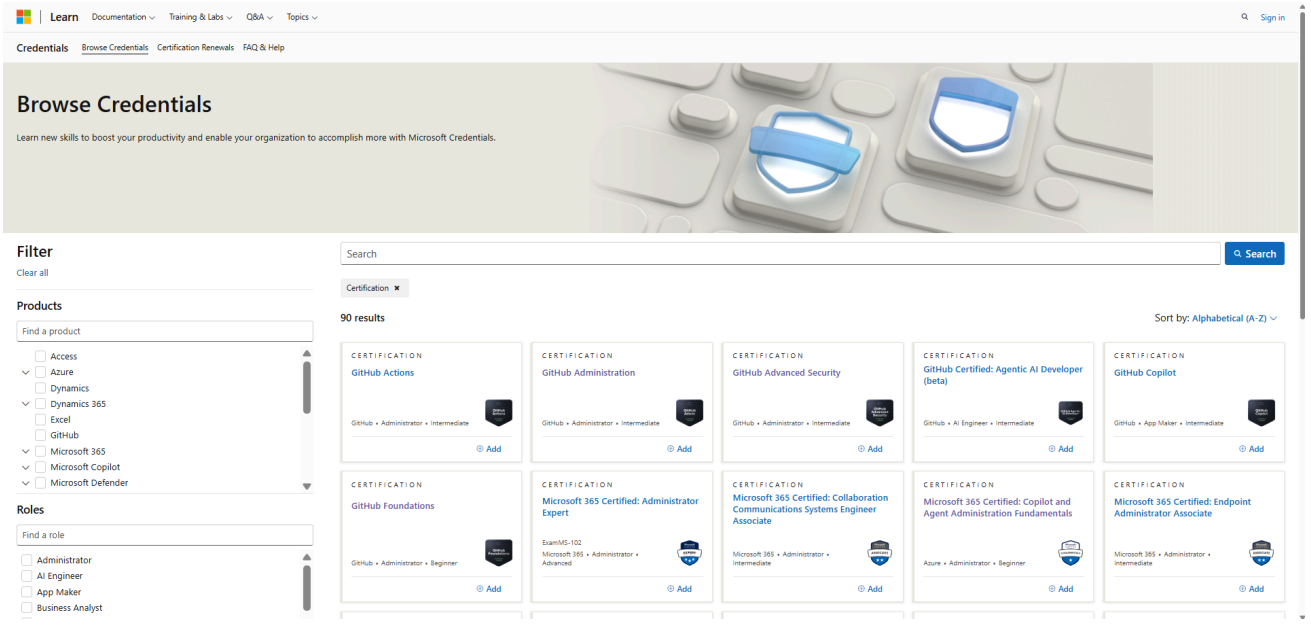
Complete one of the eligible Microsoft Applied Skills assessments and earn the credential within the sweepstakes timeframe of June 15, 2026 to July 15, 2026. The eligible assessments are listed on the sweepstakes landing page and in the FAQ.

2. Complete the sweepstakes entry form.

If you have completed the above steps, you may not have been randomly selected as a winner. Review the Official Rules and FAQ for more information.

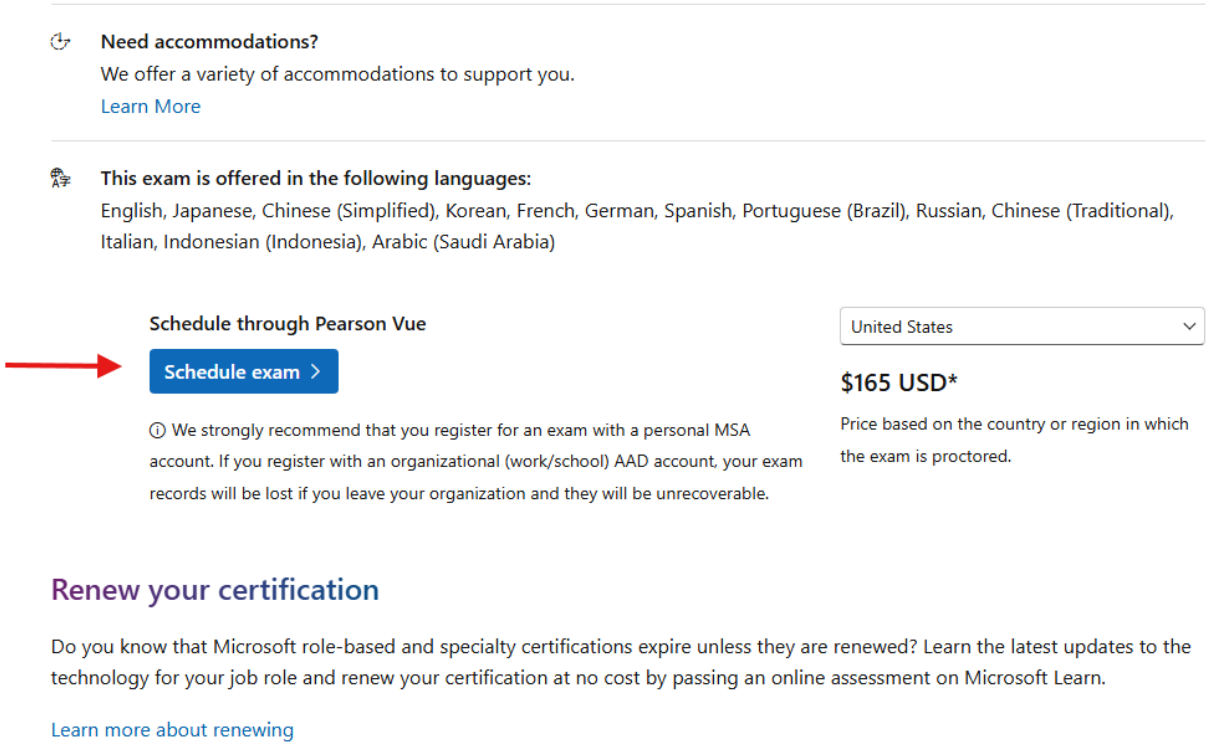
Steps to redeem

1. Select one of the eligible Microsoft Certification exams on Microsoft Learn.
   a. The 100% off Microsoft Certification exam voucher is eligible for **Exam AB-100**, **Exam AB-900**, or **Exam AB-620**.
   b. The voucher is not eligible for any GitHub Certification exam.



2. Review the exam details, scroll down, and click the “Schedule through Pearson VUE” schedule exam button.

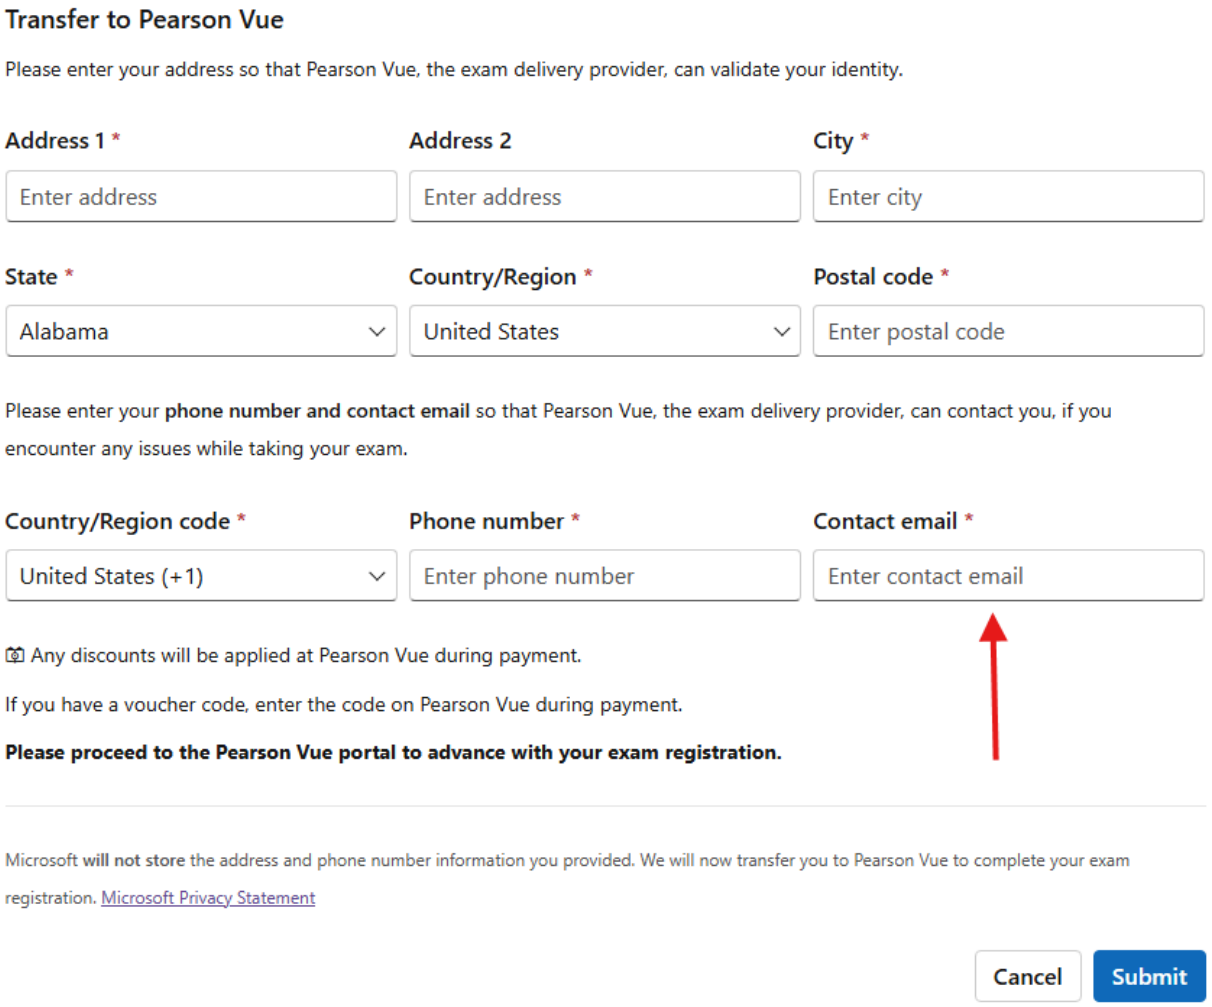
   Some exams may have two options; make sure to select the Pearson VUE option.



3. If you are not logged in to your Microsoft Learn profile, you will be asked to do so at this point.

   After doing so, you will be asked to provide additional information for transfer to Pearson VUE. Complete the form and be sure to provide the same contact email address in which

you received your voucher code.



4. You will be directed to Pearson VUE and prompted to select how you want to take your exam.

   Options may vary depending on which exam you have selected. Choose your preference and continue, noting that the voucher code you received is not a "Private Access Code."

   If you select "**In person at a test center**", proceed to step 5.

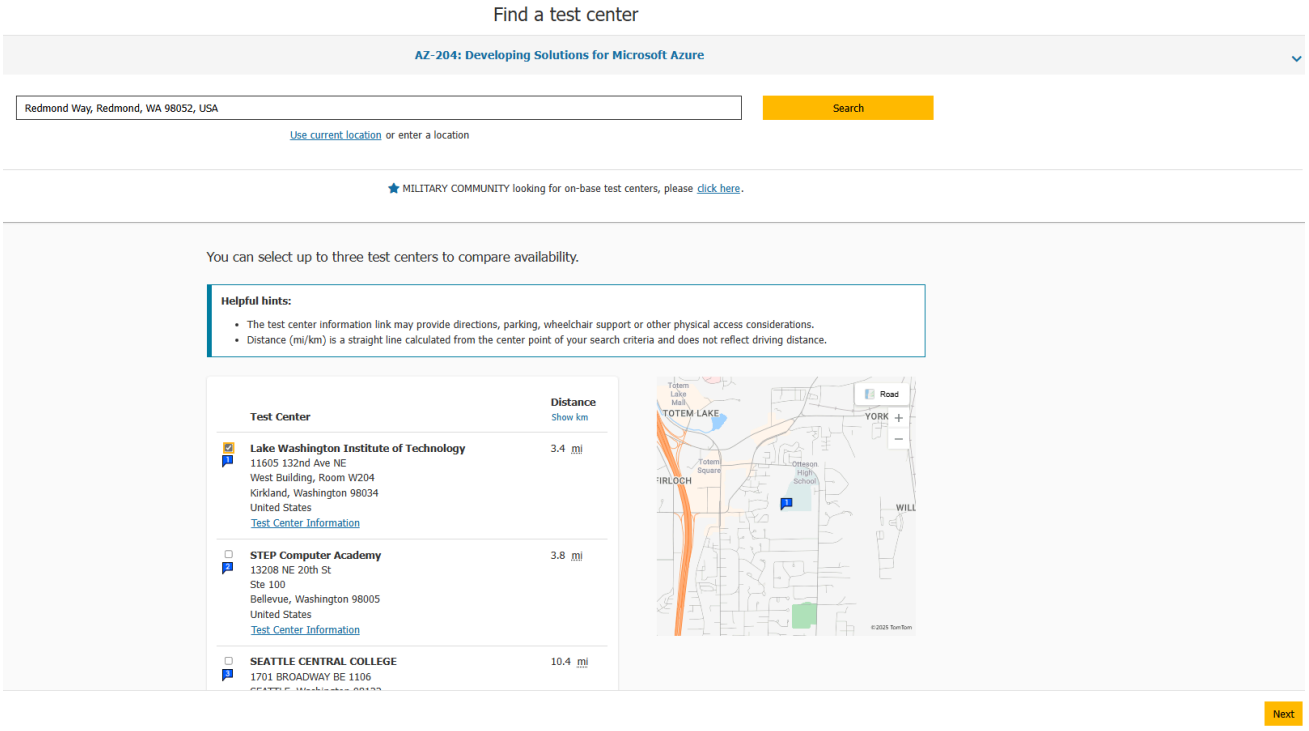
   If you select "**OnVUE online with OnVUE**", proceed to step 6.

5. If you have selected to take the exam in person, you will next be prompted to:

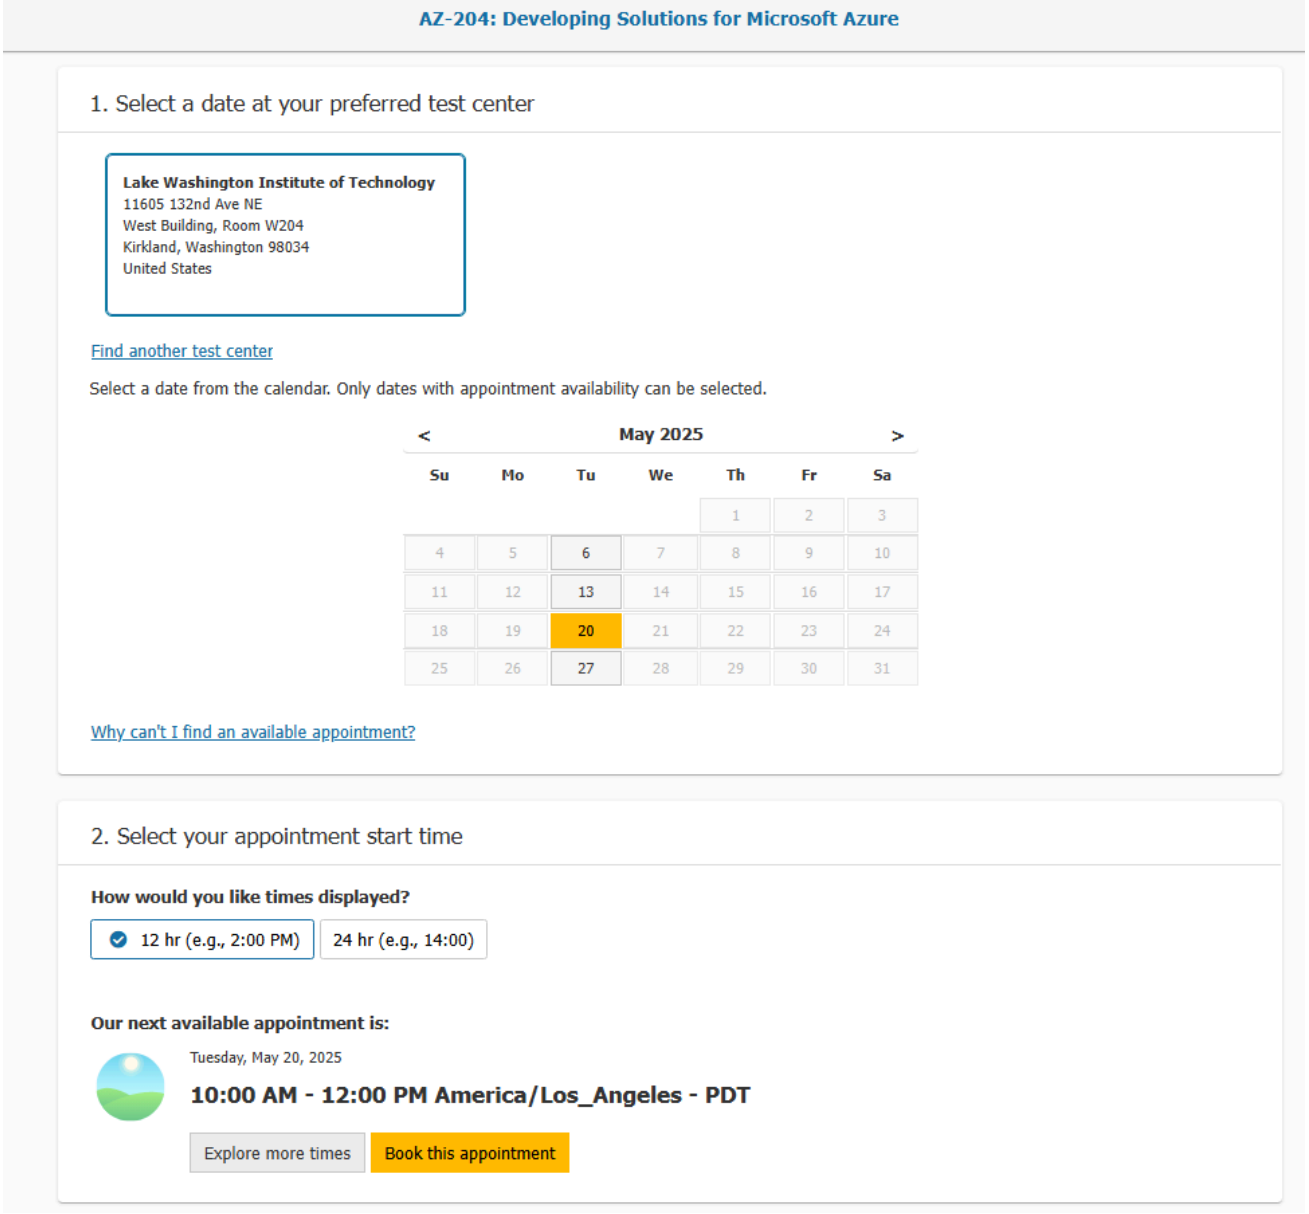
a. Select your preferred exam language. Languages provided vary based on the exam selected.

b. Agree to Pearson VUE exam terms and Microsoft Certification terms.

c. Select your preferred testing center. Testing center options will vary based on your location.

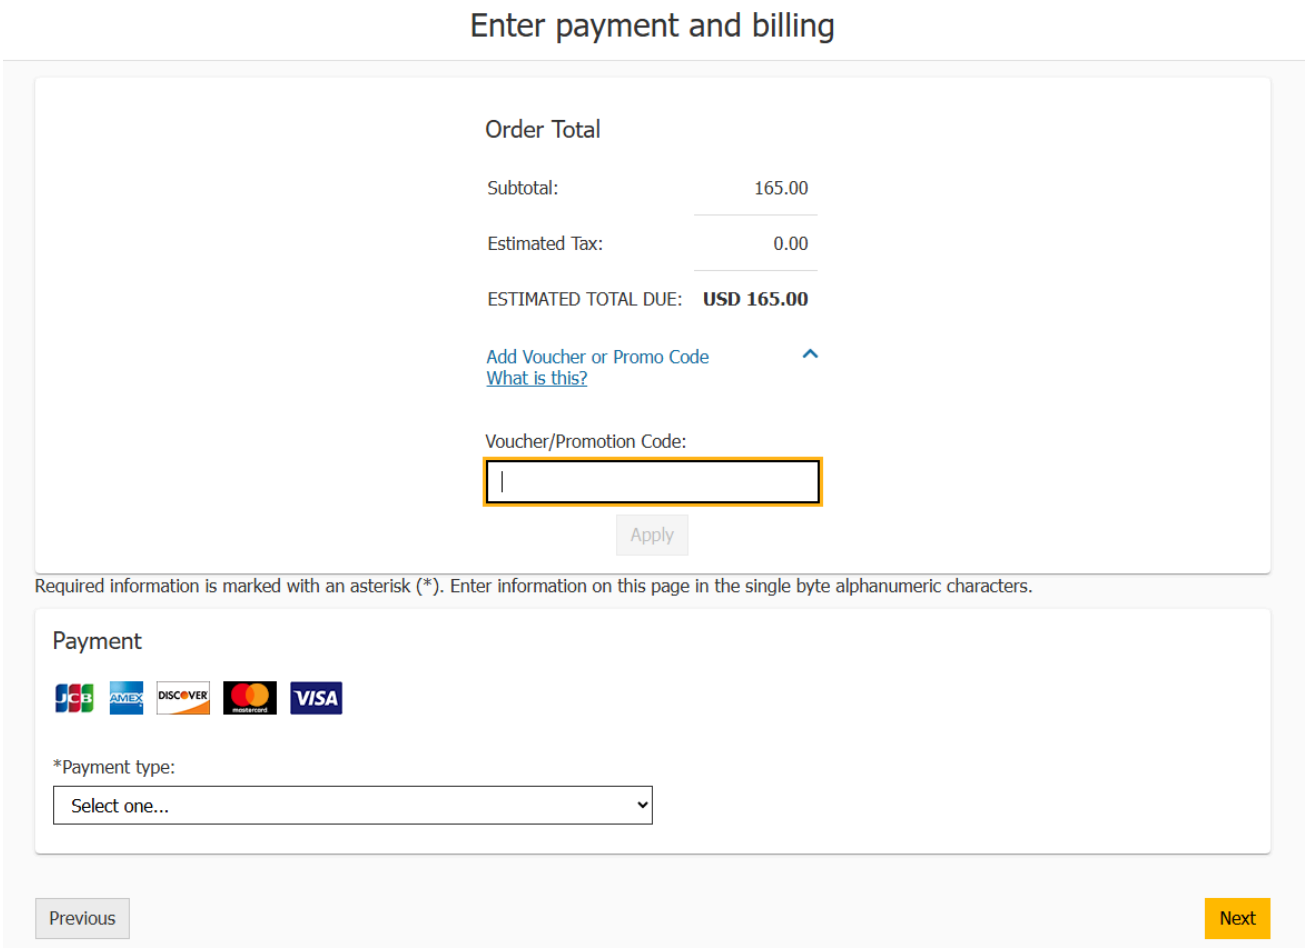


d. Select your preferred exam date and time. Date and time selected must be **on or before November 30, 2026** to use your voucher. If an exam date beyond November 30, 2026 is selected, you will not be able to apply the voucher to the cost of the exam.



e. Next you will be asked to confirm your exam scheduled date and contact information. Review and proceed to checkout. It will still display the cost of the exam — this is expected, continue to proceed to checkout.

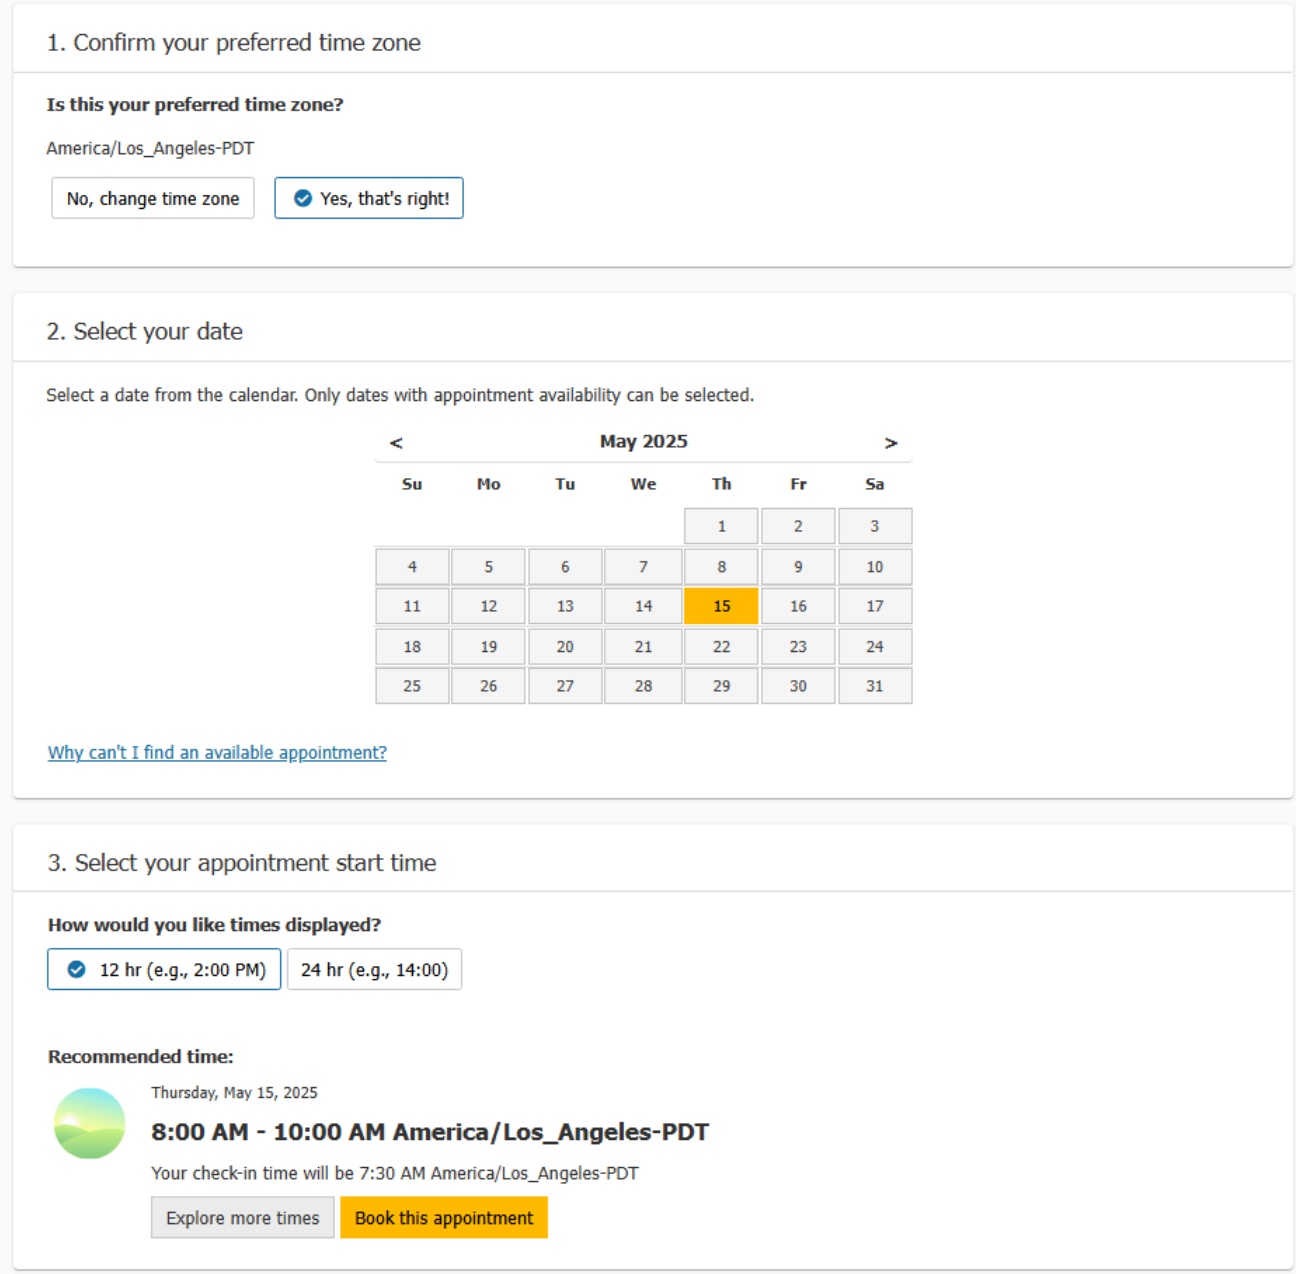
f. In the next screen, you will see an option for **Add Voucher or Promo Code**. Enter the voucher code you received via email from "**MindHub Pro by Pearson VUE.**" After entering the code, click **Apply** to have it applied to the order, then select **Next** to complete your transaction and schedule your exam.



If you experience any issues attempting to redeem your voucher, please contact mindhubprohelp@pearson.com.

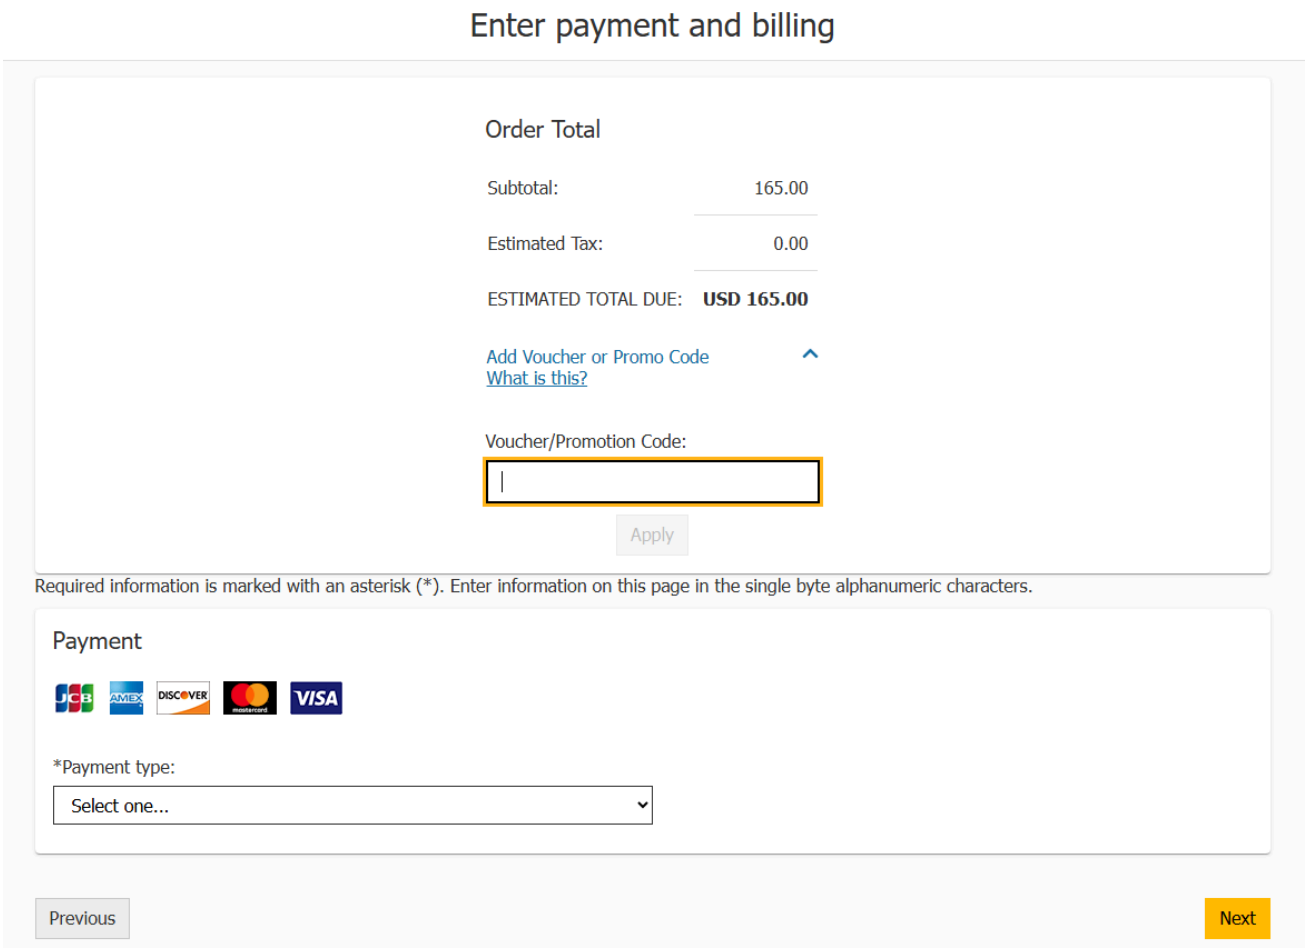
6. If you have selected to take the exam online, you will next be prompted to:

   a. Select your preferred exam language. Languages provided vary based on the exam selected.
   b. Agree to Pearson VUE exam terms and Microsoft Certification terms.
   c. Select your preferred proctor language. Language availability will vary based on exam selection.
   d. Confirm your preferred time zone (will default to browser setting), exam date, and time. Date and time selected must be **on or before November 30, 2026** to use your voucher. If an exam date beyond November 30, 2026 is selected, you will not be able to apply the voucher to the cost of the exam.



e. Next you will be asked to confirm your exam scheduled date and contact information. Review and proceed to checkout. It will still display the cost of the exam — this is expected, continue to proceed to checkout.

f. In the next screen, you will see an option for **Add Voucher or Promo Code**. Enter the voucher code you received via email from "**MindHub Pro by Pearson VUE.**" After entering the code, click **Apply** to have it applied to the order, then select **Next** to complete your transaction and schedule your exam.



After entering the code, click ‘Apply’ to have it applied to the order, then select ‘Next’ to complete your transaction and schedule your exam!

If you experience any issues attempting to redeem your voucher, please contact mindhubprohelp@pearson.com.

Microsoft Essentials Professional Certificate process overview

Article • 01/15/2025

Why earn a Microsoft Essentials Professional Certificate?

Earning a Microsoft Essentials Professional Certificate demonstrates your foundational Microsoft product knowledge. Professional Certificates cater especially to entry-level IT professionals, career changers, and students. These certificates are designed to validate acquired knowledge, marking a significant learning milestone and boosting employability in today's ever-evolving job landscape.

Getting started with Microsoft Essentials Professional Certificates

You can find the available Microsoft Essentials Professional Certificates on LinkedIn Learning, in the Microsoft Professional Certificates overview page. Search for the Professional Certificates you'd like to complete.

The following are currently available:

- Microsoft Azure AI Essentials Professional Certificate
- Microsoft Security Essentials Professional Certificate

Prepare for your Essentials Professional Certificate

Completing the LinkedIn Learning path unlocks access to the summative assessment. Earn the certificate by passing a free, on-demand, summative assessment on LinkedIn. The assessment is designed to be accessible and flexible, with on-demand availability directly from the LinkedIn Learning platform.

Celebrate your success

If you've earned a Microsoft Essentials Professional Certificate, congratulations! Colleagues will recognize your achievement when you share it on professional networks or embed it in your email signature or resume. These credentials and skills are verified by Microsoft, thereby offering a signal of trust that organizations can rely on, giving them full confidence in the authenticity and accuracy of your skills.

Prepare for your Microsoft Essentials Professional Certificate

Article • 01/15/2025

Learn with self-paced learning paths on LinkedIn

Access free, video-supported learning paths and test your knowledge along the way with knowledge checks all available on LinkedIn. See links below:

LinkedIn Professional Certificates page

Or

Philanthropies/LinkedIn Opportunities page

Register and schedule the assessment

You don’t need to schedule your assessment. You will be able to access the assessment immediately after completing the course's self-paced and video-supported learning path. Additionally, the assessment is not proctored.

Essentials Learning path and assessment duration and experience

Article • 01/15/2025

Learning path experience

The Microsoft Essentials Professional Certificate learning paths consist of approximately 3.5 hours of learning content. The learning paths on LinkedIn Learning are free, self-paced, and video supported. There are knowledge checks along the way to test your knowledge.

Assessment experience

Once you've completed the learning path, you'll have immediate access to the summative assessment. You're given 90 minutes to complete. The assessment consists of multiple-choice questions.

Accommodations

The learning path and assessment will function with most assistive technologies. Closed captioning is provided for the videos.

LinkedIn has set the assessment time to be three times longer than most people will need to complete it, so additional time requests are not necessary.

Essentials Assessment scoring

Article • 01/15/2025

Score needed to pass the assessment

You'll need to score at least 70% to pass.

You'll only have 3 attempts to pass the assessment. Once these three attempts are used, the system will not be reset. If you experience a technical issue and have no more attempts remaining, LinkedIn will partner with their engineering team to give you an additional attempt. To contact LinkedIn Learning Support, visit https://www.linkedin.com/help/learning , and either start a chat with support, or scroll down to the bottom of the page to the "Contact us," link to create a support ticket.

Once you've passed the assessment you will not be able to take the assessment again.

When to expect your score

You will receive your results immediately upon completion.

Microsoft Essentials Professional Certificate frequently asked questions

Article • 01/15/2025

Is there a cost for the Professional Certificate?

No, the learning path and assessment are free! Log into your LinkedIn account and get started today.

Does the Professional Certificate skill expire?

No, the Professional Certificate does not expire.

Are Professional Certificates offered in multiple languages?

Yes, the learning path, closed captions, and assessment are localized into the following languages: German, French, Spanish, Japanese, Brazilian Portuguese, Mandarin (simplified).

Do Essentials Professional Certificates include college credit recommendations?

Currently, there is no college credit articulation through the American Council on Education (as exists with Microsoft Certifications). Schools are welcome to assign college credit for these certificates based on their individual standards.

Frequently asked questions (FAQs) about renewal

Article • 07/08/2024

Do all Microsoft Certifications have the option to renew?

Microsoft associate, specialty, and expert certifications that have been available for more than six months have a renewal option. For details, visit our certification renewal blog.

Is there a cost to renew Microsoft Certifications?

No. Certification renewal is free to anyone with a valid Microsoft associate, specialty, and expert certification.

Do I need to renew my Microsoft fundamentals certification?

No. Renewal does not apply to fundamentals certifications as they do not expire.

Why do role-based certifications expire after one year?

Certifications expire after one year to ensure that tech professionals keep skills up-to-date with evolving technology.

Can I renew my certification by passing a beta exam or by retaking an exam before my certification expires?

No. You must pass the renewal assessment for your certification on Microsoft Learn before your certification expires; no alternative paths are available to renew your certification. There are no exceptions to this policy.

My expert-level certification requires achieving an associate-level certification as a prerequisite. If the associate-level certification expires, will my expert-level certification automatically expire, too?

No. Your expert-level certification will not automatically expire if your associate-level prerequisite certification expires. Each certification must be renewed separately by passing the associated renewal assessment.

My certification expired. What happens now?

If your certification expires, you must earn the certification again by passing the required exam(s). For more information, visit our Certification expiration policy.

Renewal process questions

Are there different ways to renew my certification?

No. The only way to renew a Microsoft Certification is by passing the free, online renewal assessment on Microsoft Learn.

Can I renew my certification more than six months before it expires?

No. The renewal assessment on Microsoft Learn is only available once you're eligible six months before your certification expires (expiration dates and times are in UTC).

We recommend taking the renewal assessment well before expiration to allow time for any unforeseen events, such as medical emergencies, technical issues, or multiple retakes.

Where do I go to check what certifications are available for renewal?

Sign into your Learn profile, select the photo avatar, and choose Profile from the dropdown menu. Choose Certifications inside the profile menu and look for the blue Renew button as you scroll through your certifications.

Note: If we have an email on the Learn Profile and you agreed to our communication terms you'll receive email notifications as your certifications become eligible for renewal.

Questions about renewal assessment

How many times can I retake the assessment?

There is no limit to renewal assessment retakes. Just be sure to pass before your certification expires. If you don't pass, you can try again immediately. After the second try, you'll need to wait at least 24 hours between future attempts.

Once I pass the renewal assessment, how long does it take to update my certification to show the new expiration date?

Once you pass the renewal assessment, the expiration date for your certification will be immediately updated on your Microsoft Learn profile.

Are the renewal assessments aligned to the regular exam update cadence?

Yes. Updates to the assessments are aligned with certification exam updates.

Which languages are assessments available in?

Renewal assessments on Microsoft Learn will be available in the same language(s) as their corresponding certification exams.

I have heard renewal assessment is shorter. How do I prepare for the renewal assessment?

The renewal assessment is shorter because it focuses only on relevant updates. Renewal assessments take about 45 minutes to complete. Prepare by using the learning modules on the certification's renewal page on Microsoft Learn.

Certification Retirement and the Impact on Renewable Certification

Why does Microsoft occasionally retire certifications?

Several factors influence retirement decisions.

- **Relevancy:** Technology and associated job roles are evolving more quickly than ever before. To keep the certification program relevant, exams and certifications are regularly reviewed to ensure they reflect the latest skills technologies. A certification will be retired when it is deemed to have lost relevancy.
- **Product Alignment:** Product groups may decide to depreciate a product. With that, all learning content and related certifications must be taken out of the market in a timely manner.
- **Instructional Design:** Sometimes, content teams evolve the strategy for earning a certification. For example, multiple exams could be merged down to one, which may result in certifications being retired.

Is the renewal program changing? No. This update is only focused on deploying a smoother process for *retiring certifications*. The certification renewal program continues to focus on providing renewal assessments to all learners who have a role-based certification. The assessments are free to take, and there are no limits to attempts. To keep the certification active, the learner must pass the renewal assessment before the certification expires. This window opens 6 months before expiry.

What was the change that was made?

This update enables Microsoft to provide a more user-friendly way of retiring a certification. For instance, because of this work, the system will suppress any renewal reminders for retiring certs, as these reminders would be potentially confusing. In addition, in the case of a retiring certification, the window to renew may be shortened

for some users, based on their certification anniversary date. This update ensures Microsoft is always communicating accurate dates for renewal activity on Learn.

How will I know if I have a certification that is retiring?

Alerts will be visible on Learn, just as they are today. With this update to the system, the "renew by" messaging will take into consideration retirement dates. For instance, if a certification retirement date *precedes the expiration date for a certification*, the learner will be instructed to renew *before certification retirement*.

Several legacy certifications have already retired before this capability was enabled. How are those being handled?

It is true that several renewable certifications have retired, meaning learners can no longer earn the certifications. However, until now, there has been no mechanism to disable renewal assessment portion. With this update, there will be a bulk retirement of all renewal assessments related to the previously retired certifications. Learners who possess any of the retired certifications will receive a direct email from Microsoft along with guidance on how long the renewal assessment will be available.

View and share your transcript

06/16/2025

Access transcripts in Learn

You can view, share, and print your transcript from your Learn profile:

- Sign into your Learn profile
- Click on the photo avatar and select *Profile* from the dropdown menu
- In the profile menu, select *Transcript*. Your transcript displays all successfully completed certifications and modules.

4. Select "*Share link*" to generate an online link to your transcript you can share with potential employers. Save, share, or email a copy of your transcript, from the *Print* link. (Choose "*Save to PDF*" or print from the *Printer* drop-down menu. You can then attach the downloaded PDF to an email, print, or save it for your records.)

Educational transcripts

Transcripts for learning institutions must be shared via Credly. Please visit: College credit for certification exams to learn more.

Certificates from Certiport

Microsoft is currently working to improve the integration of Certiport and Microsoft Credentials on Learn. We expect the integration work to be completed in the coming months, at which time all additional Learn records will reflect all your Microsoft Certification activity.

Please be aware that until the integration is complete, you are still able to manage your Certiport-earned certifications from your Certiport Test Candidate account where you can view and download and share your certificates and your Certiport transcript. Microsoft Certifications earned with Certiport and visible on your Certiport Test Candidate account are fully acknowledged as official by Microsoft.

Sharing Microsoft Credentials

Article • 07/01/2024

About digital certificates and achievements

Sharing your Microsoft Credentials through your Microsoft Learn profile is proof that you've met the requirements for earning that credential. More than that, they're a symbol of that you have demonstrated business critical skills as well as your commitment to keeping pace with technology. Share your credential on your LinkedIn profile and career-related social media posts or by adding a personalized link in your email signature.

Digital certificates can be downloaded and printed for your records (or framed on your wall so they're visible in your next video call… and your mom might like a copy, too!)

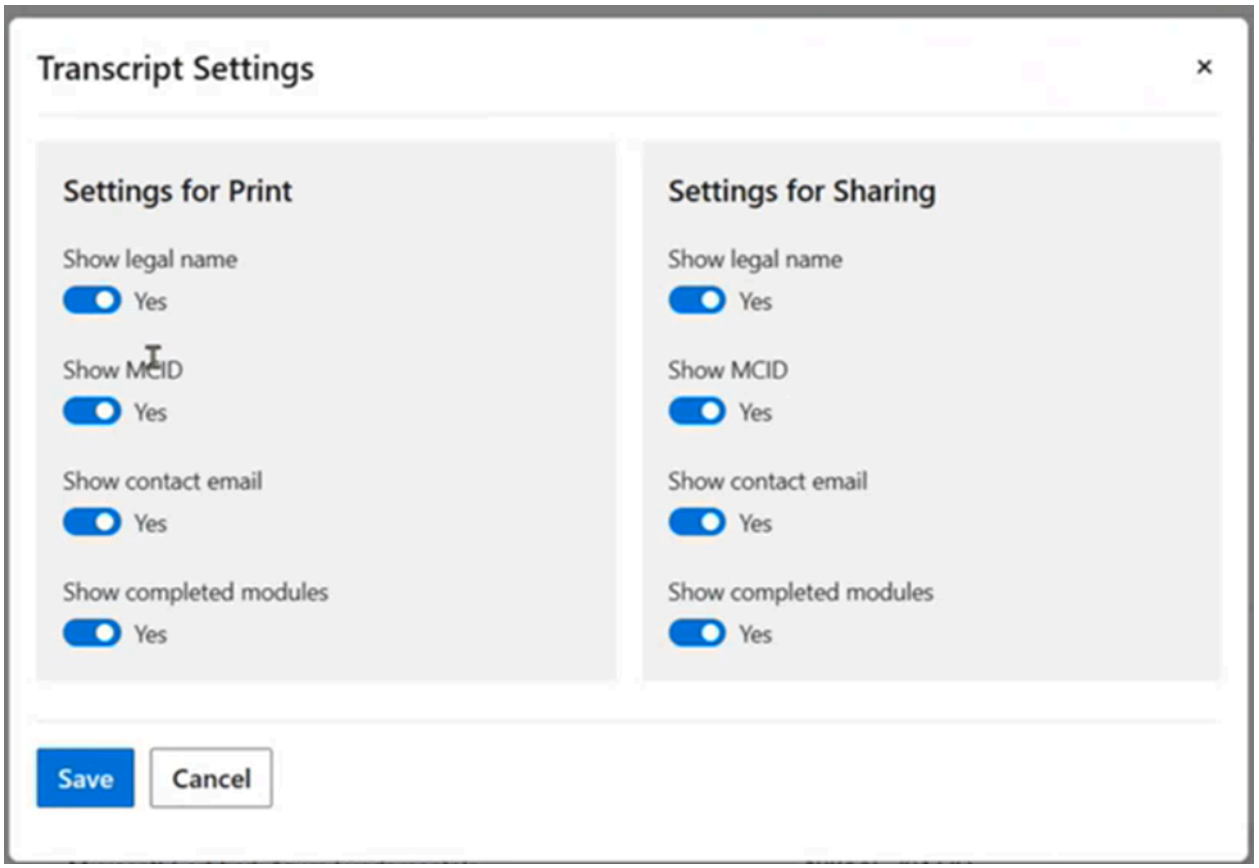
Access transcripts in the Learn profile

You can view, share, and print your transcript from your Learn profile:

- Sign into your Learn profile.
- At the bottom of the left-hand menu, select **Transcript**. Your transcript displays all earned credentials and qualifications.

Sharing transcripts and settings

Transcript settings allow you to choose what information you want to share. While in your Learn profile, in the **Transcripts** section, there is an option at the top of the page to set privacy settings for both Print and Sharing options.



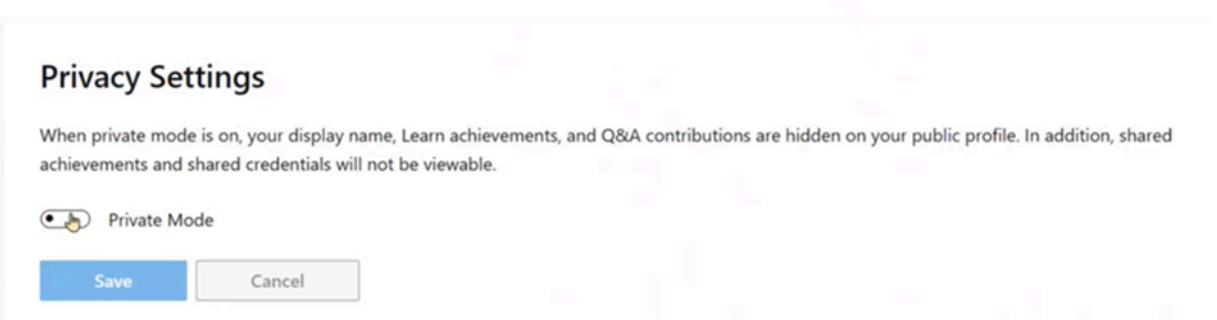
After you save your sharing preferences, you have two ways to share:

- Select **Share link** in the top right hand of the page to generate an online link to your transcript that you can then share.
- Select **Print** and choose **Save to PDF** or print from the **Printer** dropdown menu. You can then attach the downloaded PDF to an email, print, or save it for your records.

Sharing and Privacy Setting

Profile settings are accessible in the top drop-down next to the profile icon.

- Before sharing, ensure that the profile Privacy Setting is **not** set to Private Mode.
- Operating in Private Mode will ensure your name, achievements and Q&A contributions are hidden. It will also prevent anyone from viewing your profile even if you want to share.



For other profile management tips, see profile settings.

Sharing Applied Skills credentials

Within the Learn profile, you can share validated details of your Microsoft credentials:

- At the top of the page, click on your profile icon and from the dropdown menu select **Profile**.
- Within your Learn profile, select **Credentials** in the left-hand column. You can select from applied skills or certifications in the center section.
- Select **Applied Skills**. Your earned credentials will be displayed in a list.
- For the Applied Skills credential you want to share, select **View credential details** below the description. The **Your credentials details** screen will display.
- Select the **Share** link for a set of sharing options.

Sharing Certification credentials

Within the Learn profile, you can share validated details of your Microsoft credentials:

- At the top of the page, click on your profile icon and from the dropdown menu select **Profile**.
- Within your Learn profile, select **Credentials** in the left-hand column. You can then select the **Applied Skills** or **Certifications** tab.
- Select **Certifications**. Your earned Certification will be displayed on a list.
- For the certification you want to share, select **View certification details** below the description. The **Your certification details** screen will display.
- Select the **Share** link for a set of sharing options.

Credential sharing frequently asked questions

How do I know that my credential is verified?

Once you have completed the requirements to earn a Microsoft Credential, it will be added to your Learn profile under **Credentials** and the credential type, that is, Applied Skills or Certifications. Verified credentials will have an **Online Verifiable** tag.

Does my Learn profile need to be public to share my Microsoft credentials?

You can share your credentials with your Learn profile in either public or private view. However, to ensure your shared credentials can be verified, your Learn profile must be in public view.

What if I don't want my Microsoft credentials to be made public?

You're in control of how and when your credentials are shared. Adjust the privacy settings in your Learn profile at any time to make your profile and credentials public or private.

Can I share a credential after it has been retired?

If you earned a credential that has been retired, you can still view and share it through your Microsoft Learn profile. The credential will still be available on your Microsoft Learn transcript as well.

Why can't I share exams that I have passed?

An exam is not a credential. You can only share credentials through Learn.

Although you can't share exams in the same way that you can share certifications, the exams you passed will be viewable on your Microsoft Learn transcript. You can share your transcript.

How do I receive college credit for a Microsoft Certification?

For information regarding earing college credit for Microsoft Certifications, please visit College credit for certification exams.

Who can I talk to if I'm having trouble with viewing or sharing my Microsoft credential?

Visit Credentials support.

Accessing your Learn profile

06/25/2025

Access to your Learn Profile and associated credentials requires that you are able to sign in with at least one valid Microsoft Learn login account.

Microsoft Personal Login Account

If you lose access to the personal Microsoft account used to log in to your Microsoft Learn profile and have not added an alternate work or school account, this will result in a loss of access to your profile and any data it contains.

- If you have forgotten your Microsoft Learn username, read Forgotten your Microsoft account username.
- If you know your username and password but they have stopped working, read My username and password have stopped working.
- If you have forgotten your password and need to reset it, read Reset a forgotten Microsoft Account Password.
- You must sign in to your Microsoft account at least once in a **two-year** period to keep your Microsoft personal account active. However, if you have earned a Microsoft Certification, the aging out policy does not apply. For more details, visit the Microsoft Account Activity Policy.

If you are unable to reset your username or password for any reason, help is available only through the Microsoft Account Help self-service.

Microsoft Credentials Support cannot assist with recovery of personal Microsoft accounts and cannot transfer or restore the contents of a Learn profile you are unable to access.

Work or School Login Accounts

If you lose access to your work or school login account and have not added an alternate account to your learn profile, this will result in a loss of access to your profile and any data it contains. We strongly recommend adding a personal Microsoft account to ensure continued access to your profile regardless of employment or academic status.

Microsoft cannot assist with recovery of work or school accounts. Please work with your workplace or school IT administrator for account access issues.

For information about managing or securing your work or school account, visit "Work Or School Account Help".

Missing Exams or Certifications

If you do not see the exams or credentials you expect on your Learn profile:

Review the credential requirements

Check the certification or exam details pages to make sure you have earned the credential by passing the appropriate exams.

Confirm your login account

Make sure you are signing in to the correct Learn profile.

- If you have created multiple Learn profiles under different login accounts, you may be signing into the wrong one.
- Users who share computers or login accounts with others may inadvertently sign into Microsoft Learn with the wrong login account when registering for an exam. If you share a computer, be absolutely sure that you are signed in to Learn under the intended login account before registering for your exam.
- After earning a Microsoft Certification, your congratulations email will be sent to the email listed as your Contact Email in your Learn profile. This email is not necessarily the login account you use to sign in to your profile. If you click on the profile link in your Congratulations email and do not see the expected Certification, you may have earned it under a different profile.
- Try logging into Learn using any other login accounts that you may have used to register for your certification exam. This may include a personal Microsoft account or a work or school account.

AI Skills Navigator

AI Skills Navigator displays earned certifications from your Microsoft Learn profile. If a certification is missing in AI Skills Navigator, use the steps in this article to troubleshoot your issue.

Testing at Certiport

Exams and Certifications earned through Certiport are not currently reflected in the Microsoft Learn profile. Until further notice, you will need to manage and share any Certiport credentials separately through your Certiport user account. For help with Certiport account issues, contact Certiport Customer Service.

Legacy Certifications

Some older exams and certifications have aged out of the Certification Program and are no longer available in customer Learn profiles.

Contact Support

For additional assistance with missing credentials, contact Microsoft Credentials Support.

Credential retirement

Why credentials get retired

Technology changes faster every year. To keep our credentialing program relevant, we continually review our Applied Skills scenarios and Certifications to ensure they reflect the latest skills and Microsoft technologies and retire those that are no longer relevant. Our goal is to empower candidates to be on the leading edge of tech by allowing them to validate relevant, real-world skills needed to solve critical business problems and perform job roles that are needed for organizations to achieve their digital transformation goals.

Certifications scheduled to retire

Certifications scheduled to be retired in the next 12 months are listed here. (This information is subject to change.)

Expand table

Certification	Retirement date
Microsoft Certified: Azure Developer Associate	July 31, 2026
Microsoft Certified: Dynamics 365 Customer Experience Analyst Associate	July 31, 2026
Microsoft Certified: Azure Security Engineer Associate	August 31, 2026
Microsoft Certified: Power Platform Functional Consultant Associate	August 31, 2026
Microsoft Certified: Windows Server Hybrid Administrator Associate	September 30, 2026

Applied skills credentials scheduled to retire

Applied skills credentials scheduled to be retired in the next 12 months are listed here. (This information is subject to change.)

Expand table

Applied Skills name	Retirement date
Microsoft Applied Skills: Create agents in Microsoft Copilot Studio	July 08, 2026

Recently retired Certifications

These Certifications have been retired within the last year. When a Certification has been retired for more than one year, it will be removed from this page. Once a Certification has been retired, it will no longer be available in the Certification offerings. If you earned or renewed a Certification before it was retired, it will remain on your transcript in the Active Certifications section until it expires. Once the Certification expires, it will move the Historical Certifications section of your transcript.

Exam and assessment lab retirement

Why exams and assessment labs are retired

Technology changes faster every year. To keep our credentialing program relevant, we continually review our Applied Skills scenarios and Certifications to ensure they reflect the latest skills and Microsoft technologies and retire those that are no longer relevant. Our goal is to empower candidates to be on the leading edge of tech by allowing them to validate real-world relevant skills needed to solve critical business problems and perform job roles that are needed for organizations to achieve their digital transformation goals.

What to expect when an exam or assessment lab is retired

If you're currently preparing for an exam or assessment lab that will be retired, we strongly recommend that you take the exam or assessment lab before the retirement date. You won't be able to take these exams, assessment labs, or earn the associated certification or credential after that date.

If you've already earned the certification or Applied Skills, it will stay on the transcript in your profile on Microsoft Learn. If you're eligible to renew your certification before the retirement date, we recommend that you consider doing so; you will not have an option to do so after the certification retires.

For Microsoft Partners, those who have earned any of the eligible certifications or Applied Skills before they retire will continue to earn points or credit toward Partner requirements for one year after the retirement date. New certifications or Applied Skills credentials may be added to the Partner Program requirements. These changes will be shared with partners when additional details are available.

Exams scheduled to retire

Exams scheduled to be retired in the next 12 months are listed here by date. (This information is subject to change.)

Expand table

Exam number	Exam name	Retirement date
DP-100	Microsoft Certified: Azure Data Scientist Associate	June 01, 2026
AI-102	Microsoft Certified: Azure AI Engineer Associate	June 30, 2026
AI-900	Microsoft Certified: Azure AI Fundamentals	June 30, 2026
AZ-800	Microsoft Certified: Windows Server Hybrid Administrator Associate	September 30, 2026
AZ-801	Microsoft Certified: Windows Server Hybrid Administrator Associate	September 30, 2026

Course retirement

About course retirement

Technology and associated job roles change faster every year. As Microsoft technology evolves, we revise our training content to keep in line with changes in the technology. To empower you to be on the leading edge and offer you the most relevant training opportunities, we regularly introduce new courses and revise or retire older courses.

Once a course is retired, the course page will be removed from the Microsoft Learn site. However, in many cases the Learning Paths and Modules will remain available on the site for reference. Saving these Learning Paths and Modules to your personal collections will ensure you have access to them until they are finally retired. Any achievements or badges earned will remain on your transcript after retirement.

Retired courses: MOC On-Demand

All Microsoft Official Course (MOC) On-Demand courses have been retired as of June 30, 2020. For a complete list of the retired courses, visit: MOC On-Demand Courses are Retired.

Frequently asked questions about course and MOC On-Demand retirement

What criteria are used to determine that a course should be retired?

Typically, a course will be retired in one of the following scenarios:

- The course has been replaced. A new course is released which replaces one or more previous courses and which covers the material in a substantially new manner.
- If the technology covered in a course is no longer supported by Microsoft, the course will typically be retired.
- Business decisions related to the success of a course or the costs of keeping a course up to date may lead to retirement.
- The certification is retired. If the course was designed for a certification that is no longer offered, the course may be retired.
- Courses that are offered by non-Microsoft authors through the community-authoring program may be retired for any reason, at the author's request.
- Quality concerns may result in course retirement. If quality concerns are identified with a course, it may be retired until the quality can be improved.

How will I know if a course is retired?

Microsoft publishes a quarterly list of courses that are retired and those that are scheduled for retirement within the next three to six months. Retirement announcements are shared through communications with training partners, trainers, vendors, and other interested audiences. The course descriptions on the Microsoft Training Catalog and the Courseware Library Catalog are updated with an announcement of the retirement date.

How can I purchase a course after its retirement date?

After their retirement date, courses are no longer sold. The retirement date is published through the catalog webpage for each course and through regular communication channels for each audience. On the effective retirement date, the courseware is marked as no longer for sale. To avoid confusion, the course remains listed as not for sale for a period of time after the effective retirement, until it is archived and removed from the catalog entirely.

Can I purchase the digital version of a course before retirement and download or use it after the retirement date?

After the course is retired, you no longer have access to download it. If you downloaded or received the courseware prior to the retirement date, you may use it according to the licensing terms.

What happens to retired courses that were assigned to me, prior to their retirement, in my Learning Plan and/or added under the "My Courses" section?

You will continue to see these courses in the "My Courses" section after their retirement but attempting to launch a retired course will result in an error message.

If I did not complete a course before its retirement, will I be allowed to complete it after it has been retired?

No. After a course is retired, you can no longer access it.

How will course activity reports reflect in-progress courses at the time of their retirement?

The course activity reports reflect your progress on a course at the time of its retirement. For example, if a course is at 60% completion by a user when the course is retired, the course activity reports will show 60% completion progress. The completion percentage of a course cannot be changed after a course is retired.

Will I still be able to find a retired course on the online learning site?

No. Retired courses no longer appear in search results or in the course catalog.

Exam Replay

In partnership with Pearson VUE, we offer a special package called Exam Replay. Exam Replay gives you a second chance to pass your certification exam. If you don't pass on your first try, don't worry, just polish your skills and retake the exam if needed.

This offer includes:

- One Microsoft Certified Professional Certification exam voucher.
- One retake of that same exam.

  Buy Exam Replay now.

Important notes about this offer

- The certification exam and the retake must be scheduled and taken within 12 months of purchase.
- You cannot schedule your retake until you have taken and failed to pass the initial exam.
- You can take the exams online with this offer.

If you need help purchasing or redeeming this offer

Please contact the Pearson VUE team.

Cloud Games

Article • 04/29/2024

As part of our commitment to continuous improvement and innovation, we decided to retire Cloud Games. Effective April 29, 2024, this product is no longer available for use or support.

As technology evolves, so do our solutions. We believe that retiring Cloud Games allows us to focus on delivering even more value to our customers. Our team is developing exciting new products, and in the meantime, we encourage you to explore these alternatives.

Thank you for being a part of our journey. We appreciate your trust and look forward to serving you with our cutting-edge products.

About beta Certification exams

We work hard to ensure our exams are technically accurate and relevant to real-life workplace situations, and beta exams are a critical part of our development process. When you take an exam in its beta form, your results provide useful information to evaluate the quality of the exam and its questions.

How to participate

We need approximately 400 beta test-takers to ensure a valid, reliable evaluation of the knowledge and skills needed for success. To ensure we have enough qualified people take the exam as quickly as possible, we offer a limited number of discounted seats during a 3–4-week window. We'll post announcements for upcoming beta exams with an eighty percent discount code on the Microsoft Learn blog. Use of this code is on a first come, first served basis, and the available discounted seats for beta exams often fill quickly. If you want to take advantage of the discount, monitor the Microsoft Learn blog and register as soon as possible.

Note: If you miss the discount opportunity, you can still take a beta exam at full price.

How the discount works

Candidates who register for **and take** the exam using the eighty percent discount code receive a twenty-five percent discount from the exam provider on their next exam once rescoring is complete--approximately two weeks after the exam goes live. Twenty-five percent discount vouchers will be sent to the email address used to register for the exam. If you don't receive your twenty-five percent discount voucher within six weeks of the exam live date, contact the exam delivery provider's customer support.

Note: If you pay for the beta exam using any other method (e.g., you pay for the exam yourself or use a voucher), you are not eligible for the twenty-five percent discount voucher. This is not a benefit of simply taking the beta exam.

Increase your chance of taking the discounted beta exam

To increase your chance for securing a discounted seat in a beta exam, consider adding yourself to our SME Profile database. Qualified participants will receive an email containing a different code from the one posted on the blog. Although the seats are limited with this code as well, because the group of people who have access to it is smaller, the probability of getting a seat with this code is higher than with the one you'll find on the Microsoft Learn blog.

For some exams, we have many more qualified candidates in the SME Profile database than we have available seats. In these cases, we randomly select an appropriate number of qualified candidates and send an invitation. If you aren't selected, you can still participate by using the code in the Microsoft Learn blog if seats are available.

If you don't get the discount but still want to participate in the beta

We understand some candidates may want to take the exam early to meet job requirements, career growth needs, or demonstrate they are early adopters of (and competent in) the covered technology. If you'd like to take the beta exam but did not get a discounted seat, you may take the exam by registering and paying regular price.

Keep in mind:

- Only candidates who have experience with the technology should participate in beta exams.
- The code can only be used for exams delivered during that 3–4-week window. If you attempt to schedule the exam outside that window, the code will not work.
- Candidates located in China, India, Pakistan, or Türkiye are not eligible to participate in beta exams for security reasons.

Pass the beta exam, earn a Certification

Passing a beta exam in the Certification path counts toward your Certification. You don't need to retake the exam in its final version. Make sure that you take another exam within a year so you can take advantage of the 25 percent discount earned for taking the beta exam through our discount program (if applicable).

If you don't pass the beta exam, you must wait until the exam goes live to retake it. If you're interested in earning a Certification that requires successful completion of that exam, you must wait to retake the exam at regular cost when it's live, or apply the 25 percent discount you received for taking the beta exam through our discount program (if applicable).

If you believe your beta score should be available (because it's at least 10 days after the exam is live), visit your Learn profile and choose Certifications from the profile menu. If it's not there, contact the exam delivery provider. If at least two weeks have passed since the exam went live and your score hasn't appeared in your Learn profile, contact Credentials support.

Preparing for a beta exam—with no prep materials

The Exam Details page lists the skills to be assessed on the exam. Although our goal is to provide some training materials prior to launching a beta exam, it's not always possible. People qualified to take beta exams are experienced in the job role, have access to other resources, or have access to early releases of the technology. We recommend consulting peers, community resources, and early-adopter articles for preparation materials.

For more suggestions and ideas on how to prepare for beta exams without preparation materials, see: Just How Does One Prepare for Beta Exams without Preparation Materials?.

Beta exam scoring and results

When you complete a beta exam, you won't receive a score immediately because the scoring model for the exam is not yet finalized.

If you've taken a beta exam, you'll receive your score about 10 days after the exam becomes available worldwide or *"goes live"* -- approximately 10-12 weeks after the beta period **begins**. This time reflects a comprehensive process including statistically analyzing results and data, evaluating the performance of each question and reading and evaluating all comments provided during the beta exam. As a result, you may not receive a score for 14 weeks depending on when in the beta process you took the exam. Please note that the beta exam process and the time it takes to receive your results may vary.

About Applied Skills beta assessment labs

We work hard to ensure our Applied Skills assessment labs are technically accurate and relevant to real-life workplace situations, and we perform a beta process similar to what we do for Certification exams. Currently, however, this process is not publicly available.

Exam development

Article • 09/19/2023

About exam development

Microsoft Certification exams are carefully developed with input from industry professionals to reflect the skills needed to be successful in critical job roles that leverage Microsoft technology to support an organization's digital transformation objectives.

These are the steps we take as we develop each exam:

1. Define the skill domain. Experts identify the critical tasks performed within specific job roles or functions that leverage Microsoft technologies and solutions.
2. Define the distribution of skills on the exam. The skills identified in step one are evaluated by additional technical and job experts from around the world. Their evaluation becomes the blueprint that defines the distribution of questions across the skill domain.
3. Write the exam questions. Subject matter experts (SMEs) write exam questions to measure the critical skills according to the distribution defined by the blueprint created in step two.
4. Evaluate the accuracy, clarity, appropriateness, etc. of each question (alpha review). A panel of experts who did not write the questions reviews each one for technical accuracy, relevance, and alignment to the skill domain during the alpha review.
5. Beta test the questions. The alpha-reviewed questions are then pilot tested in an exam-like situation known as a "beta exam." This ensures that only the best content is included in the live exam. Visit: Beta exams for more information.
6. Finalize the question pool. The results of the beta exam are psychometrically analyzed for factors such as difficulty, ability to differentiate high and low performers, reliability, and more. Only those questions that meet Microsoft's psychometric criteria will appear on the live exam.
7. Set the cut score. A panel of experts works with Microsoft's psychometrician to determine a passing score. This score is based on the skills needed to be considered competent in the skill domain in relation to the difficulty of the questions included on the exam.
8. The exam is available worldwide through our exam delivery partners who administer the certification exam. The exam can be taken at testing centers worldwide or through online proctoring where available.
9. Sustain/maintain over the life of the exam. Microsoft monitors the psychometric performance of the exams throughout their lifetime, ensuring that they continue to

be valid and reliable measures of the skill domain. Questions that no longer perform psychometrically are removed, and new questions are added as features and functionality are updated and/or to replace questions removed for psychometric reasons or because of changes in the technology. Sometimes exams are retired. Visit: Exam retirement to learn more.

Certifications for students

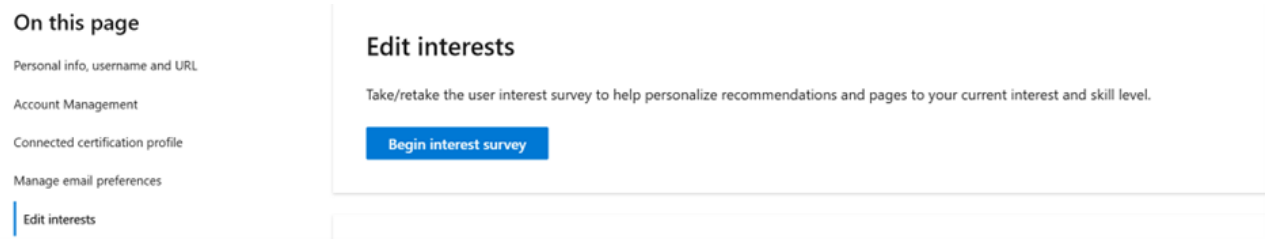
06/30/2025

Student discounts

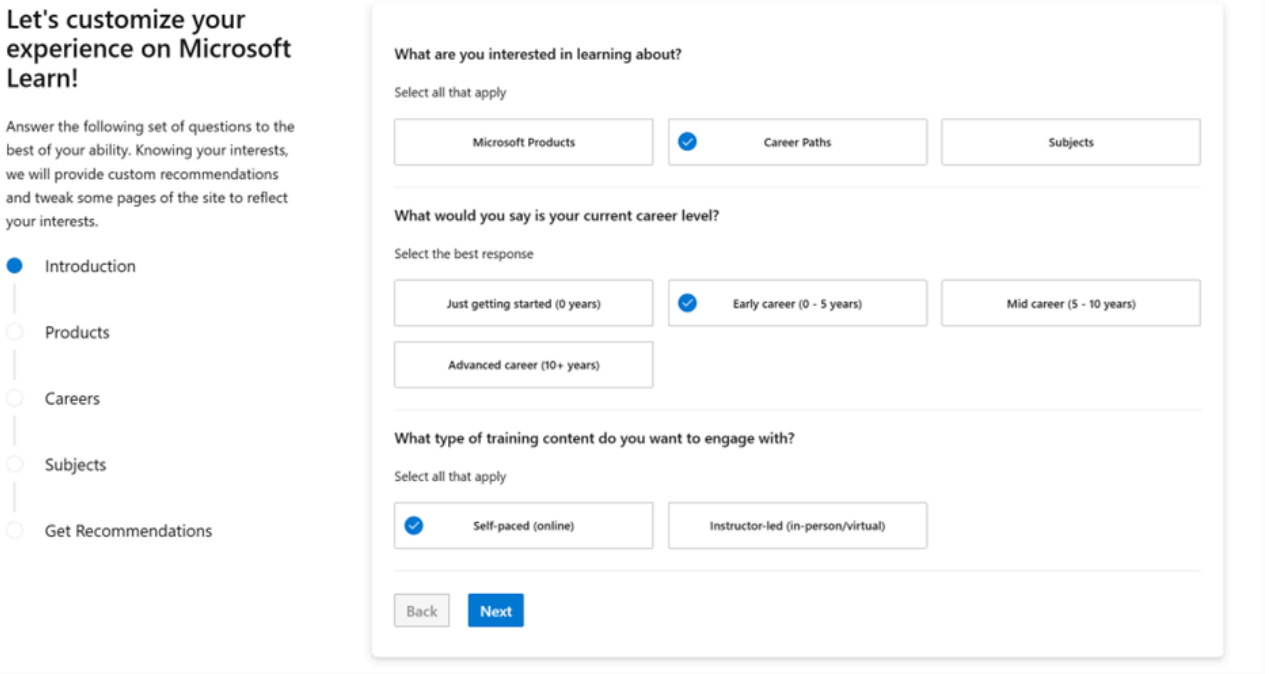
We're pleased to offer academic pricing on Microsoft Certification exams in most countries/regions (except India and China). To qualify, identify yourself as a student in your certification profile and verify your academic status. Once verified, you'll receive the student discount when registering for an exam.

Identify yourself as a student in your certification profile

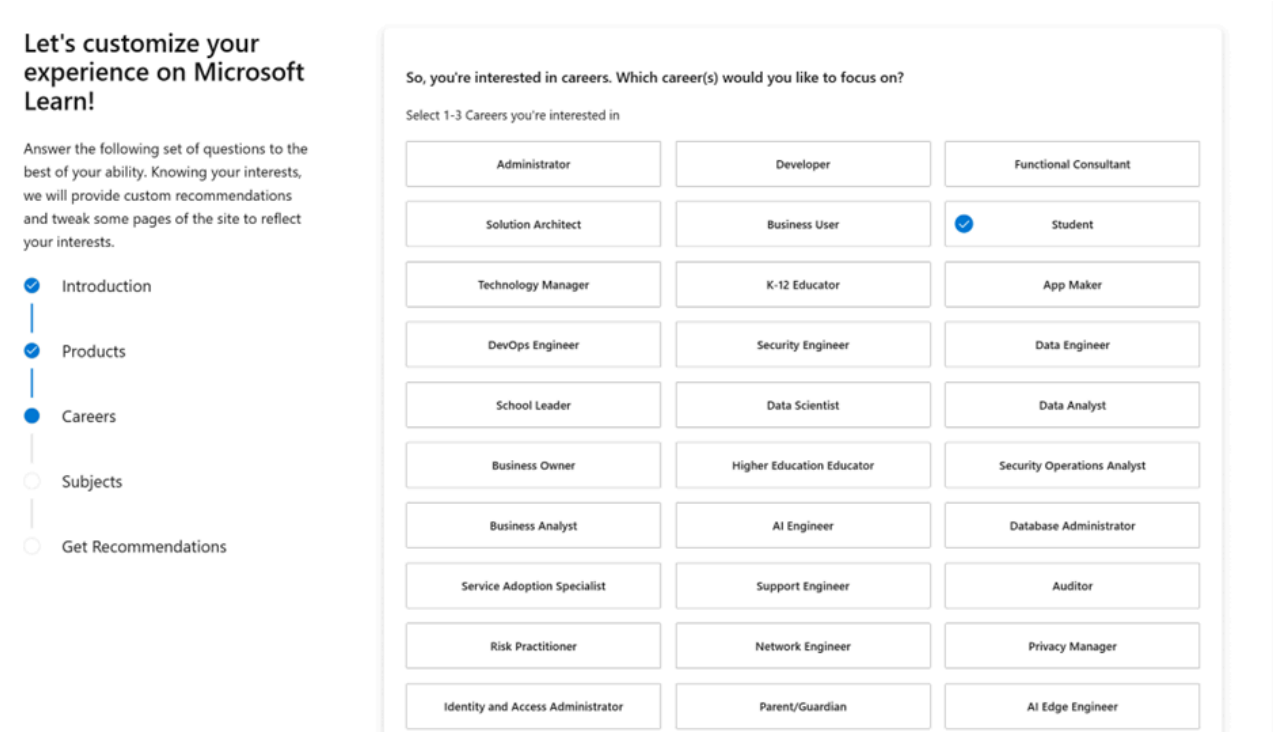
1. Login to your Learn Profile and begin the interest survey.



2. Select "Career Paths".



3. Select "Student".



4. Complete the rest of the Interest Survey and click "Finished" when completed.

Get help with student discounts

Visit: Credentials Support.

College credit for certification exams

Article • 07/15/2024

Earn college credit

Students may receive college credit after completing the requirements for earning some Microsoft Certifications. All eligible Microsoft certifications is listed at https://aka.ms/ACECollegeCredit.

ACE college credit

The American Council on Education (ACE) is a membership organization for U.S. accredited, degree granting institutions that mobilizes the higher education community. ACE is a nationally recognized leader in the evaluation of workforce and military training, providing standards, practices, and tools that higher education institutions rely on.

Many colleges and universities across the nation, including two-year, four-year, public, and private colleges and universities recognize ACE credit recommendations, like Microsoft certifications, as applicable toward a post-secondary degree or certificate.

ACE has reviewed and established credit recommendations for several Microsoft Certification exams. You can see the full list at https://aka.ms/ACECollegeCredit

For more information about ACE, visit https://www.acenet.edu/Programs-Services/Pages/Credit-Transcripts/Students.aspx.

How to send an official transcript to your college or university?

Most institutions consider a certification or transcript official only if it comes from the organization awarding the certification. In other words, you shouldn't email a copy or attachment of your certification or transcript. Instead, you must send your Microsoft Learn transcript via a verifiable link to your college or university.

To apply for certification credit hours for your Microsoft Certification, you'll need to email the following information to your school:

1. a link to the applicable certification exam title and
2. a verifiable link to your official Microsoft Learn transcript.

To do this:

1. Contact your college or university to determine the appropriate recipient and necessary contact information for receiving your Microsoft Learn transcript.
2. Sign into your Learn profile (or create a Microsoft Learn profile if you haven't).
3. Select *"Transcript"* from the menu on the left.
4. Select *"Transcript Settings"* and then select *"Show legal name"* and *"Show contact email."*
5. If you are sharing a link for the first time, select *"Share link"* and then select *"Create link."* If you've previously generated a link, select *"Copy link."*
6. Paste the link to your Microsoft Learn transcript into an email addressed to the appropriate contact at your college or university. Before sending the email, please refer to the ACE reviewed Microsoft certification exam at https://aka.ms/ACECollegeCredit) and copy the link for the exam title corresponding to the credential you have earned. Make sure to include this certification exam link in the email to your college or university, along with the link to verify your Microsoft Learn transcript.

Frequently Asked Questions:

How do I receive college credit for a Microsoft Certification?

The American Council on Education (ACE) has reviewed and established credit recommendations for select Microsoft Certifications. Upon earning a credential for an ACE recommended exam, you can send a verifiable link of your official Microsoft Learn transcript to your ACE member college or university and request credit for your certification.

Can I email a copy of my transcript as an attachment to my college or university?

No. You should send a verifiable link to your official Microsoft transcript to request credit. Most institutions consider a transcript official only if it comes from the organization awarding the certification.

Can I still use my Credly transcripts to request college credit for my Microsoft Certification?

Only certifications earned and claimed on Credly prior to June 30, 2023, will be available on the Credly transcripts for sharing.

How do I know if my college or university is an ACE member school?

Check the ACE Members and Associates Directory.

Do colleges and universities accept ACE credits if they aren't an ACE member school?

Yes. Membership isn't required to accept ACE credit recommendations. Many colleges and universities accept ACE credit recommendations as transfer credit! You should check with the admissions or registration team at your school of choice to determine their acceptance policies.

Credential expiration policies

Article • 07/15/2024

Role-based and specialty Certifications expiry

Microsoft role-based (associate and expert) and specialty Certifications are valid for one (1) year from the date that you complete all requirements to earn that Certification.

To prevent your Certification from expiring you must renew the Certification before the Certification expiration date. For more information about Certification renewals, visit Renew your Certification. After the Certification expires, you will no longer be able to renew that Certification and will need to re-earn the Certification by passing all the required exam(s).

Fundamentals Certifications expiry

Microsoft fundamentals Certifications do not expire.

Other Microsoft Certifications expiry

MOS, MTA, MCSA, MCSD, MCSE, and MCE Certifications do not expire.

Beta exam Certification expiry

If you passed a beta exam and earned a Certification as a result, your Certification achievement and expiration dates will be based on the date that your beta exam was rescored (approximately 10 days after it goes live). This ensures that you have sufficient time to renew your Certification after earning it.

Applied Skills credential expiry

Microsoft Applied Skills credentials do not expire.

Expiration of Certification and Applied Skills credentials based on technology changes

Technology is evolving, and some Certifications and Applied Skills become outdated and obsolete. To ensure that all Microsoft credentials remain relevant, valid, and meaningful, Microsoft reserves the right to retire exams, Certifications, and Applied Skills credentials at any time.

When a credential is retired, it will no longer be available for new candidates to earn. However, the credential will remain in the Active section of your transcript until it expires (if it has an expiration date) or for two years following the retirement of the credential (if it doesn't have an expiration date).

Challenging a Certification exam or renewal assessment item or an assessment lab task

Article • 05/27/2025

Microsoft Certification exams, GitHub Certification exams, certification renewal assessments, and Applied Skills assessment labs are designed to ensure that candidates who earn and maintain our credentials have demonstrated the required proficiency level across the skill domain. Each Microsoft and GitHub Certification exam, renewal assessment question, and assessment lab task is carefully reviewed by a panel of technical and job experts for technical accuracy, clarity, and relevance. If you believe that a question on a Microsoft or GitHub Certification exam or renewal assessment or an assessment lab task is inaccurate, you may request an evaluation of the question or task via the challenge process, designed to help identify and correct problematic questions and tasks. However, even if a question or task are flawed in some way, we cannot assume that you would have answered it correctly if it had not had that flaw, therefore most challenges do not result in a change in your exam or assessment result.

Criteria for accepting a challenge:

- The certification exam, renewal assessment, or assessment lab must have been taken within the last 15 calendar days (not business days).
- You are challenging a specific item on the exam or renewal assessment or task on the assessment lab.

Challenges will not be accepted for the following criteria:

- Challenges to the entire exam, renewal assessment, or assessment lab.
- Challenges based on study materials (practice tests, study guides, training materials, etc.).
- Challenges to the appropriateness of a question or task.
- Submission is more than 15 calendar days (not business days) after the exam was taken.
- Challenges based on technical issues experienced at a testing center or on Microsoft Learn.
- Challenges related to being unable to finish the exam or assessment lab as a result of taking unscheduled breaks.
- Challenges that are not submitted via this process.

- Challenges to the scoring methodologies (e.g., The bar graph does not represent my actual score.).
- Challenges to the exam, renewal assessment, or assessment lab format (standard, sort, adaptive).
- Challenges to beta exams.

Challenge process:

1. Review our criteria for accepting and not accepting a challenge.
2. Complete and submit the Microsoft Certification item challenge form or the GitHub Certification item challenge form.
3. The Microsoft Credentialing team will review your submission for completeness. If incomplete, you will be asked to provide more information. If complete, the Microsoft Credentialing team will review. A review takes approximately two weeks.
4. Once the review is complete, you will be notified of the outcome.

Thank you for your interest in helping make Microsoft and GitHub Certification exams, Certification renewals, and Applied Skills assessment labs as valid and relevant as possible.

If you'd like to comment on the technical accuracy of a practice assessment question, do **not** use the item challenge process. Use the Microsoft Practice Assessment Challenge form or GitHub Practice Assessment Challenge form instead.

If you would like to provide feedback about on the Practice Assessment experience, use the Practice Assessment feedback form.

Exam and assessment lab security policy

Article • 10/25/2023

About exam and assessment lab security

We make every attempt to ensure the security of our credentials and testing process. As part of this, we will take actions such as banning candidates, revoking scores and credentials, and asking candidates to retake exams and assessment labs if we suspect fraudulent activity.

Ethical Conduct

The purpose of the Microsoft Credentials Program is to determine a person's ability to perform a specific job role or a set of tasks. Accordingly, all candidates are expected to pass the exam or assessment lab on their own merit without assistance from another person or entity (BOT, AI assistance) and are expected to maintain confidentiality of the validation content. Candidates are expected to abide by these ethical standards and to read, understand, and comply with our security rules. The obligation to abide by these ethical standards includes a commitment to honesty, truthfulness, full disclosure, accuracy, fairness, and integrity in all matters pertaining to the exam or assessment lab.

Microsoft Candidate Agreements

The Microsoft Certification Program requires candidates to accept the terms of a Microsoft Certification Exam Candidate Agreement before taking an exam, and the Microsoft Applied Skills Program requires candidates to accept the terms of a Microsoft Applied Skills Assessment Lab Candidate Agreement before attempting an Applied Skills assessment lab.

These agreements legally require candidates to keep information related to exam or assessment lab content confidential. Requiring the acceptance of the Agreement helps protect the security of Microsoft Certification exams, Applied Skills assessment labs, and the integrity of the Microsoft Credentials Program by legally discouraging piracy and/or unauthorized use of exam content.

Confidentiality of exam and assessment lab content

All content on exams and assessment labs represents confidential intellectual property of Microsoft. Obtaining, using, or distributing this content is strictly prohibited, regardless of the method employed (memorization, recording, copying, or other means). This prohibition includes discussion, distribution, or online posting of remembered assessment topics or solutions, in whole or in part. The use or sharing of any exam or assessment lab content violates the rules of conduct of the Microsoft Credentials Program. Such activities could provide an unfair advantage and threaten the validity and credibility of the program.

Microsoft Certification exam testing center security

Staff at testing centers are provided with security policies that must be enforced to acquire and maintain testing center status. Ongoing inspections ensure that each testing center maintains the security outlined by Microsoft and the exam delivery provider. In addition, proctors at testing centers are authorized to immediately take appropriate measures against candidates who violate testing rules. If you have concerns about the security of your exam experience, complete this form.

To ensure the security of Microsoft Certification exams, testing center administrators ensure that the identification provided is appropriate and verify that it is the ID of the person who appeared to take the exam; walk through the testing area periodically; keep partitions between testing stations; remove crib sheets, electronic devices, and other unauthorized materials, and prevent the removal of exam content in any shape or form. In addition, test center administrators and proctors cannot provide any type of aid regarding any exam question. They can help resolve technical issues but cannot assist in the understanding or answering of any exam question.

Microsoft may suspend testing at any test center where security problems are suspected, including any test centers that might be affiliated with those under suspicion.

Certification exam unscheduled breaks security

You may take unscheduled breaks during all exams, except Microsoft Office Specialist (MOS) exams, without requesting them in advance through the accommodation request process. However, Microsoft's security policies apply while you are on break. This means that you cannot access any unauthorized materials during your break. If the proctor sees you doing so, your exam will be revoked. To learn more about prohibited behaviors during exams, review the OnVUE guide.

Identification (ID) requirements for taking Microsoft exams

All test takers are required to present one form of original (no photocopies), valid (unexpired) government issued ID with name, photo, and signature. The first and the last name that the test taker uses to register must match exactly the first and last name on the ID that is presented on test day.

For additional information, refer to the Pearson VUE ID Policy.

Microsoft Certification exam out-of-country/region testing

To sit for a Microsoft Certification exam at a testing center in India, China, or Pakistan, you must be a legitimate resident of that country. If you are a legitimate resident of one of these countries, testing centers are required to confirm and record that you have shown documented proof that you are a legitimate resident of that specific country. To verify country of residence status, you are required to present one form of an original (no photocopies), valid (unexpired) government issued ID with your name, photo, and signature.

If you are not a legitimate resident of India, China, or Pakistan, you will **not** be allowed to sit for a Microsoft Certification exam within that country.

If you do not have an ID that meets the requirements of the ID policy and would like to request an exception, or if you are a candidate testing outside your home country/region, please contact Pearson VUE support. Any candidate exceptions to the ID or out of country/region policy must be pre-approved by the Pearson VUE customer service center at least three business days before the scheduled exam appointment.

Right of exclusion

Based on security and integrity concerns, Microsoft reserves the right to exclude specific regions, countries, and testing centers from the Microsoft Credentials Program altogether.

Data forensics

Microsoft will use data forensics (statistical evidence improper activity during an exam) to cancel exam scores, revoke Certifications, ban candidates, close test centers, and take

any other appropriate action to protect the integrity of the Microsoft Credentials Program.

Candidate retesting at request of Microsoft

Microsoft reserves the right to ask any candidate to retest for any suspected fraudulent activity or anomalous testing patterns at any time.

Revoking Credentials and Candidate Bans

If a candidate violates any rule, policy, or term within the Microsoft Certification Exam Candidate Agreement or the Microsoft Applied Skills Assessment Lab Candidate Agreement, or engages in any misconduct that diminishes the security and integrity of the Microsoft Credentials Program in any way, the candidate may be permanently prohibited from taking any future credentials and may be banned from Microsoft's Credential Program. In addition, the candidate may have any credentials (Certifications or Applied Skills) and scores revoked.

Examples of such misconduct, misuse, and fraud include, but are not limited to, the following:

- Using AI in any way during the exam or assessment lab.
- Falsifying modifying, and/or altering the original results/score reports for any exam or assessment lab record.
- Using unauthorized material in attempting to satisfy credential requirements (this includes using brain dump material and/or unauthorized publication of exam questions or assessment lab tasks with or without answers).
- Providing or accepting improper assistance.
- Falsifying identity or impersonating another individual to gain access to or attempt an exam or assessment lab.
- Copying, publishing, disclosing, transmitting, selling, offering to sell, posting, downloading, distributing in any way, or otherwise transferring, modifying, making derivative works of, reverse engineering, decompiling, disassembling, or translating any lab material in whole or in part, in any form or by any means, verbal or written, electronic or mechanical, for any purpose.
- Disclosing Microsoft intellectual property (IP).
- Disseminating actual exam or assessment lab content.
- Using the exam or assessment lab content or platform in any manner that violates applicable law or does not align with the requirements of the exam or assessment lab.
- Violating the retake policy.

- Cheating during the exam (such as looking at the monitors of other exam takers, using an unauthorized device, or looking at notes).
- Bringing non-authorized items into the testing center during an exam session (such as notes or unauthorized materials and electronic devices, such as cell phones).
- Violating the Microsoft Certification Exam Candidate Agreement or the Microsoft Applied Skills Assessment Lab Candidate Agreement in any way.

Candidate appeal process

Candidates may appeal their ban by submitting an appeal to mlsecure@microsoft.com within 14 calendar days of receiving notice from Microsoft (as established by the date the notification was sent by Microsoft). Any appeal requests submitted after that time will not be reviewed or granted.

The Microsoft Worldwide Learning Security Team will review all submitted appeal requests, conduct a thorough investigation of each specific case, and will communicate directly with the candidate regarding the conclusion of the investigation and final appeal decision.

A candidate may appeal a ban for falsifying a score report by submitting the original report (no scans or electronic copies) to:

Microsoft Worldwide Learning Security Team
One Microsoft Way
Redmond, WA 98052

Examples of fraudulent activity

Fraudulent activity is anything that enables an unqualified candidate to pass an exam or assessment lab. This type of egregious misconduct negatively affects the integrity of the Microsoft Credentials Program. Examples of fraudulent activity include, but are not limited to using AI to assist you during the exam or assessment lab, proxy testing, using brain dump sites to prepare for the exam or assessment lab, stealing content to share with others, falsifying score reports, etc.

Proxy testing is when someone takes an exam or assessment lab for another candidate. Some companies offer proxy testing, guaranteeing that you will pass the exam or assessment lab without having to take it. This is fraudulent activity.

A brain dump is a source, such as a website, that contains exam questions or assessment lab content that has been fraudulently obtained with the intention to share it with or sell

it to other candidates. The content included in brain dumps is exactly the same or substantially similar to what appears on the exam or assessment lab. Because the exam or assessment lab content was fraudulently obtained, using this type of material to prepare for or during an exam or assessment lab constitutes cheating. Brain dump providers are in violation of Microsoft intellectual property rights and candidate agreements. If you think you have discovered a brain dump site with Microsoft content, please complete this form.

Falsified score reports are reports that Microsoft deems to be inauthentic or that deceive or defraud others in any way. If Microsoft determines that a candidate has falsified a score report, the candidate will be ineligible to take any future Microsoft exams and/or assessment labs and his or her credentials may be revoked.

Exam and Applied Skills assessment lab retake policies

Article • 10/25/2023

Microsoft Certification exam retake policy for role-based, specialty, and fundamentals exams

- If you don't pass an exam the first time, you must wait 24 hours before retaking it.
- A 14-day waiting period is imposed between all subsequent attempts (up to 5).
- You may not take a given exam more than five (5) times within a 12-month period from the first attempt. If you failed the exam 5 times, you'll be eligible to retake it again 12 months from the date of your first attempt.
- You cannot retake an exam you've passed unless your Certification has expired.
- You must pay to retake the exam (if applicable.)

Submit a request for an exam retake inside the waiting period

You may request a waiver of the retake waiting period if you experienced internet connectivity issues or equipment failure during the exam and a Pearson VUE case was created. Waivers will not be granted for any other reason.

Waiver requests **must** include the Pearson VUE case number to confirm that you are eligible.

To request the waiting period to be waived, please contact Training, Certification, and Program Support (microsoft.com). **If you did not experience an internet connectivity issue or equipment failure, you do not qualify for a waiver of the waiting period.**

If you need assistance rescheduling your exam, please contact Pearson VUE Customer Support - Customer service :: Microsoft :: Pearson VUE.

Microsoft Certified Educator (MCE) exam retake policy

- If you don't pass a Microsoft Certified Educator (MCE) exam the first time, you must wait 24 hours before retaking the exam.

- If you don’t pass the second time, you must wait seven (7) days before each subsequent attempt (up to 5).
- You may not take a given exam more than five (5) times within a 12-month period from the first attempt. If you failed the exam 5 times, you’ll be eligible to retake it again 12 months from the date of your first attempt.
- You cannot retake an exam you’ve passed unless your Certification has expired.
- You must pay to retake the exam (if applicable.)

Microsoft Office Specialist (MOS) exam retake policy

- If you don’t pass a Microsoft Office Specialist (MOS) exam the first time, you must wait 24 hours before retaking it.
- If you don’t pass the second time, you must wait 2 days (48 hours) before each subsequent exam retake.
- There is no annual limit on the number of attempts on the same exam.
- If you pass an Office exam, you may take it again.

Beta exam retake policy

- Beta exams may be taken only once during the beta period.
- If you pass a beta exam (determined after the beta period ends), it meets the requirement for the associated Certification. (Other exams may be required to earn the Certification, however.)
- If you fail the beta exam, it can be retaken once the exam is live. If you fail the exam once it’s live, the general retake policy stated above applies to all subsequent attempts.
- This policy supersedes the general retake policy.

Applied Skills assessment lab retake policy

- You can retake an assessment lab by selecting the appropriate assessment lab from your profile 72 hours after your last attempt.
- Your profile will display all assessment attempts, including the date, score, and any relevant details. However, only passed assessment labs will appear on your transcript.
- Note that a cancelled lab or one that ends abruptly for any reason will be scored. As a result, this counts as an attempt, and you will need to wait for 72 hours before retaking the assessment lab.

Reschedule and cancellation policies

Article • 02/09/2024

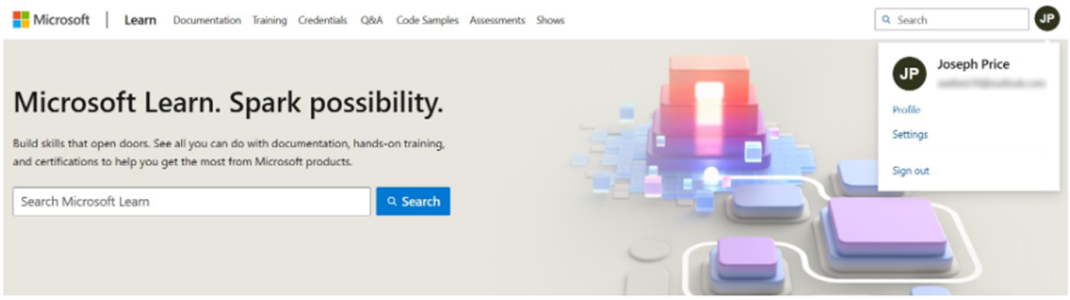
Rescheduling and cancellation policy details

Be sure to reschedule or cancel exam appointments at least 24 hours before your scheduled exam or your fee will be forfeited. If you used a company-purchased voucher, the voucher will be forfeited. If you no-show for your exam appointment, your Company may be charged a no-show Fee. Visit registering and scheduling an exam to review the latest updates to the exam scheduling policy.

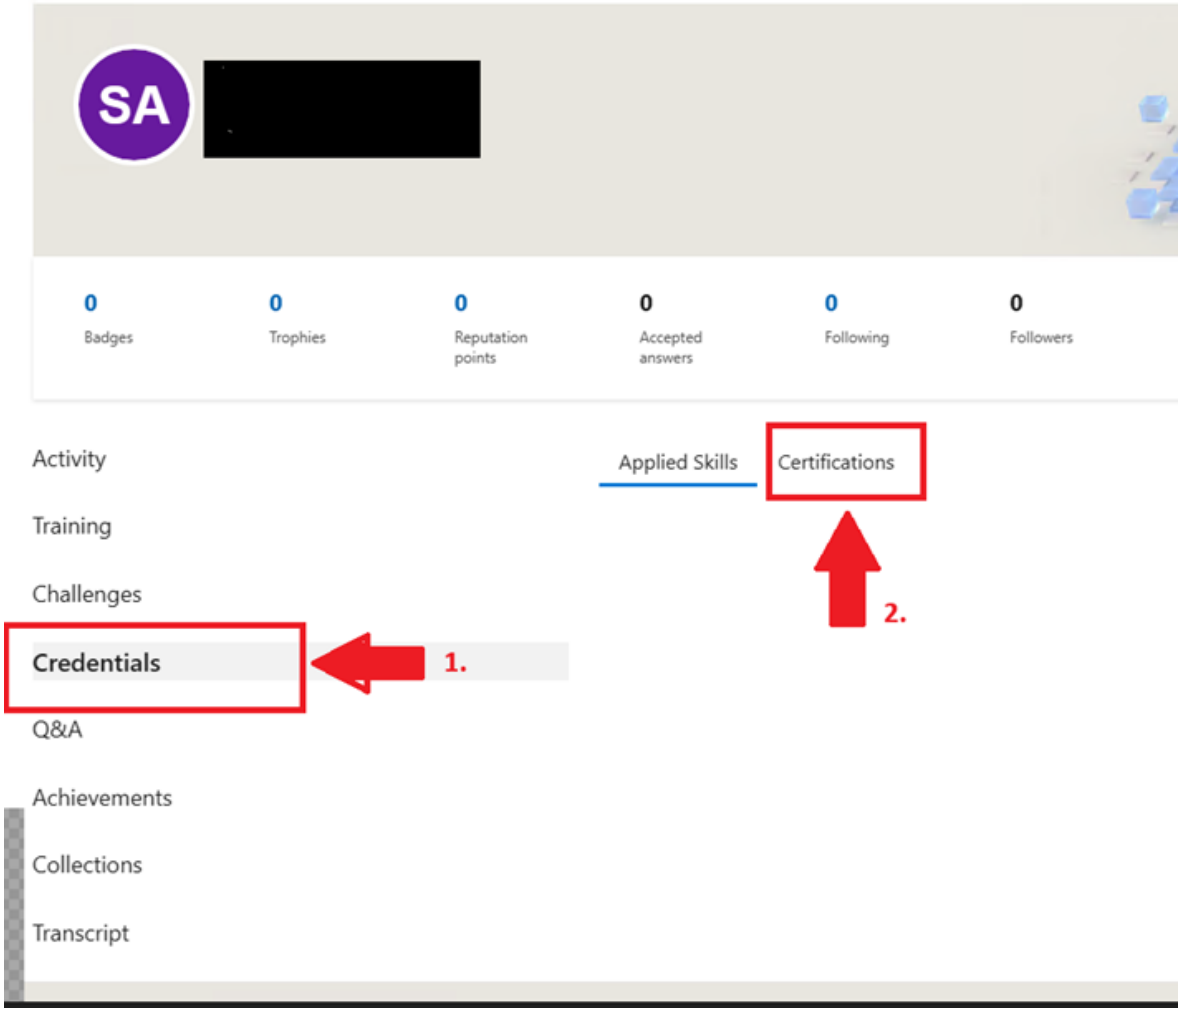
How to reschedule or cancel your exam

Reschedule or cancel your exam appointment via your Learn profile.

1. Log in to your Learn profile and choose *Profile* from the dropdown menu in the photo avatar.



2. Go to *Credentials* in the profile menu and select *Certifications* beside Applied Skills.



3. Scroll to the exam appointment you wish to cancel or reschedule and choose either the *"Cancel"* or *"Reschedule"* link.

4. You will be redirected to the exam delivery provider's site to cancel or reschedule your exam.

Microsoft Credentials Program Agreement

Article • 11/08/2023

Please read this Microsoft Credentials Program Agreement (the **"Agreement"**) carefully. This Agreement is by and between you (**"you"** or **"your"**) and Microsoft Corporation, a Washington Corporation located at One Microsoft Way, Redmond, WA, 98052, USA together with its affiliates (**"Microsoft"**) regarding your participation in the Microsoft Credentials Program (the **"Program"**).

BY REGISTERING FOR OR TAKING A MICROSOFT EVALUATION YOU AFFIRM THAT YOU ARE OF LEGAL AGE IN YOUR JURISDICTION TO ENTER INTO AN AGREEMENT WITH MICROSOFT, AND YOU AGREE TO BE BOUND BY THE TERMS AND CONDITIONS OF THIS AGREEMENT AND ALL TERMS INCORPORATED BY REFERENCE HEREIN AND YOU ACKNOWLEDGE THAT YOU HAVE REVIEWED THE MICROSOFT PRIVACY STATEMENT. IF YOU DO NOT AGREE TO THE TERMS AND CONDITIONS OF THIS AGREEMENT AND ALL TERMS INCORPORATED BY REFERENCE HEREIN, YOU CANNOT PARTICIPATE IN THE PROGRAM AND YOU SHOULD NOT CLICK THE CHECKBOX, REGISTER, OR TAKE THE EVALUATION. THE "EFFECTIVE DATE" OF THIS AGREEMENT IS THE DATE UPON WHICH YOU CLICK THE CHECKBOX, REGISTER, OR TAKE THE EVALUATION, AS APPLICABLE.

In consideration of the mutual covenants, terms and conditions set forth herein, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, you and Microsoft hereby agree as follows:

1. Program Overview. The Program's goal is to provide eligible participants with opportunities to earn (and, as applicable, maintain and renew) Microsoft Credentials. "**Microsoft Credentials**" means, collectively, the credentials listed at https://learn.microsoft.com/en-us/credentials/browse/ or any successor site thereto (as updated from time to time, "**Certifications**" or "**Applied Skills**"). Upon entering into this Agreement and for the duration of the Term (as defined below), you will be eligible to enroll in and take the Program-designated Exams and Assessments ("**Evaluations**") for Microsoft Credentials and, subject to you passing any applicable required Evaluations and complying with any applicable Credential-Specific Requirements (as defined below), and provided that Microsoft has not discontinued the applicable Microsoft Credential, earn, maintain and renew (as applicable) Microsoft Credentials. Evaluations applicable to Applied Skills are herein referred to as "**Assessments**" and Evaluations applicable to Certifications are herein referred to as "**Exams**". You will only seek to take Evaluations or earn, maintain, or renew Microsoft Credentials for so long as you meet the eligibility

criteria set forth in Section 1. This Agreement hereby incorporates by reference the Exam and Assessment policies and procedures (the "**Evaluation Policies**") set forth at https://learn.microsoft.com/en-us/credentials/certifications/certification-exam-policies (in each case, or any successor site thereto and as updated form time to time). Such Microsoft Credential-specific requirements and the Evaluation Policies are collectively referred to as the "**Credential-Specific Requirements**". As used herein, "**Holding**" (or to "**Hold**" or have "**Held**") a Microsoft Credential at any time during the Term means that, with respect to such Microsoft Credential, you have passed all applicable required Evaluations and are then in compliance with all applicable Credential-Specific Requirements (including with respect to maintenance and renewal), and Microsoft has not discontinued such Microsoft Credential. For clarity, participation in the Program includes any or all of: accessing and using Program Content (as defined below), scheduling and taking Evaluations, receiving a Transcript, Holding, using, or disclosing any Microsoft Credentials, and receiving a certificate or Verified Credential (as defined below). Your use of Microsoft Learn in connection with the Program is governed by the terms of use referenced within the Microsoft Learn website. You acknowledge that Microsoft may contact you in connection with the Program. You acknowledge that Microsoft Learn may require the payment of registration fees for Evaluations.

2. Changes. Microsoft may change this Agreement (including the Credential-Specific Requirements) from time to time by notifying you of such changes by any reasonable means. Any such changes will not apply to any dispute between you and Microsoft arising prior to the date on which Microsoft posted the revised Agreement incorporating such changes, or otherwise notified you of such changes. Your participation in the Program following any changes to this Agreement will constitute your acceptance of such changes. The "Last Updated" legend above indicates when this Agreement (including the Credential-Specific Requirements) was last changed. Microsoft may, at any time and without liability, modify or discontinue all or part of the Program, including Microsoft Credentials, Program Content and their availability, and Credential-Specific Requirements at any time without liability to you or any third party. Notwithstanding anything to the contrary herein, in the event Microsoft adds new requirement(s) to the Credential-Specific Requirements for a Microsoft Credential that you Hold at the time of such modification, your failure to comply with such new requirements will not result in your loss of the applicable Microsoft Credential until three (3) calendar months after the date that Microsoft added such requirement(s) to the applicable Credential-Specific Requirements.

3. Transcripts. You can track the Microsoft Credentials that you Hold, including Microsoft Credentials that have expired, through the Program transcript available

in your https://review.learn.microsoft.com/en-us/credentials/certifications/manage-certification-profile (the "**Transcript**"). While Microsoft makes efforts to maintain the timeliness and accuracy of Transcripts, it does not guarantee that Transcripts are or will remain updated, complete, or correct, or that access to Transcripts will be uninterrupted. You are responsible for periodically reviewing your Transcript to ensure it accurately reflects the Microsoft Credentials you Hold at any given time. If you believe your Transcript is inaccurate, you have up to one (1) year from the date you passed the last Evaluation necessary to Hold the applicable Microsoft Credential(s) to submit a request to Microsoft for evaluation of your fulfillment of such Microsoft Credential(s). Transcripts, together with Evaluations and any content that you are eligible to access or receive as a Program participant are collectively referred to as "**Program Content**".

4. Suppliers. Participation in certain elements of the Program may require you to engage with and/or remit fees to third party Evaluation providers ("**Suppliers**"). Any such interactions may be subject to and governed by the terms, conditions, rules, and policies of the applicable Supplier(s) ("**Supplier Terms**"), and you acknowledge that certain aspects or benefits of Program may not be available unless you agree to the applicable Supplier Terms. To the extent Supplier Terms grant you any rights or licenses to particular content owned or controlled by Supplier (such content, the "**Supplier Content**"), such Supplier Content is governed solely by, and your rights and licenses in and to such Supplier Content are solely as set forth in, the applicable Supplier Terms. Except regarding Supplier Content and notwithstanding anything to the contrary in any Supplier Terms, your participation in the Program is governed by this Agreement (including the Credential-Specific Requirements). WITHOUT LIMITATION TO SECTION 7(C), MICROSOFT EXPRESSLY DISCLAIMS ALL WARRANTIES, WHETHER EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, WITH RESPECT TO SUPPLIER CONTENT AND SUPPLIERS' ACTS OR OMISSIONS.

5. Use and Ownership of Program Assets.

   a) **Licensed Content.** Subject to your compliance with the terms and conditions of this Agreement, Microsoft hereby grants to you a revocable, worldwide, fully paid-up, royalty-free, non-transferable, non-sublicensable, non-exclusive license to use Program Content excluding Supplier Content ("**Licensed Content**") during the Term, solely in unaltered form and solely for purposes of participating in the Program. The license granted in this Section 5(a) is conditioned on you taking any and all steps reasonably necessary to ensure the confidentiality and security of Program Content and to protect the intellectual property rights of Microsoft in and to Program Content.

b) **Restrictions.** You will not, and will not allow any other person or entity to:
(i) record, modify, alter or create derivative works of Licensed Content;
(ii) distribute, copy, display, publish, summarize, photograph, record, download, transmit or post Licensed Content or any other Evaluation Related Information (as defined below);
(iii) work around any technical limitations or restrictions in Licensed Content;
(iv) sublicense, assign, distribute, publish, transfer or otherwise make Licensed Content available to third parties;
(v) attempt to discover any trade secrets related to Licensed Content or any proprietary materials of Microsoft;
(vi) access or use Licensed Content in any manner or for any purpose that infringes, misappropriates or otherwise violates any intellectual property or proprietary right or other right of any third party or that is otherwise unlawful;
(vii) make any representations, warranties or promises on behalf of Microsoft or its suppliers; or (viii) use Licensed Content for any purpose other than that explicitly permitted under this Agreement.

c) **Use of Microsoft Credentials; Publicity.** You may not issue any press releases or other public announcements or make any other disclosures relating to this Agreement, the Program, Microsoft Credentials or Program Content (including your participation in or access or use of any of the foregoing) without the prior written approval of Microsoft, except that you may disclose your Transcript, certificate, Microsoft Credentials, and transcript for a single Microsoft Credential ("**Verified Credential**") that you Hold (as reflected on your Transcript at the time of such disclosure), subject to the terms of this Agreement (including this Section 5(c)). Without limiting the foregoing, you may not advertise, promote, imply, or suggest in any manner that you are employed by, affiliated with, endorsed, or sponsored by Microsoft except to state that you have successfully completed all requirements for the particular Microsoft Credential(s) that you Hold at the time of such statement. During the term of this Agreement, you will insert the following language in each contract under which you provide services involving Microsoft technologies:

"*Microsoft is not a party to this agreement and Microsoft will have no liability whatsoever with respect to the services that are the subject of this contract. Any Microsoft Credential indicates that I have successfully completed the requirements for the corresponding Microsoft Credential. The services I provide are not endorsed or sponsored by Microsoft.*"

Some states, countries and regions regulate the use of the term "engineer"; you will comply as applicable with any such laws in the event you Hold any Microsoft Credentials that use the term "engineer" in title or description.

You may not use, disclose, or reproduce any Microsoft Credential in any manner whatsoever other than as expressly set forth in this Agreement. You will ensure that your use of Microsoft Credentials does not, and you will not take any action that may derogate from, interfere with, or diminish Microsoft's rights in any Microsoft Credentials or damage Microsoft's reputation or goodwill in any Microsoft Credentials. You will not use the Microsoft Credentials in a way that may cause confusion about whether any products or services you offer are Microsoft products or services. You will not misrepresent your Microsoft Credential status. If Microsoft suspects that you have misrepresented or fraudulently presented your Microsoft Credential status or your Transcript, Microsoft will notify you of such misrepresentation or fraud and you will immediately cease disclosure of your Microsoft Credential status or your Transcript, as applicable.

d) **MC ID.** Microsoft may assign a unique Microsoft Certification ID number ("**MC ID**") that will be used to identify you as a Program participant. This unique MC ID belongs to Microsoft, and you may only use the MC ID assigned to you during the Term. Your MC ID is for your use only and should be kept confidential; you, and not Microsoft, are responsible for any use or misuse of your MC ID, and you must promptly notify Microsoft of any confidentiality breach or unauthorized use of your MC ID.

e) **Ownership.** All rights not expressly granted herein are reserved by Microsoft. As between you and Microsoft, Microsoft owns all rights, title, and interests, including all intellectual property rights, in and to the Program Content and Microsoft Credentials, and any associated goodwill. The Program Content and Microsoft Credentials are the valuable property of Microsoft and its licensors and are protected by copyright and other intellectual property laws and treaties. All trade names, trademarks, service marks and logos on or in Program Content or Microsoft Credentials that are not owned by Microsoft are the property of their respective owners. Nothing contained on or in the Program Content or Microsoft Credentials or herein should be construed as granting any right to use any trade names, trademarks, service marks or logos without the express prior written consent of the owner. Microsoft is the sole beneficiary of the goodwill associated with your use of the Microsoft Credentials.

f) **Feedback.** You may provide suggestions, comments or other feedback to Microsoft about the Program, Program Content, Microsoft Credentials, or any element of the foregoing (including in response to surveys, focus groups, or other research inquiries from Microsoft) ("**Feedback**"). You hereby grant to Microsoft a non-exclusive, irrevocable, perpetual, worldwide, royalty-free, fully paid-up, fully sublicensable right and license to develop, market, promote, make, have made,

use, sell, offer for sale, and import any Feedback that you provide into any of Microsoft's products and services and any natural evolutions thereof.

6. Evaluation Conduct; Evaluation Policies. You will not participate in any behavior that could compromise the confidentiality or results of any Evaluation. You acknowledge and agree that Evaluation proctors (if any) are authorized by Microsoft to, and may, take immediate and appropriate measures against you (including restricting your ability to take future Evaluations) if you violate any Evaluation Policies or rules. Without prejudice to any other remedies, Microsoft may, in its sole discretion, prohibit you from taking any Evaluation and/or invalidate your Evaluation results if Microsoft believes you violated this Agreement (including the Credential-Specific Requirements) or engaged in any misconduct (whether or not such misconduct is identified in the applicable Evaluation Policies); in the event of any such prohibition or invalidation, Microsoft will not be obligated to refund any Evaluation-related fees. You are solely responsible for complying with all applicable Evaluation Policies (including any retake policies). If you believe your Evaluation score is inaccurate, you have up to the time set forth in the applicable Evaluation Policies to challenge that score.

7. Representations and Warranties. a) **Mutual Representations and Warranties.** Each party represents and warrants that:
   (i) it has full power to enter into this Agreement and perform its obligations hereunder; and
   (ii) upon your entering into this Agreement, this Agreement will constitute the legal, valid, and binding obligation of such party, enforceable against such party in accordance with its terms.

   b) **Your Representations and Warranties.** You additionally represent and warrant that:
   (i) you will not engage or participate in any activity or course of action that could diminish or tarnish the image or reputation of Microsoft or the image, reputation or validity of the Program or any Evaluations or Microsoft Credentials;
   (ii) you will avoid deceptive, misleading and unethical practices in connection with the Program (including in connection with Microsoft Credentials);
   (iii) your participation in the Program will not infringe, misappropriate or otherwise violate the intellectual property or other rights of any third party or violate any applicable regulation or law;
   (iv) you will promptly notify Microsoft if you experience a breach or other system failure that reasonably indicates any Program Content or your MC ID have been accessed by an unauthorized third party or otherwise modified or corrupted;
   (v) you will not participate in any behavior that could compromise the confidentiality or results of any Evaluation;

(vi) you have and will comply with all applicable Credential-Specific Requirements, laws, rules and regulations in participating in the Program;
(vii) you will not make any representations, warranties or guarantees to any party on behalf of Microsoft; and
(viii) you will not misrepresent your Microsoft Credential status, association with Microsoft partners or any other relationship with Microsoft.

c) **Disclaimer of Representations and Warranties.** TO THE MAXIMUM EXTENT PERMITTED BY LAW, THE PROGRAM, MICROSOFT CREDENTIALS, PROGRAM CONTENT, MS IDS AND MICROSOFT'S ACTIVITIES UNDER THIS AGREEMENT ARE PROVIDED ON AN "AS IS," "WHERE IS" BASIS AND WITH ALL FAULTS. EXCEPT AS EXPRESSLY PROVIDED IN SECTION 7(A), MICROSOFT EXPRESSLY DISCLAIMS ALL WARRANTIES, WHETHER EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, WITH RESPECT TO THE PROGRAM, MICROSOFT CREDENTIALS, PROGRAM CONTENT, MS IDS AND SUPPLIERS, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE AND NON-INFRINGEMENT AND WARRANTIES THAT MAY ARISE OUT OF COURSE OF DEALING, COURSE OF PERFORMANCE, USAGE OR TRADE PRACTICE. MICROSOFT DOES NOT GUARANTEE YOUR SATISFACTION WITH THE PROGRAM OR YOUR RESULTS. WITHOUT LIMITATION TO THE FOREGOING, MICROSOFT DOES NOT GUARANTEE THAT YOU WILL PASS ANY EVALUATION EVEN IF YOU HAVE COMPLETED THE MICROSOFT-RECOMMENDED TRAININGS OR EXPERIENCES (IF ANY) PRIOR TO TAKING SUCH EVALUATION. ALL DISCLAIMERS OF ANY KIND (INCLUDING IN THIS SECTION AND ELSEWHERE IN THIS AGREEMENT) ARE MADE FOR THE BENEFIT OF BOTH MICROSOFT AND THE MICROSOFT PARTIES (DEFINED BELOW) AND ITS AND THEIR SUCCESSORS AND ASSIGNS.

8. Indemnification. a) **Indemnity.** You agree to defend, indemnify and hold harmless Microsoft and its officers, directors, employees, agents, affiliates, successors, assigns and customers (collectively, the "**Microsoft Parties**") from and against any and all losses, damages, liabilities and costs (including reasonable attorneys' fees) resulting from any third-party claims, suits, demands or proceedings (collectively, "**Claims**") arising out of, in connection with or related to:
(i) any actual or alleged breach by you of your representations, warranties, covenants or other obligations hereunder; (ii) your participation in the Program;
(iii) your use of (including any attempt to Hold) any Microsoft Credential in a manner which does not comply with the terms of this Agreement; or
(iv) the performance, promotion, sale or distribution of your services.

b) **Indemnification Procedures.** In the event a Microsoft Party seeks indemnification from you under Section 8(a), Microsoft will promptly notify you in writing of the Claim(s) brought against Microsoft for which it seeks indemnification

and, at Microsoft's discretion, permit you, through counsel acceptable to Microsoft to answer and defend such Claim. You may not settle any Claim on Microsoft's behalf without first obtaining Microsoft's written permission, which will not be unreasonably withheld, and you will not publicize the settlement without Microsoft's prior written permission. Microsoft reserves the right, at its option, to assume full control of the defense of such Claim with legal counsel of its choice. If it so undertakes, any settlement of such Claim requiring payment from you will be subject to your prior written approval. You will reimburse Microsoft upon demand for any expenses reasonably incurred by Microsoft in defending such a Claim, including, without limitation, attorneys' fees and costs, as well as any judgment on or settlement of the Claim in respect to which the foregoing relates.

9. Limitation of Liability. TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, MICROSOFT LIMITS ITS LIABILITY FOR ANY CLAIMS UNDER THIS AGREEMENT TO FIVE THOUSAND DOLLARS ($5,000) AND IN NO EVENT WILL MICROSOFT OR THE MICROSOFT PARTIES BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR EXEMPLARY DAMAGES ARISING OUT OF THIS AGREEMENT. THESE EXCLUSIONS WILL APPLY REGARDLESS OF THE LEGAL THEORY UPON WHICH ANY CLAIM FOR SUCH DAMAGES IS BASED, REGARDLESS OF WHETHER APPLICATION OF THESE EXCLUSIONS CAUSES ANY REMEDY TO FAIL OF ITS ESSENTIAL PURPOSE, AND EVEN IF THE PARTIES HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. WITHOUT LIMITING THE FOREGOING, YOUR SOLE AND EXCLUSIVE REMEDY FOR DISSATISFACTION WITH THE PROGRAM IS TO STOP PARTICIPATING IN THE PROGRAM. THIS SECTION 9 WILL NOT APPLY TO MICROSOFT'S LIABILITY ARISING OUT OF:
(i) VIOLATION OF ITS CONFIDENTIALITY OBLIGATIONS (EXCEPT OBLIGATIONS RELATED TO LEARNER PERSONAL DATA (DEFINED BELOW)); OR
(ii) WILLFUL MISCONDUCT.

10. Confidentiality.

a) Each party will take reasonable steps to protect the other's Confidential Information (as defined below) and will use the other party's Confidential Information only for purposes of this Agreement. Neither party will disclose the other party's Confidential Information to third parties, except that:
(i) Microsoft may disclose your Confidential Information to Suppliers and Microsoft's employees, affiliates, contractors, advisors, and consultants (collectively, "**Representatives**") on a need-to-know basis; and
(ii) a party may disclose the other party's Confidential Information if required by law, but only after it notifies such other party (if legally permissible) to enable such other party to seek a protective order.

b) Microsoft is not required to restrict work assignments of its Representatives who have had access to Confidential Information. The parties acknowledge and agree that neither party can control information the other party may disclose in the course of the Program, or what Microsoft's respective Representatives may remember, even without notes or other aids. You agree that the use of information retained in Representatives' unaided memories in the provision of the Program or any components thereof does not create liability under this Agreement or trade secret law, and agree to limit what you disclose to Microsoft accordingly.

c) Except as expressly permitted herein, neither party will use or disclose the other's Confidential Information for five (5) years after receipt of such information. The five (5) year time period does not apply if applicable law requires a longer period.

d) As used herein, "**Confidential Information**" means non-public information that is designated "confidential" or that a reasonable person should understand is confidential, including the terms of this Agreement. For clarity, Confidential Information includes Program Content (including Evaluation tasks, questions, answers, computations, diagrams, drawings, worksheets, lab environments and other content and Evaluation Related information (collectively, "**Evaluation Related Information**")) and Program communications. Confidential Information does not include information that:
(i) becomes publicly available without a breach of this Agreement;
(ii) the receiving party received lawfully from another source without a confidentiality obligation; or
(iii) is independently developed.

11. Personal Data. You acknowledge that Microsoft may use, collect or disclose your personal data in connection with the Program as described in Microsoft's Privacy Statement (available at https://privacy.microsoft.com/en-US/privacystatement or any successor thereto) or as otherwise disclosed to you. For any questions regarding Microsoft's use of your personal data and to access any data subject rights that may be available, you can contact Microsoft by using the Microsoft webform (available at https://www.microsoft.com/en-us/concern/privacy or any successor thereto).

12. Term and Termination.

a) **Term.** This Agreement begins on the date on which you click the checkbox or otherwise register for or take an Evaluation and will continue in effect until the earliest of:
(i) termination pursuant to Section 12(b);

(ii) the date on which you cease to have a Microsoft Learn profile;
(iii) the date on which you cease to Hold any Microsoft Credentials and are no longer eligible to earn Microsoft Credentials; and
(iv) the date on which Microsoft ceases to make the Program available (the "**Term**").

b) **Termination.** Microsoft may terminate this Agreement at any time:
(i) if you are in material breach of any provision of this Agreement (including the Credential-Specific Requirements) other than Sections 5, 6, 8 or 10, and you fail to cure that breach within thirty (30) days after receipt of written notice from Microsoft thereof; or
(ii) immediately upon written notice if: (A) you breach Sections 5, 6, 8 or 10 of this Agreement (B) a government agency or court finds that any services you provided in relation to the Microsoft technologies to which any of your (then-currently or previously Held) Microsoft Credentials relates are defective in any way; or (C) in Microsoft's sole reasonable discretion, immediate termination is required (e.g., to prevent your further fraud or abuse of the Program, to prevent your further misconduct that could diminish or compromise the security or integrity of the Program or to comply with government mandates or orders). In addition, either party may terminate this Agreement with or without cause upon thirty (30) days prior written notice to the other party.

c) **Effect of Termination.** Upon expiration or termination of this Agreement for any reason:
(i) your right to participate in the Program, take Evaluations, access or utilize Program Content and Hold Microsoft Credentials will automatically cease, and you will automatically be "decertified" and lose any Microsoft Credentials that you Hold at the time of such expiration or termination
(ii) Microsoft may, without liability to you or any third party, immediately deactivate, delete or otherwise remove your access to Program Content and your MC ID, without any obligation to provide any further access thereto; and
(iii) you will promptly return or destroy all full or partial copies of the Program Content in your possession or under your control. For clarity, upon expiration or termination of this Agreement for any reason, you will not identify yourself as participating in the Program or Holding (and will not otherwise use) any Microsoft Credentials. If this Agreement is terminated by Microsoft for cause, Microsoft may, in its sole discretion, prohibit you from re-entering into this Agreement and participating in the Program in the future.

d) **Survival.** The provisions of this Agreement that, by their terms, require performance after the Term or have application to events that may occur after the Term, will survive the expiration or termination of this Agreement. Without limiting

the foregoing, all of your confidentiality and indemnity provisions and all restrictions on the use of Microsoft Credentials and Program Content will survive the expiration or termination of this Agreement.

13. Miscellaneous.

a) **Export Compliance.** The parties acknowledge that Program Content may be subject to U.S. and other countries' export jurisdiction. You must comply with all applicable international and national laws, including the U.S. Export Administration Regulations, as well as end-user, end use and destination restrictions by U.S. and other governments. For additional information, see https://www.microsoft.com/en-us/exporting.

b) **Entire Agreement.** This Agreement constitutes the entire agreement between the parties concerning the subject matter hereof and supersedes all prior or contemporaneous representations, discussions, proposals, negotiations, conditions, and agreements, whether oral or written, and all communications between the parties relating to the subject matter hereof and all past courses of dealing or industry custom. In the event of any conflict between the terms of this Agreement and the Credential-Specific Requirements, the terms of the Credential-Specific Requirements will control solely to the extent of the inconsistency and solely with respect to the applicable Microsoft Credential.

c) **Assignment.** You may not assign, transfer, or sublicense any of your rights or delegate any of your obligations hereunder, in each case whether voluntarily, involuntarily, by operation of law or otherwise.

d) **Attorneys' Fees.** If either party employs attorneys to enforce any rights arising out of or relating to this Agreement, the prevailing party will be entitled to recover its reasonable attorney's fees, costs, and other expenses, including the costs and fees incurred on appeal or in a bankruptcy or similar action.

e) **No Exclusivity.** Your participation in this Program is voluntary. Nothing in this Agreement restricts you from supporting, promoting, distributing, or using non-Microsoft technology.

f) **Relationship of the Parties; Non-Microsoft Technology.** You will not, by virtue of this Agreement, have any right, power, or authority to act or create any obligation, express or implied, or to make any representation or warranty, on behalf of the Microsoft or to bind Microsoft in any respect whatsoever. For clarity, nothing in this Agreement restricts you from supporting, promoting, distributing, or using non-Microsoft technology.

g) **Notices.** All notices, requests, consents, claims, demands, waivers and other communications hereunder (each, a "**Notice**") must be in writing and:
(i) in the case of Notices to Microsoft, addressed to Microsoft at the address set forth in the first paragraph of this Agreement; and
(ii) in the case of Notices to you, posted to Microsoft Learn or sent to your email address (or to such other address that may be designated by the party receiving Notice from time to time in accordance with this Section 13(g)). All Notices must be delivered by personal delivery, nationally recognized overnight courier (with all fees pre-paid), facsimile, email (with confirmation of transmission) or certified or registered mail (in each case, return receipt requested, postage pre-paid). Except as otherwise provided in this Agreement, a Notice is effective only (y) upon receipt by the receiving party and (z) if the party giving the Notice has complied with the requirements of this Section 13(g).

h) **Waiver; Severability.** No waiver by any party of any of the provisions hereof will be effective unless explicitly set forth in writing and signed by the party so waiving. Except as otherwise set forth in this Agreement, no failure to exercise or delay in exercising any right, remedy, power, or privilege arising from this Agreement will operate or be construed as a waiver thereof. If any provision of this Agreement is invalid, illegal, or unenforceable in any jurisdiction, such invalidity, illegality or unenforceability will not affect any other term or provision of this Agreement or invalidate or render unenforceable such term or provision in any other jurisdiction. Upon such determination that any term or other provision is invalid, illegal, or unenforceable, that provision will be deemed severable from this Agreement and will not affect the validity and enforceability of any remaining provision.

i) **Microsoft Contracting Entity:** The Microsoft contracting entity for this Agreement is determined by the country or region where you are located. See details below:

i. The Microsoft entity for the following countries or regions is indicated below: Anguilla, Antigua and Barbuda, Argentina, Aruba, Bahamas, Barbados, Belize, Bermuda, Bolivia, Brazil, Canada, Cayman Islands, Chile, Colombia, Costa Rica, Curacao, Dominica, Dominican Republic, Ecuador, El Salvador, French Guiana, Grenada, Guam, Guatemala, Guyana, Haiti, Honduras, Jamaica, Martinique, Mexico, Montserrat, Nicaragua, Panama, Paraguay, Peru, Puerto Rico, Saint Kitts and Nevis, Saint Lucia, Saint Pierre and Miquelon, Saint Vincent and The Grenadines, Suriname, Trinidad and Tobago, Turks and Caicos Islands, United States, Uruguay, Venezuela, Virgin Islands (British) and Virgin Islands (U.S.):

Microsoft Corporation
One Microsoft Way

Redmond, WA 98052 USA

ii. The Microsoft entity for the following countries or regions is indicated below: Afghanistan, Albania, Algeria, Andorra, Angola, Armenia, Austria, Azerbaijan, Bahrain, Belarus, Belgium, Benin, Bosnia and Herzegovina, Botswana, Bouvet Island, Bulgaria, Burkina Faso, Burundi, Cameroon, Central African Republic, Chad, Comoros, Congo, Cote d'Ivoire, Croatia, Cyprus, Czech Republic, Democratic Republic of São Tomé and Príncipe, Democratic Republic of the Congo, Denmark, Djibouti, Egypt, Estonia, Ethiopia, Faeroe Islands, Finland, France, Gabon, Gambia, Georgia, Germany, Ghana, Gibraltar, Greece, Greenland, Guadeloupe, Guinea-Bissau, Hungary, Iceland, Ireland, Israel, Italy, Jordan, Kazakhstan, Kenya, Kosovo, Kuwait, Kyrgyzstan, Latvia, Lebanon, Lesotho, Liberia, Liechtenstein, Lithuania, Luxembourg, Libya, North Macedonia, Madagascar, Malawi, Mali, Malta, Mauritania, Mauritius, Moldova, Monaco, Mongolia, Montenegro, Morocco, Mozambique, Namibia, the Netherlands, New Caledonia, Niger, Nigeria, Norway, Oman, Pakistan, Poland, Portugal, Qatar, Republic of Cabo Verde, Republic of Equatorial Guinea, Republic of Guinea, Republic of Senegal, Reunion, Romania, Russian Federation, Rwandese Republic, Saint Helena, San Marino, Saudi Arabia, Serbia, Seychelles, Sierra Leone, Slovakia, Slovenia, Somalia, South Africa, Spain, Svalbard and Jan Mayen, Swaziland, Sweden, Switzerland, Tajikistan, Tanzania, Togo, Tunisia, Türkiye, Turkmenistan, Uganda, Ukraine, United Arab Emirates, United Kingdom, Uzbekistan, Vatican City State, Yemen, Zaire, Zambia and Zimbabwe:

Microsoft Ireland Operations Limited
The Atrium, Block B, Carmenhall Road
Sandyford Industrial Estate
Dublin, 18, Ireland

8F, No 7, Sungren Rd.
Shinyi Chiu, Taipei
Taiwan 110

vi. The Microsoft entity for the People's Republic of China is:

Microsoft (China) Company Limited6F Sigma Center
No. 49 Zhichun Road Haidian District
Beijing 100080, P.R.C

vii. The Microsoft entity for the Republic of Korea is:

Microsoft Korea, Inc.
5th Floor, West Wing
POSCO Center
892 Daechi-Dong Gangnam-Gu
Seoul, 135-777, Korea

j) **Applicable law.** Applicable law, jurisdiction and venue for this Agreement are identified below. This choice of jurisdiction and venue does not prevent either party from seeking injunctive relief for a violation of intellectual property rights, confidentiality obligations or enforcement of recognition of any award or order. Injunctive relief or enforcement of recognition may be sought in any appropriate jurisdiction.

i. Generally: Except as provided in Section 13(j)(ii), the laws of the State of Washington govern this Agreement. If federal jurisdiction exists, the parties' consent to exclusive jurisdiction and venue in the federal courts in King County, Washington. If not, the parties' consent to exclusive jurisdiction and venue in the Superior Court of King County, Washington.

ii. Other terms: If your principal place of business is in one of the countries or regions listed below, the corresponding provision applies and supersedes Section

13(j)(i) to the extent that it is inconsistent:

A. If your principal place of business is in Australia and its external territories, Bangladesh, Bhutan, Brunei Darussalam, Cambodia, Cook Islands, Fiji, French Polynesia, French Southern Territories, Hong Kong SAR, India, Indonesia, Kiribati, Lao People's Democratic Republic, Macao SAR, Malaysia, Maldives, Marshall Islands, Mayotte, Micronesia, Nauru, Nepal, New Zealand, Niue, Northern Mariana Islands, Palau, Papua New Guinea, Philippines; Pitcairn, Samoa, Singapore, Solomon Islands, Sri Lanka, Thailand, Timor Leste, Tokelau, Tonga, Tuvalu, Wallis and Futuna Islands, Vanuatu and Vietnam, this Agreement is construed and controlled by the laws of Singapore.

B. If your principal place of business is in Australia or its external territories, Brunei, Malaysia, New Zealand, or Singapore, you consent to the non-exclusive jurisdiction of the Singapore courts.

C. If your principal place of business is in Bangladesh, Bhutan, Cambodia, Cook Islands, Fiji, French Polynesia, French Southern Territories, Hong Kong SAR, India, Indonesia, Kiribati, Lao People's Democratic Republic, Macao SAR, Maldives, Marshall Islands, Mayotte, Micronesia, Nauru, Nepal, Niue, Northern Mariana Islands, Palau, Papua New Guinea, Philippines; Pitcairn, Samoa, Solomon Islands, Sri Lanka, Thailand, Timor Leste, Tokelau, Tonga, Tuvalu, Wallis and Futuna Islands, Vanuatu and Vietnam, any dispute related to this Agreement, including any question regarding its existence, validity or termination, will be referred to and finally resolved by arbitration in Singapore according to the Arbitration Rules of the Singapore International Arbitration Centre ("**SIAC**"). The SIAC Arbitration Rules are incorporated by this reference into the Agreement. The Tribunal will consist of one arbitrator appointed by the Chairman of SIAC. The language of the arbitration will be English. The arbitrator's decision will be final, binding and incontestable and may be used as a basis for judgment thereon in Bangladesh, India, Indonesia, Philippines, Sri Lanka, Thailand or Vietnam (as appropriate), or elsewhere.

D. If your principal place of business is in Japan, the following applies: The Agreement will be construed and controlled by the laws of Japan. You consent to exclusive original jurisdiction and venue in the Tokyo District Court. The prevailing party in any action related to this Agreement may recover its reasonable attorneys' fees, costs, and other expenses.

E. If your principal place of business is in Afghanistan, Albania, Algeria, Andorra, Angola, Armenia, Austria, Azerbaijan, Bahrain, Belarus, Belgium, Benin, Bosnia and Herzegovina, Botswana, Bouvet Island, Bulgaria, Burkina Faso, Burundi, Cameroon, Central African Republic, Chad, Comoros, Congo, Cote d'Ivoire, Croatia, Cyprus,

Czech Republic, Democratic Republic of São Tomé and Príncipe, Denmark, Djibouti, Egypt, Estonia, Ethiopia, Faeroe Islands, Finland, France, Gabon, Gambia, Georgia, Germany, Ghana, Gibraltar, Greece, Greenland, Guadeloupe, Guinea-Bissau, Hungary, Iceland, Ireland, Israel, Italy, Jordan, Kazakhstan, Kenya, Kosovo, Kuwait, Kyrgyzstan, Latvia, Lebanon, Lesotho, Liberia, Liechtenstein, Lithuania, Luxembourg, Libya, North Macedonia, Madagascar, Malawi, Mali, Malta, Mauritania, Mauritius, Moldova, Monaco, Mongolia, Montenegro, Morocco, Mozambique, Namibia, the Netherlands, New Caledonia, Niger, Nigeria, Norway, Oman, Pakistan, Poland, Portugal, Qatar, Republic of Cabo Verde, Republic of Equatorial Guinea, Republic of Guinea, Republic of Senegal, Reunion, Romania, Russian Federation, Rwandese Republic, Saint Helena, San Marino, Saudi Arabia, Serbia, Seychelles, Sierra Leone, Slovakia, Slovenia, Somalia, South Africa, Spain, Svalbard and Jan Mayen, Swaziland, Sweden, Switzerland, Tajikistan, Tanzania, Togo, Tunisia, Türkiye, Turkmenistan, Uganda, Ukraine, United Arab Emirates, United Kingdom, Uzbekistan, Vatican City State, Yemen, Zaire, Zambia, Zimbabwe, the following applies:

The Agreement is governed by and construed according to the laws of Ireland. You consent to the jurisdiction of and venue in the Irish courts in all disputes relating to this Agreement.

F. If your principal place of business is in the People's Republic of China, the following applies. For purpose of this Agreement, the People's Republic of China does not include Hong Kong SAR, Macao SAR, or Taiwan:

The Agreement will be construed and controlled by the laws of the People's Republic of China. You consent to submit any dispute relating to the Agreement and any addendum to binding arbitration. The arbitration will be at the China International Economic and Trade Arbitration Commission in Beijing ("**CIETAC**") according to its then current rules.

G. If your principal place of business is in Colombia or Uruguay, the following applies:

All disputes, claims, or proceedings between the parties relating to the validity, construction or performance of this Agreement will be settled by arbitration. The arbitration will be according to the UNCITRAL Arbitration Rules as presently in force. The appointing authority will be the International Chamber of Commerce ("**ICC**") acting according to the rules adopted by the ICC for this purpose. The place of arbitration will be Seattle, Washington, U.S.A. There will only be one arbitrator. The award will be in law and not in equity and will be final and binding on the parties. The parties hereto irrevocably agree to submit all matters and disputes

arising in connection with this Agreement to arbitration in Seattle, Washington, U.S.A.

H. If your principal place of business is in Republic of Korea, the following applies: The Agreement will be construed and controlled by the laws of Republic of Korea. You consent to the exclusive original jurisdiction and venue in the Seoul Central District Court. The prevailing party in any action to enforce a right or remedy under this Agreement or to interpret a provision of this Agreement will be entitled to recover its reasonable attorneys' fees, costs, and other expenses.

I. If your principal place of business is in Taiwan, the following applies:

The terms of this Agreement will be governed by and construed according to the laws of Taiwan. The parties hereby designate the Taipei District Court as the court of first instance having jurisdiction over any disputes arising out of or in connection with this Agreement.

k) **No Third-Party Beneficiaries.** This Agreement does not create or confer any legal or equitable right, benefit or remedy upon any person or entity other than the parties. No person or entity will be deemed a third-party beneficiary under or by reason of this Agreement.

l) **Headings; Construction.** The section and paragraph headings used in this Agreement are inserted for convenience only and will not affect the meaning or interpretation of this Agreement. Unless qualified by words such as "only" or "solely," the terms "including," "e.g." or similar words in this Agreement are deemed to be followed by the words "without limitation."

Microsoft Certification Exam – Candidate Agreement

Article • 02/28/2024

BY TAKING A MICROSOFT CERTIFICATION EXAM (**EXAMS**), YOU ACKNOWLEDGE THAT YOU HAVE AGREED TO BE BOUND BY THESE RULES AND REQUIREMENTS. IF YOU ARE TAKING THIS EXAM AS PART OF AN ACADEMIC INSTITUTION, THEN BY TAKING THIS EXAM, YOU ADDITIONALLY ACKNOWLEDGE THAT YOU ARE EITHER A STUDENT OR FACULTY MEMBER OF AN ACCREDITED ACADEMIC INSTITUTION.

1. **Confidentiality**

   You will not and will not allow any other person or entity to distribute, copy, display, publish, summarize, photograph, record, download, transmit or post any exam or any exam tasks, questions, answers, computations, diagrams, drawings, worksheets or other content or exam-related information. Except as expressly set forth in the Microsoft Credentials Program Agreement, you may not:

   - Use, disclose or reproduce any Microsoft Credential in any manner whatsoever; or
   - Disclose Microsoft's confidential information (including without limitation exam tasks, questions, answers, computations, diagrams, drawings, worksheets and other content and exam-related information) to any third parties.

2. **Misconduct**

   You will not participate in any behavior that could compromise the confidentiality or results of any exam. You are solely responsible for complying with all applicable exam policies, procedures, and rules. Exam proctors (if any) are authorized by Microsoft to, and may, take immediate and appropriate measures against you if you violate any exam policies, procedures, or rules. Without prejudice to any other remedies, Microsoft may, in its sole discretion, prohibit you from taking any exam and/or invalidate your exam results (in each case, without obligation to refund any exam-related fees) if Microsoft believes you violated the Microsoft Credentials Program Agreement (including the Credential-Specific Requirements) or engaged in any misconduct, including without limitation the following:

   - Providing access to, disclosing, distributing, copying, photographing, recording, downloading, posting, displaying, publishing or transmitting, in any form or by any means, any exam or any tasks, questions, answers,

computations, diagrams, drawings, worksheets or other content or exam-related information;
- Misrepresenting your identity or impersonating another individual;
- Misrepresenting your country of residence or the country where an online proctored exam will be delivered;
- Modifying or altering any exam, exam score or exam record;
- Submitting any work or answers that are not entirely your own;
- Using Artificial Intelligence or related products or services in any way to assist you;
- Providing or receiving improper assistance during an exam;
- Seeking or obtaining unauthorized access to any exam or any of the following elements of an exam: tasks, questions, answers, computations, diagrams, drawings, worksheets or other content or exam-related information (this includes using braindump material or unauthorized publication of exam questions with or without answers);
- Possessing non-authorized items while taking an exam, including without limitation mobile phones, electronic devices, laptops, watches, notes, documentation, or content;
- Misconduct as determined by statistical analysis;
- Attempting to reverse engineer, decompile, or disassemble any exam;
- Engaging in any other misconduct that could compromise the confidentiality, integrity, or security of the exam; and
- Violating any Microsoft or exam delivery provider's policy, requirement, or rule.

3. **Important Privacy Notice and Consent**

   By taking this exam, you agree that Microsoft, its affiliates, and the exam provider may:

   - disclose your personal information and exam data with each other to administer the exam, to improve the testing program and testing experience, to facilitate statistical analyses, and to determine if you passed the exam;
   - contact you regarding certificates showing that you passed the exam or information regarding the Microsoft Credential program;
   - disclose your personal information and exam results with other Microsoft programs, e.g., the Microsoft Partner Network program, to verify your or your employer's compliance with the program requirements;
   - disclose your information with standards and certification boards affiliated with the academic institution, company or government organization that provided you with an exam voucher;

- disclose your exam results and your personal information with the entity that issued the voucher or that purchased the site license if the exam was made available to you by one of the following methods:
  - A company or government organization purchased vouchers and then issued the vouchers to its employees or contractors,
  - An academic institution purchased vouchers and then issued the vouchers to its students or employees,
  - An academic institution or government organization operated an exam test center and did not charge you a standalone fee to take the exam, or
  - A government agency that provides training stipends to be applied based on completion conditions and subject to Microsoft's identified verification process.
- disclose your exam results and your personal information with an entity that funded your exam if the funding was made available through a government agency that provides training stipends to be applied based on completion conditions and subject to Microsoft's identified verification process.

To learn more about the data collection and use practices of Microsoft, please visit https://privacy.microsoft.com. To learn more about the data collection and use practices of the exam provider, please contact the exam provider.

4. **Academic Exams**

   If you registered to take an academic exam, you must provide the exam provider with documentation that verifies you are currently enrolled as a student at or a faculty member of an accredited academic institution before you can take the exam. Prior to starting an academic exam, you will be required to acknowledge that you are either a student or faculty member of an accredited academic institution.

5. **Score Challenge Policy**

   If you believe your exam score is inaccurate, you have fifteen (15) days after taking the applicable exam to challenge that score. To challenge an exam score within this time period, you can contact Microsoft at https://learn.microsoft.com/en-us/credentials/support/help.

6. **Tenants**

   If you are being provided with a defined cloud environment (**"Tenant"**) as a part of an exam lab delivery, the Tenant is made available solely for the purpose of assessing skills that are part of the exam. You will not share or use Tenants for purposes outside of the exam. The Tenant used in the exam is a trial tenant and

cannot be used or accessed after the exam is over and is not eligible for extension. Tenants must not be converted to a paid subscription. Tenants obtained as a part of this exam remain the property of Microsoft, and Microsoft reserves the right to obtain access and repossess at any time.

7. **Additional Exam Policies**

   The following policies are also applicable to your participation in the Exam:

   - For the exam security policy, see https://learn.microsoft.com/en-us/credentials/support/exam-and-assessment-lab-security-policies.
   - For the Credential expiration policy, see https://learn.microsoft.com/en-us/credentials/support/certification-expiration-policy
   - For additional exam policies, see https://learn.microsoft.com/en-us/credentials/certifications/certification-exam-policies and the exam provider's website.

Microsoft Applied Skills Assessment – Candidate Agreement

Article • 02/28/2024

BY TAKING THE APPLIED SKILLS ASSESSMENT (**ASSESSMENTS**), YOU ACKNOWLEDGE THAT YOU HAVE AGREED TO BE BOUND BY THESE RULES AND REQUIREMENTS. BY TAKING AN ASSESSMENT, YOU ADDITIONALLY ACKNOWLEDGE THAT: THE ACTIONS YOU TAKE WHILE COMPLETING THE ASSESSMENT WILL BE RECORDED, NEITHER YOUR FACE NOR YOUR VOICE WILL BE RECORDED, AND NO ACTIONS TAKEN OUTSIDE THE ASSESSMENT LAB ENVIRONMENT WILL BE RECORDED.

1. **Confidentiality**

   You will not and will not allow any other person or entity to distribute, copy, display, publish, summarize, photograph, record, download, transmit or post any assessment or any assessment tasks, questions, answers, computations, diagrams, drawings, worksheets, lab environments or other content or assessment-related information. Except as expressly set forth in the Microsoft Credentials Program Agreement, you may not:

   - Use, disclose or reproduce any Microsoft Credential in any manner whatsoever; or
   - Disclose Microsoft's confidential information (including without limitation assessment tasks, questions, answers, computations, diagrams, drawings, worksheets, lab environments and other content and assessment-related information) to any third parties.

2. **Misconduct**

   You will not participate in any behavior that could compromise the confidentiality or results of any assessment. You are solely responsible for complying with all applicable assessment policies, procedures and rules. Without prejudice to any other remedies, Microsoft may, in its sole discretion, prohibit you from taking any assessment and/or invalidate your assessment results (in each case, without obligation to refund any assessment-related fees) if Microsoft believes you violated the Microsoft Credentials Program Agreement (including the Credential-Specific Requirements) or engaged in any misconduct, including without limitation the following:

   - Providing access to, disclosing, distributing, copying, photographing, recording, downloading, posting, displaying, publishing or transmitting, in

any form or by any means, any assessment or any tasks, questions, answers, computations, diagrams, drawings, worksheets, lab environments or other content or assessment-related information;
- Misrepresenting your identity or impersonating another individual;
- Misrepresenting your country of residence;
- Using Artificial Intelligence or related products or services in any way to assist you in an assessment;
- Using the resources provided in the assessment lab for any purpose other than to accomplish the required tasks;
- Modifying or altering any assessment, assessment score, or assessment record;
- Submitting any work or answers that are not entirely your own;
- Providing or receiving improper assistance of any kind during an assessment;
- Seeking or obtaining unauthorized access to any assessment or any of the following elements of an assessment: tasks, questions, answers, computations, diagrams, drawings, worksheets, lab environments, or other content or assessment-related information (this includes using braindump material or unauthorized publication of assessment questions with or without answers);
- Misconduct as determined by statistical analysis;
- Engaging in any other misconduct that could compromise the confidentiality, integrity, or security of an assessment; or
- Violating any Microsoft policy, requirement, or rule.

3. **Important Privacy Notice and Consent**

   By taking this assessment, you agree that Microsoft, its affiliates, and the assessment provider may disclose your personal information and assessment results with other Microsoft programs, e.g., the Microsoft Partner Network program, to verify your or your employer's compliance with the program requirements.

   To learn more about the data collection and use practices of Microsoft, please visit https://privacy.microsoft.com. To learn more about the data collection and use practices of the assessment provider, please contact the assessment provider.

4. **Score Challenge Policy**

   If you believe your assessment score is inaccurate, you have fifteen (15) days after taking the applicable assessment to challenge that score. To challenge an assessment score within this time period, you can contact Microsoft at https://learn.microsoft.com/en-us/credentials/support/help.

5. **Tenants**

   If you are being provided with a defined cloud environment (“**Tenant**”) as a part of an assessment lab delivery, the Tenant is made available solely for the purpose of assessing skills that are part of the assessment. You will not share or use Tenants for purposes outside of the assessment. The Tenant used in the assessment is a trial tenant and cannot be used or accessed after the assessment is over and is not eligible for extension. Tenants must not be converted to a paid subscription. Tenants obtained as a part of this assessment remain the property of Microsoft, and Microsoft reserves the right to obtain access and repossess at any time.

6. **Additional Assessment Policies**

   The following policies are also applicable to your participation in the Assessment:

   - For the Exam security policy, see https://learn.microsoft.com/en-us/credentials/support/exam-and-assessment-lab-security-policies.
   - For the Credential expiration policy, see https://learn.microsoft.com/en-us/credentials/support/certification-expiration-policy
   - For additional assessment policies, see https://learn.microsoft.com/en-us/credentials/certifications/certification-exam-policies and the assessment provider’s website.

Microsoft Certification Renewal Assessment – Candidate Agreement

Article • 12/27/2023

BY TAKING A CERTIFICATION RENEWAL ASSESSMENT (**ASSESSMENTS**), YOU ACKNOWLEDGE THAT YOU HAVE AGREED TO BE BOUND BY THESE RULES AND REQUIREMENTS.

1. **Confidentiality**

   You will not and will not allow any other person or entity to distribute, copy, display, publish, summarize, photograph, record, download, transmit or post any assessment or any assessment questions, answers, computations, diagrams, drawings, worksheets, lab environments or other content or assessment-related information. Except as expressly set forth in the Microsoft Credentials Program Agreement, you may not:

   - Use, disclose, or reproduce any Microsoft Credential in any manner whatsoever; or
   - Disclose Microsoft's confidential information (including without limitation assessment questions, answers, computations, diagrams, drawings, worksheets, lab environments and other content and assessment-related information) to any third parties.

2. **Misconduct**

   You will not participate in any behavior that could compromise the confidentiality or results of any assessment. You are solely responsible for complying with all applicable assessment policies, procedures and rules. Without prejudice to any other remedies, Microsoft may, in its sole discretion, prohibit you from taking any assessment and/or invalidate your assessment results (in each case, without obligation to refund any assessment-related fees) if Microsoft believes you violated the Microsoft Credentials Program Agreement (including the Credential-Specific Requirements) or engaged in any misconduct, including without limitation the following:

   - Providing access to, disclosing, distributing, copying, photographing, recording, downloading, posting, displaying, publishing or transmitting, in any form or by any means, any assessment or any tasks, questions, answers, computations, diagrams, drawings, worksheets, lab environments or other content or assessment-related information;

- Misrepresenting your identity or impersonating another individual;
- Misrepresenting your country of residence;
- Using Artificial Intelligence or related products or services in any way to assist you in an assessment;
- Using the resources provided in the assessment lab for any purpose other than to accomplish the required tasks;
- Modifying or altering any assessment, assessment score, or assessment record;
- Submitting any work or answers that are not entirely your own;
- Providing or receiving improper assistance of any kind during an assessment;
- Seeking or obtaining unauthorized access to any assessment or any of the following elements of an assessment: questions, answers, computations, diagrams, drawings, worksheets, lab environments, or other content or assessment-related information (this includes using braindump material or unauthorized publication of assessment questions with or without answers);
- Misconduct as determined by statistical analysis;
- Engaging in any other misconduct that could compromise the confidentiality, integrity, or security of an assessment; or
- Violating any Microsoft policy, requirement, or rule.

3. **Important Privacy Notice and Consent**

   By taking this assessment, you agree that Microsoft, its affiliates, and the assessment provider may disclose your personal information and assessment results with other Microsoft programs, e.g., the Microsoft Partner Network program, to verify your or your employer's compliance with the program requirements.

   To learn more about the data collection and use practices of Microsoft, please visit https://privacy.microsoft.com.

4. **Score Challenge Policy**

   If you believe your assessment score is inaccurate, you have fifteen (15) days after taking the applicable assessment to challenge that score. To challenge an assessment score within this time period, you can contact Microsoft at https://learn.microsoft.com/en-us/credentials/support/help.

5. **Additional Assessment Policies**

   The following policies are also applicable to your participation in the Assessment:

- For the Exam security policy, see https://learn.microsoft.com/en-us/credentials/support/exam-and-assessment-lab-security-policies.
- For the Credential expiration policy, see https://learn.microsoft.com/en-us/credentials/support/certification-expiration-policy
- For additional assessment policies, see https://learn.microsoft.com/en-us/credentials/certifications/certification-exam-policies and the assessment provider's website.

Find a Training Services Partner

09/11/2025

About Microsoft training services partner

Whether you're an individual looking to skill up for your next role or a manager needing to boost your team's cloud skills, Microsoft training services partner offer a breadth of training solutions including blended learning, in-person, and online to meet your learning objectives. Training Services Partners around the world have met program requirements to teach training content developed by Microsoft and delivered by Microsoft Certified Trainers. To learn more about the value of working with Training Services Partners, visit: Value of Training Services Partners.

Note: Only Silver and Gold training services partner will be added to the LP Directory

Find a Microsoft Training Services Partner by country/region

Our worldwide partner network delivers flexible, role-based, customized training and certifications in Microsoft technologies. All instructors are Microsoft Certified Trainers (MCTs) who have completed rigorous training and have met stringent technical certification requirements.

Value of Training Services Partners

Article • 10/25/2023

How Training Services Partners help IT professionals and developers

Learn a new skill. With just one course, you can develop practical skills that cover the technology adoption life cycle—from planning to implementation to support. And you gain a level of proficiency that can only be taught through hands-on labs, simulations, and the real-world application of skills.

Prepare for certification. Microsoft Official Courses are built with Microsoft Certification in mind and are taught by qualified industry instructors.

Start a new career. The industry instructors who teach Microsoft Official Courses can help you gain IT skills that directly transfer from the classroom to the workplace. Courses offer access to valuable digital resources that remain available to you long after you complete a course.

How Training Service Partners help IT managers

Improve efficiency and productivity. Training Services Partners can help you get the most out of your organization's technology investment. Your employees can add to their proficiency with Microsoft technologies from classroom training or Microsoft Official Courses On-Demand.

Prepare for deployment. Training available through Microsoft Training Services Partners helps companies accelerate new Microsoft technology deployments and can reduce downtime.

Strengthen employee recruitment and development. Potential new hires want to know that you will invest in training and certification for your team. This is a benefit for the individual to develop new skills in specific technologies, hardware, and software, while helping your organization keep pace.

Become a Microsoft Training Services Partner

Whether you deliver training to your customers as one of your core services or as your entire business practice, attaining the certification competency can open new opportunities for your business. Microsoft Partner Network benefits can help you save time and money while you strengthen your capabilities, better serve customers, and build connections to reach your full business potential. Join the Microsoft Training Services Partner program.

Frequently Asked Questions

Where can I find Microsoft Learn Achievement Code resources?

The Microsoft Learn Achievement Code Onboarding and Usage Overview document can be found in the Get Started Collection on the Learning Resources site.

How do I get access to create achievement code URLs?

To request achievement codes for your learners, you must first enroll in the achievement code request program. Once approved, you'll be able to generate achievement code URLs.

Learn more, including how to enroll in the Get Started collection.

I don't see the "Request Achievement Code" button after enrolling—what should I do?

If the button is still missing 24+ hours after enrollment, try the following steps:

1. Close all browser windows
2. Open a new browser and go to https://learn.microsoft.com
3. Sign in using your Outlook.com Class Administrator account
4. Navigate to a course or learning path detail page
5. Perform a hard refresh (Ctrl + F5)

If the issue persists, re-enroll.

Still having trouble? Submit feedback via the Microsoft Learn Troubleshooting page.

Note: Feedback submissions are reviewed but not responded to individually

How do I create an achievement code URL?

1. Go to https://aka.ms/Courseware_Title_Plan
2. Use the **URL Creation Tool** tab to generate your code

For step-by-step guidance, see the Achievement Code Overview document in the Get Started collection.

What if a learner sees "Code has reached its maximum" or "Achievement code not found"?

These errors mean the code is no longer valid. Please generate a new achievement code for the course and share it with the learner.

If issues continue, submit feedback via the Microsoft Learn Troubleshooting page.

Note: Feedback submissions are reviewed but not responded to individually.

Do incomplete or incorrect achievement code URLs count toward KPIs?

No. Only achievement codes created using the **URL Creation Tool** in the Title Plan are eligible for KPI credit. Codes generated outside this process will not be counted.

Microsoft Certified Trainer

Microsoft Certified Trainers (MCTs) are the premier technical and instructional experts in Microsoft technologies. When you join this esteemed group of worldwide training professionals, you'll enjoy exclusive access to Microsoft benefits and readiness resources designed to enhance your training career and engage with Microsoft teams. Microsoft Training Services Partners are required to deliver official Microsoft courseware using Microsoft Certified Trainers. Membership in the MCT Program qualifies you to deliver this official Microsoft courseware in our customer skilling ecosystem.

The Microsoft Certified Trainer status is an annual membership program for professionals who train Microsoft customers on our company's technologies. You must meet program enrollment or renewal requirements, complete the online application, and agree to the **MCT Program Agreement** each year to remain enrolled in the MCT Program.

MCT Program Value

Software and discounts

Active MCTs receive access to software licenses, service credits, exam discounts, and other benefits designed to help them prepare for Microsoft course deliveries and enhance their technical expertise. MCT benefits must be used in accordance with the legal requirements defined in the MCT Program Agreement and all related Microsoft software licensing and resource policies. Explore all the benefits available to MCTs.

MCT Lounge community platform

MCTs and MCT Alumni have access to MCT Lounge, a gated community within the Microsoft Tech Community. MCT Lounge offers exclusive access to the following resources:

- MCT Program meetings
- Continuous updates on Microsoft courseware
- Professional development libraries with technical and instructional resources
- Opportunities to provide input and engage in discussion with Microsoft teams
- Connections to Microsoft Training Services Partners
- Discussion forums with MCT Program leaders and fellow MCTs.

Resources and tools offered within MCT Lounge are continuously updated, creating a dynamic experience where MCTs expand their knowledge on Microsoft technologies and enhance their instructional skills.

Connection to Microsoft teams and partners

Through the MCT Lounge community space, Microsoft Certified Trainers can learn from our company's teams and connect with Training Services Partners. Virtual and in-person events with Microsoft employees give MCTs the inside track on our products, courseware, and global events. Training Services Partners also have a presence in MCT Lounge, allowing them to post job opportunities and create connections to the MCTs they seek to hire for customer trainings. Being an MCT will offer you connections in Microsoft and our skilling ecosystem.

MCT Program Enrollment

Are you ready to become an MCT or reinstate a previous MCT status? We're excited to have you as part of our world-class community of trainers.

Enrollment Instructions

- New MCT Enrollment - Visit this page for step-by-step instructions on achieving MCT career status.
- MCT Renewal or Reinstatement – Visit this page if you are a current or prior MCT to review the instructions for re-enrolling in the MCT Program.

MCT Lounge Access

Once approved for membership in the MCT Program, all MCTs must join MCT Lounge, our online community. MCT Lounge provides professional development resources and important announcements MCTs need to remain informed of Microsoft updates and engaged with MCT opportunities.

MCT Alumni Program

For over three decades, MCTs have been at the forefront of Microsoft technology training and adoption. In recognition of their significant contributions, we offer the MCT Alumni program. This program is for all MCTs in good standing with Microsoft who no longer train as part of the MCT program but wish to maintain their relationship with the MCT community.

MCTs may choose to discontinue their active MCT Program membership and switch to the MCT Alumni Program. The MCT Alumni program will never require an annual fee, and it allows members to retain two important MCT Program benefits:

- Access to the MCT Lounge to help former MCTs stay connected to MCT Program activities and announcements

- Discounts on exams to ease former MCTs ability to earn current Microsoft certifications and facilitate their re-entry into the MCT program in the future.

If you're interested in becoming a member of the MCT Alumni Program, please review the MCT Alumni Program Agreement to understand the terms of membership.

Apply for MCT Alumni membership or change your active MCT status to the Alumni status by emailing mctprog@microsoft.com. If you require support in this process, visit the MCT Support forum available at https://aka.ms/mctsupport.

Microsoft Certified Trainer Support Options

1. Self-Help Resources

- Current MCTs can review the **MCT Support Resources** page via the **MCT Lounge** for help with common support issues.

2. Submit a Support Request

Create an online support request for help with MCT applications, renewals, benefits, or tool access by visiting the MCT Portal at https://aka.ms/mctportal.

Last updated on 12/01/2025

MCT Program Requirements

If you're interested in becoming an MCT, we'd love to have you! Microsoft Certified Trainers are part of a world-class community of technical professionals who support the skilling journeys of our customers. Our enrollment process is designed to validate the technical skills and instructional capabilities of trainers who want to earn the Microsoft Certified Trainer status.

To qualify as a Microsoft Certified Trainer, professionals must meet 3 requirements for enrollment. The subsequent sections of this page provide details for each of these MCT requirements:

1. Review and agree to the MCT Program Agreement.
2. Possess a valid MCT-qualifying credential.
3. Provide verified proof of instructional skills through a Microsoft-approved provider.

NOTE: Your MCT-qualifying certification must be valid (not expired) to qualify for the MCT program. An expired certification will show in your MS Learn transcript as N/A with no future date.

Review and Agree to MCT Program Agreement

To begin the MCT enrollment process, first review the MCT Program Agreement for terms and conditions of membership in the MCT Program. You will be asked to acknowledge and adhere to these terms when you submit your MCT application.

Obtain an MCT-Qualifying Credential

Only one (1) MCT-qualifying certification is required to enroll or renew membership in the MCT Program. However, MCTs are required to hold an associated certification(s) for all Microsoft courses they facilitate.

Credential Requirement Details

Your Microsoft Learn user profile must include either the AB-730 or AB-731 certification. This requirement ensures that MCTs possess a foundational level of AI/Copilot.

Provide Verified Proof of Instructional Skills

As premier instructors of Microsoft technologies, MCT candidates must prove they possess the instructional skills needed to deliver engaging, world-class training experiences to our learners.

New candidates applying to the MCT Program must verify their instructional skills.

Instructional Skills Requirement Details

You must complete the MCT Onboarding Experience, which is a 3-day program onboarding course taught by existing MCTs.

For more information on the MCT Onboarding Experience, please visit MCT Onboarding Program | Microsoft Learn.

Prospective MCTs may be exempt from the MCT Onboarding Experience requirement if they:

- Have been an active MCT within three years of their application date; or
- Are associated with a TSP in Higher Education; or
- Are a Full Time Employee at Microsoft.

For more information on exemptions, please visit the MCT Portal by Pearson.

MCT status must be renewed each year to remain a member of the MCT Program. Verified proof of instructional skills is only required for your initial enrollment in the MCT Program.

Once you become a qualified MCT, you will not be required to complete an instructional skills program for your annual MCT renewal process, unless your MCT membership lapses.

Please Note: The MCT Onboarding Experience is currently only available in the English language. For prospective MCTs whose primary mode of instruction is in a language other than English, legacy ISCP Certificates will be honored through December 31, 2026. For more information, please visit MCT Onboarding Program | Microsoft Learn.

For more information on exemptions, please visit the MCT Portal by Pearson or email mctprog@microsoft.com.

Get Support

If you require assistance or clarification during the MCT enrollment process, reach out to MCT Support at mctprog@microsoft.com. A member of the Microsoft Support Team will respond to you within 24 business hours.

Volume Licensing for Microsoft training and certification solutions

Article • 12/04/2023

Microsoft training and certification solutions help businesses and accredited academic institutions accelerate adoption and use of Microsoft technologies. With these enterprise-ready, direct-from-the-source training and certification resources, your employees can gain the skills they need to work more efficiently and productively and students can gain the technology skills needed to be more successful in school and future careers.

Microsoft certification solutions for Advanced Role-Based (ARB) certification exams are available through the **Microsoft Volume Licensing** program, a customizable Microsoft software purchase program that grants discounted access to Microsoft certification solutions.

By consolidating the purchasing, budgeting, and tracking of the Microsoft certification solutions product SKUs described on this page with other Microsoft technology purchases through Volume Licensing, academic institutions can achieve significant cost savings (depending on the geography, product, and Volume Licensing contract level) – see below.

For more details about purchasing other Microsoft Official Certification exams such as Microsoft Office Specialist, Microsoft Certified Educator, and Microsoft Fundamentals – see below

- Microsoft Certification exam vouchers

  Microsoft Certified Professionals on staff can enhance your academic institution's competitive advantage, help increase student satisfaction, and reduce network downtime.

- Microsoft Certification class packs of Advanced Role-Based exams for academic institutions

  With Microsoft Certifications, you can validate your students' technology skills, helping them to differentiate themselves and to enhance their education and career prospects. Plus, you can use Microsoft Certifications to support your faculty and staff professional development goals.

  You can order exam class packs (qty. 30 exam vouchers) that put students on the path to earning a Microsoft Certification. Certification exam class packs include

exam vouchers that you can use over the course of one year. Exams may be taken by students, educators or staff online or at an authorized testing center. Whether for a high school, vocational school, two-year college, or four-year college or university, you can tailor a mix of certifications to meet your unique needs.

Expand table

Microsoft volume license SKUs for Advanced Role-Based certifications		
Program - Worldwide	**Part or SKU #**	**Microsoft Certified Professional (MCP) + MTC Fundamentals Certification Class Packs**
------	-----	-------
OVS (Level E)	H5T-00001	Cert in Acad VL Fee OLV E EA AP Fund-MCP Cert Pack (30)
OVS (Level F)	H5T-00002	Cert in Acad VL Fee OLV F EA Acad AP Fund-MCP Cert Pack (30)
EES, Campus, School	H5T-00003	Cert in Acad VL Fee Fund-MCP Cert Pack (30)

You can order your Microsoft Certification exam packs through the following Microsoft Academic Volume Licensing programs:

EES (Enrollment for Education Solutions), School, and OVS-ES (Open Value Subscription – Education Enrollment subscriptions) volume license subscriptions. For more information, contact your Academic Licensing Reseller or visit the Microsoft Licensing programs for industries page.

As of July 1, 2023, Microsoft Office Specialist (MOS), Microsoft Fundamentals (Fundamentals), and Microsoft Certified Educator (MCE) academic certifications will be available to purchase directly through Certiport and its partner network and will no longer be sold directly by Microsoft. Certiport, as Microsoft's key global exam delivery partner, will continue to sell MOS, MCE, and Fundamentals certifications directly to academic customers.

To help you purchase MOS, Fundamentals, and MCE certification exams, Certiport has put together this alias to route you to the right person on their team who can help you place an order: vlsales@pearson.com.

Microsoft is no longer selling e-learning in Volume Licensing. The following resources are for customers who are still consuming our e-learning content under their existing contracts. They are meant to help you deploy, configure, and administer your Volume Licensing e-learning purchase.

  - Volume Licensing Online Services Manager Guide to Online Use.
  - Volume Licensing End User/Student Guide to Online Use.

- Contact us

  To get started with Microsoft Advanced Role-Based certification products, contact your Microsoft academic reseller or access the How To Buy - Education Solutions - Microsoft Education page.

Frequently asked questions

The following questions specifically address Volume Licensing for Microsoft certification solutions. Visit the certification overview or exam policies and FAQ pages for answers to general questions regarding Microsoft Certification or the exams.

Microsoft training and certification solutions

What products are supported by Microsoft certification solutions?

Microsoft training and certification solutions support Microsoft solution areas, including (copy categories from Jeff's cert roadmap to confirm the below list):

- Cloud and infrastructure
- Data and AI
- Modern work
- Security, compliance, and identity

As Microsoft adds or changes solutions areas, our certification program will be updated to reflect those priorities: Browse Certifications and Exams | Microsoft Learn.

In what regions can I purchase certification products through my Volume Licensing agreement?

Microsoft certification solutions are available within Volume Licensing in all regions. Contact your Microsoft academic reseller with any questions about pricing, licensing, and accelerated discounting or access the How To Buy - Education Solutions - Microsoft Education page.

Product access and usage

If I acquire a Microsoft certification solutions license, how do I access the content?

You can access content for Microsoft certification solutions (Microsoft Certification Program exam vouchers) by using access codes. Access codes put the choice of learning in the hands of your educators and staff to best serve the campus or school community. As an administrator, you will receive your access codes digitally within a few business days of transacting your Volume Licensing agreement term. You can activate the codes at any time during the agreement term.

- **Microsoft Certification Program exam voucher codes**. You can register to take one exam for each Microsoft Certification Program exam voucher code. Exam voucher codes can only be used once.

If I do not use all the codes acquired during my agreement can I receive a refund for the unused codes?

No, all exam codes are valid for one year from the date of issuance. All unused codes expire after 12 months. Customers will not receive a refund for any unused codes.

After I place an order, how long does it take to receive exam voucher codes?

The order will be acknowledged within 48 hours of being processed by Microsoft. You will receive access codes within 5 to 7 business days after the order is invoiced by Microsoft. Contact mslex-vlsupport@microsoft.com if you have any questions about fulfilment of MCP access codes purchased via volume licensing.

How many codes should I acquire?

The more codes your organization acquires, the greater the volume discount you receive. We recommend that you use one of the following resources to determine your organization's training needs and to develop a learning plan that aligns with your company's business goals.

- Send an email message to Microsoft training and certification solutions Volume Licensing.
- Find your local Microsoft Certified Partner for Microsoft training and certification solutions.

How many exam vouchers should I order?

To determine how many vouchers you need, first determine:

- The number of people or students in your organization who need to be certified.

- Which certifications each learner needs.
- The number of exams required for each certification.
- The amount of time each learner requires to achieve certification.
- The number of months remaining on your license agreement.

Remember that it is important for your learner to gain hands-on experience with Microsoft products. We recommend three to nine months of preparation for certifications depending on the level or complexity of the subject matter.

Microsoft Certification exam packs for academic institutions

Which curriculum options are available to prepare for the exams?

Each exam has preparation materials available. Choose the exam from the new exams list, and then look for the exam's available preparation options.

Microsoft Certified Trainer (MCT) program	Your question may be answered on our page about the Microsoft Certified Trainer program overview. MCT resources, events, and discussion forums are provided at MCT Lounge. To join this dedicated MCT community space, MCTs must first request access by following the MCT Lounge Access Request process. For issues with enrollment, benefits, or training courses, get help through MCT Support.

How to submit a support request

Step 1. Go to online support request

- For Product family, confirm that **"Learning"** is selected.
- Under Product or Service, confirm that **"Microsoft Credentials"** is selected.
- Select a high-level category most closely matching your issue.
- For Types of Support, select **Professional No Charge**.
- Input your **location** and **time zone**.
  - Select **"Email"** as preferred contact method.
  - **Note:** Credentials support is only available through email and not by phone. If you select "Phone," support will still be provided via email.

Step 2. Describe the issue

- Provide a clear summary of the issue.
- Attach screenshots of any error message or technical issue to help us understand the problem.

Step 3. Contact Details and Sharing

- The person submitting the case is the "Primary Contact" for the support case.

Step 4. Submit support case

- Your case number will be displayed and confirmed in an email from support@mail.support.microsoft.com (Check your junk folder).
- Credentials Support will contact you during business hours, 6 AM - 6 PM PT, to resolve the issue.

- You can **check your case status** online, using the Manage tab on the online support request.

Assessment lab frequently asked questions

Assessment lab overview FAQ

What is an Applied Skills assessment lab?

The Applied Skills assessment lab gives you the opportunity to demonstrate your skills by completing tasks in the associated technology, such as Azure, Microsoft 365, or Power Platform. You will perform tasks in a virtual environment. The virtual machine is remotely connected to a live environment where you perform tasks on real software and applications.

In the lab, you will be asked to perform several tasks. The guidelines and requirements for completing these tasks can be found in a series of email messages that are accessed through the lab environment. You will complete these tasks using tools, such as the Azure Portal, the Microsoft 365 Admin Center, Azure CloudShell, etc. Unless the email states otherwise, you can complete the task using any method or tool.

What can I expect during the assessment process?

You will perform tasks in a virtual environment. The virtual machine is remotely connected to a live environment where you perform tasks on real software and applications.

It will take a few minutes to load the lab. You may do other activities while it loads. You will NOT be able to save your work and come back later, so plan to complete all the tasks in a single session. The actions you take while completing the assessment lab will be recorded for quality control purposes.

After the lab launches, start by reviewing the **Instructions**, located in a pane on the right side of the lab environment. These instructions provide important information for accessing and completing the lab. **Step 1** details the lab scenario.

Step 2 provides information on how to access the email messages. To access them, select the "Open Emails" button on the **Instructions** pane. This will open an interface in the lab environment that simulates an Outlook inbox. Read all the emails before beginning to understand the full scope of what's required in the lab.

Your username and password are provided in **Step 3** of the **Instructions**. To log into the associated technology (e.g., Azure, Microsoft 365 admin console, etc.), simply select the username, and it will automatically complete the username field. Do the same for your password after entering your username.

In the **Troubleshooting** section of the **Instructions** pane, you will find key tips for navigating the lab environment.

After you leave a lab, you will not be able to return to it because scoring starts in the background as soon as you exit a lab.

To learn more about the assessment lab experience, watch this tutorial.

How much time will I have to complete the lab?

If you are taking a beginner assessment lab, you will have 30 minutes to complete it. If you are taking an intermediate or expert assessment lab, you will have 45 minutes to complete it. In both cases, you will have the ability to request a limited amount of additional time.

How do I prepare my computer to take an assessment lab?

1. Review the System Readiness FAQs to ensure that your computer meets the minimum requirements for a successful lab delivery.
2. Review the Assessment Lab Interface FAQs to get familiar with the lab UI.
3. Run a speed test.
4. Check to see if your machine can connect and function within the lab environment by launching the Lab Orientation & Connectivity Check.

Why do I need to accept third party cookies?

Applied Skills assessment labs require third-party cookies enabled in your browser settings.

For more information about Microsoft's use of cookies, refer to the Microsoft Privacy Statement.

Why did I have to wait before I could start my assessment lab?

It takes time to provision the environment in the cloud, and the environment you will access to complete the tasks is loaded only when the resources are fully provisioned.

You will be informed how long it will take to load, and you may do other activities while it loads.

Why did the launch page say that the lab was “resuming”?

You will see an image like this one when launching the lab. All Applied Skills assessment labs are pre-instanced and placed into a saved state. This allows for shorter launch times. Any time an assessment is launched by a learner, they will receive the "resuming" message because the lab is resuming from that saved state.

The VM inside the lab is too small or the resolution is too small. What should I do?

The default resolution setting for the VMs is 1024 x 768. You are most likely launching at a lower resolution. If you increase your resolution to the default or higher, that should solve the issue.

When I launch the assessment lab, the emails don't open? What should I do?

Select "Open Emails" on the Instructions pane. If you are still unable to open the emails navigate to: C:\email\email.html in the virtual machine. The e-mails are in an HTML file.

What should I do if the Azure portal or the Microsoft 365 admin center does NOT open immediately?

If your lab launches with a blank white screen, or an authentication error in one of the portals, try opening a new tab and navigating to https://portal.azure.com or https://admin.microsoft.com/ **in the virtual machine**. Make sure you do this in the virtual machine; we will NOT be able to score your work if you open the portal on your machine rather than the virtual machine. Opening the portal in this way will resolve the issue most of the time.

I'm having issues logging into Azure/Microsoft 365/Dynamics 365 when I access the assessment lab. What should I do?

Clear the credential cache in the Windows Credential Manager by taking the following steps:

- Close Edge.
- Start -> Search for "Credential Manager."
- Select the specific credentials and select "Remove."
- Try logging in again.

If that doesn't work, clear the browser cache. If you are still unable to log in, please contact Support.

Do I need to type in my username and password?

No, you don't need to type your username or password. Simply select your username from Step 3 of the **Instructions** pane, and your username will automatically be added to the username space in your login credentials. Do the same for your password after your username is entered. Alternatively, you can copy and paste both your username and password.

The emails in the assessment lab are asking me to perform several tasks. Should I perform them in a specific order?

In general, we have tried to design the assessment labs so that you can perform the tasks in any order. However, we recommend that you read through all the emails before you start because there may be some tasks that require other tasks to be fully executed before those tasks can be performed correctly.

Remember to read the tasks carefully and only do what's required to solve the problem posed in the task.

Some tasks require the deployment of resources in Azure. What should I do if the deployment in Azure takes a long time?

Read through the remaining emails if you haven't done so already. If you have carefully read the emails, perform a task that is not dependent on that task to finish executing so you can maximize your time.

In some cases, starting a task may be sufficient for scoring (for example, creating a resource in Azure); you can let the task execute in the background while you work on other tasks. If you only need to start a task, you will be notified in the guidelines provided in the associate email. You can move on to other tasks without being penalized.

Why is the lab being recorded? What does that mean?

The actions you take during the lab will be recorded for quality control purposes. This is being done to ensure that if anything unexpected happens during the assessment lab we can investigate the issue and make any necessary adjustments to the assessment lab or email content. With the pace at which technology is changing, Microsoft often changes features and

functionality that could change the assessment lab experience. Recording the actions that you take during the assessment lab is one of the ways that we can rapidly identify changes that impact the assessment lab and scoring and respond.

Only the actions that you take in the assessment lab are recorded. Neither your face nor your voice will be recorded, and no actions taken outside the assessment lab environment will be recorded.

What happens if I lose my internet connection while completing an assessment lab?

If you lose connection to the lab, you'll receive a warning that asks you to retry the connection. If you're able to reconnect within 15 minutes, you will not lose any work, and you'll be able to complete the lab.

Lose My Internet Connection

Note that labs will only be scored if you are able to "submit" them for scoring. If the assessment lab is launched, it is considered an attempt, and the retake policy applies.

System readiness FAQs

What are the system requirements for the assessment labs?

To launch and use a lab, the following requirements must be met:

1. Use a supported operating system:
    - Windows 7 or later
    - Ubuntu 14.04 or later (or comparable distribution)'
    - macOS 10.12 or later
2. Have the latest version (strongly recommended) of Edge, Chrome, Firefox, or Safari. Chromium based browsers, such as Opera or Vivaldi, can connect, but default hotkeys they set may interfere with lab inputs. They are not recommended. At a minimum:

Expand table

Browser	Version
Chrome	16+
Firefox1	11+

Browser	Version
Microsoft Edge	1+

3. Be connected to a network that allows at least one of the following:

    - Secure Web sockets on HTTPS port 443 and 43443
    - RDP over port 21xxx or 443 (Enhanced control)

4. Meet the bandwidth requirements:

    - Minimum 200kbps consistent bandwidth with 1mbps burst.
        - Machine controller bandwidth consumption is based on the rate onscreen content changes, some scenarios (i.e., web browsing inside the lab) may require more.
        - For optimal experience, we recommend at least 1mbps.
    - When using Cloud Slice labs where the target environment is a website, additional bandwidth may be required.
        - For the Azure management portals, we recommend at least 512kbps.

5. Be sure to complete the assessment lab using a laptop or desktop computer. We strongly recommend that you do not attempt to complete the lab on a mobile device or a tablet (unless it's connected to a large monitor); your experience is likely to suffer as a result.

How can I see the quality of my connection to my lab?

Just to the left of the title of the lab, you can see a visual representation of the "number of bars" that you have. It will show several bars in increasing size. The more bars, the better your connection is at that moment.

You can view your lab latency (measured in milliseconds) by hovering your mouse cursor over the connection bars in the lab.

- 0 - 100 milliseconds = Excellent (4 bars)
- 100 - 250 milliseconds = Good (3 bars)
- 250 - 500 milliseconds = OK (2 bars)
- 500 milliseconds or higher = Poor (1 bars)

This measures the network latency between your browser and the server where the VMs are hosted. This is the last latency value received from your machine. Large latency numbers may cause your lab to seem sluggish or even non-responsive. The issue may be with your network, internet provider, the overall internet health, or the lab host.

You can check to see if your machine can connect and function within the lab environment by launching the Lab Orientation & Connectivity Check.

How will I be able to determine if my lab issue is related to connectivity?

If you experience a blank or black screen, this may be due to a connectivity issue. A common symptom of slow labs is a delay in input from the mouse or keyboard. Even with sufficient internet bandwidth, latency issues may still arise due to hops along the path, and datacenter connectivity.

You may receive an error message, such as: "***The Connection to your lab machines appears to have been interrupted***"

How do I fix assessment lab connectivity issues?

- **Work Issued Device:** If you are using a work issued device, please try > using a personal device instead. Your company device could have built in > protocols that could prohibit access to remote sessions, causing connection > issues to your labs.
- **Managed Network:** If the lab is being run through a managed network > through your Work or school, please review our Connectivity Requirements and have your IT department look over all the necessary requirements.
- **Lab Latency Indicator:** The lab interface latency indicator may show latency as good or excellent. This does not rule out problems with the local connection as it only considers the current latency and does not test for firewall or routing problems. There are "hops" between the initial lab launch location and our hosts that can fail and are also not detected by the in-lab indicator.
- **Run a Speed Test:** If you are experiencing frequent disconnects or lag when controlling your machines, you may run a speed test. This page allows you to run a connection assessment test. A connection assessment test is a very deep and thorough test that measures throughput speed, capacity, and packet quality to assess the user experience of a connection to their respective data center. This includes efficiency, data loss, recovery, duplication of data, retransmissions and even corruption.

If these don't apply to your situation, please take the following steps to rule out your local connection.

- **VPN/Proxy:** While you can have success with VPN's, they are not recommended as certain configuration requirements must be met to avoid issues properly connecting with the lab: Proxy Requirements.

- **Use a hardwired connection:** Hotspots, Wi-Fi, cellular, and satellite internet typically have higher latency and can cause packet loss, which can result in a poor lab experience.
- **Review your security software:** Turn off any third-party anti-virus programs, pop up blockers, add blockers, Etc.
- **Review your network:** Port 443 must be open for inbound and outbound traffic. Additional firewall exceptions may be needed. Please review our Connectivity Requirements.
- **Reset your local Network:** Power cycle your modem and router.
- **Confirm your bandwidth:** The minimum Speed for labs is 200kbps up and down consistent/1mbps burst, Per user.
- **Try a different browser:** Some browser extensions can cause certain aspects of our lab environments to not load correctly.
- **Try a different computer:** Some work-issued computers have built-in software that cannot be disabled, sometimes this software interferes with connection to our service. If possible, please try a personal computer.

You also want to review these FAQs for more information.

Assessment lab interface FAQ

How do I interact and use the lab interface?

Within the lab interface, some buttons expand to display a menu of options.

Display a Menu

1. **Full Screen:** Sets the lab to display in a full screen window.
   NOTE: Because the lab is delivered through an iframe, Full Screen mode will NOT result in the lab or VM opening to the full size of your monitor. The size of the “full” screen is limited to the size of the iframe.

2. **Power and Display menu:** Contains display settings. See the Display menu section for more information.

3. **Commands menu:** Contains advanced lab functions. See the Commands menu section for more information.

4. **Lab instruction pane:** Displays the lab instructions.

5. **Settings:** Change the Text Size, Color Mode, and Actions splits the instruction pane from the virtual window.

6. **Open Virtual Machine in a new window:** Opens the virtual machine in new window.

- With this, the instructions will open in a separate window.
- You can open the VM into full screen.
- You can move the windows around the screen or across monitors.
- To return to combine them into one window, close one of the windows.

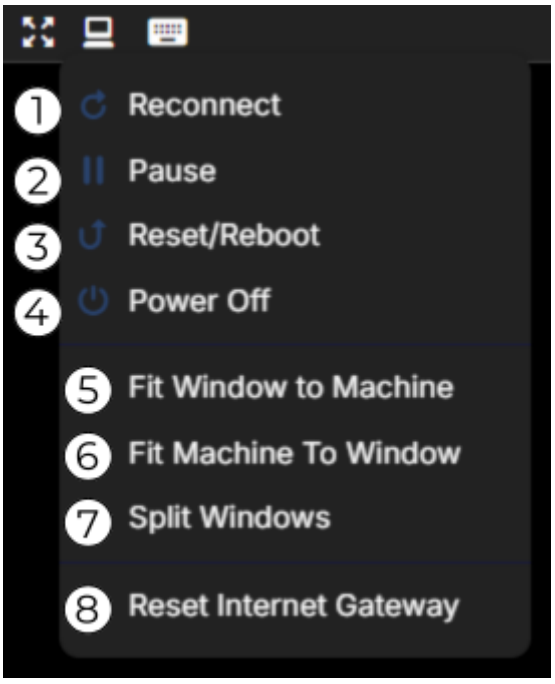
7. **Instruction resizer:** Drag left and right to adjust the size of the instruction pane.
8. **Timer/Time Remaining:** Indicates the amount of time remaining in the lab session.
9. **Virtual machine:** The virtual machine window.

Commands Menu

Display a Menu

1. **Ctrl+Alt+Delete:** Sends the Ctrl-Alt-Delete key combination to the virtual machine.
2. **ALT+Tab:** Sends the ALT+Tab key combination to the virtual machine.
3. **Windows Key:** Sends the Windows key command to the virtual machine.
4. **Type Text**:
   A. **Type Username:** Types the username into the virtual machine at the current cursor position.
   B. **Type Password:** Types the password into the virtual machine at the current cursor position.
   C. **Type Clipboard Text:** Opens a dialog box to paste text into from your local clipboard and paste into the virtual machine at the current cursor position.
5. **Virtual Keyboard:** This enables an on-screen virtual keyboard that can be used to input keystrokes into the virtual machine.

Power and Display Menu



1. **Reconnect:** This will reconnect your local machine to the remote virtual machine, if the connection is interrupted.
2. **Pause:** This puts the virtual machine into a paused state. Once it's paused, it must be resumed to continue using the virtual machine.
3. **Reset/Reboot:** This reboots the virtual machine. This **does not** gracefully shut down the machine. It's recommended to save your work before using this.
4. **Power Off:** This powers down the virtual machine.
5. **Fit Window to Machine:** This resizes the browser window to match the resolution of the virtual machine.
6. **Fit Machine to Window:** This resizes the virtual machine to fit the browser window.
7. **Split Windows:** splits the instruction pane from the virtual window.
8. **Reset Internet Gateway:** Resets the gateway that the virtual machine uses to connect to the internet.

How do I make my international keyboard work in the lab interface?

Learn more about using an international keyboard.

How do I extend the amount of time on the lab timer?

Each assessment lab has a timer in the lower-right corner showing you the amount of time that you have left to complete the assessment lab.

When there are less than 10 minutes remaining, you may extend the time through a pop-up window by clicking **Yes**. The amount of time you can extend the lab will vary depending on the lab. The time you can extend is noted in the pop-up window.

How do I remove the scroll bars in my lab's virtual machine?

Learn more about removing scroll bars in virtual machines.

How do I make my assessment lab display in full screen?

Learn more about displaying in full screen.

How do I resize the screen resolution setting on my computer to view the lab better?

Learn more about resizing screen resolution.

How does the exit menu work?

You should not exit the lab until you have completed it and submitted it for scoring. If you do, you'll lose any work that you have done and will not be able to return to the lab to complete it (there is no "save and come back later" option).

Note that if you exit the assessment lab for any reason, your lab will be scored on the actions that you took prior to ending the lab. This will count as an attempt and the retake policy will apply.

Assessment lab scoring FAQs

I received the same score each time I took the same assessment. Is something wrong?

No, receiving the same score on multiple attempts does not indicate an error. It's not uncommon for candidates to earn similar or identical scores on multiple attempts. This consistent result demonstrates the reliability of the assessment lab in evaluating skills. If this happens, consider other ways to learn and practice. Learn more about how to prepare for an Applied Skills assessment lab.

Does the score report show a numerical score for each skill?

No, we provide an overall passing result as well as skill level information to show your strengths and weaknesses more clearly

The chart showing the skill level results showed that I performed well in most of the skills. Why didn't I pass?

Because each skill is assessed by a different number of tasks, you cannot combine the results across the skills to determine your overall result. In other words, there is no one-to-one relationship between skill performance and your pass/fail status.

My assessment lab ended abruptly. Will it be scored?

No. Labs will only be scored if you "submit" them for scoring. Note that if the assessment lab is launched, it is considered an attempt, and the retake policy applies.

Last updated on 11/21/2025

Exam frequently asked questions

Exam basics

How long is the exam and what types of questions can I expect?

Visit: Exam duration and exam experience.

Can I take a break during my exam?

Yes. We have added 5 minutes to our exams to allow for unscheduled breaks that do not need to be requested in advance. Visit: Unscheduled breaks on exams.

If you need more than 5 minutes for breaks, you may request additional time through our accommodation process.

How should I prepare for an exam?

Visit: Prepare for an exam.

How do I register for a Microsoft Certification exam?

Visit: Register and schedule an exam.

What is my window for scheduling an exam?

You can schedule certification exams through Pearson VUE no more than 90 days in advance. If you have questions on this policy, visit: Pearson VUE customer service for test-takers.

How many exams can I schedule at any point in time?

Effective January 16, 2023, you can have a maximum of two Microsoft Certification exams scheduled at a time, either on the same day or on separate days through Pearson VUE. After you take (or cancel) one of these exams, you can register for another. Please note, there are no changes to exam scheduling through Certiport. Visit: Register and schedule an exam.

Am I required to take an exam in English?

Microsoft Certification exams are available in several languages. However, if you must take an exam in English rather than in your native language, you can request an accommodation for additional time. Approval for extra time is provided on a case-by-case basis and needs to be requested in advance of the exam. This should be requested through the English as a Second Language process.

What disability accommodations are available?

Visit: Request accommodations.

How much do exams cost?

Associate and Expert exams typically cost US$165 but are priced according to currency values in specific countries and regions. Exam prices are subject to change. In some countries and regions, additional taxes may apply.

- For exact pricing for Microsoft Office Specialist (MOS), contact Certiport.
- For all other exams, browse all exams to find the exam page where you will find the price of the exam.
- Special packages may also be available, for additional details visit: Offers.
- Academic pricing is also available, for additional details visit: Student discounts.

How can I provide feedback about study materials or training for the exam?

If you have feedback about an instructor-led Microsoft training course, provide it directly to the instructor. If you have feedback about a Microsoft online course, complete the feedback form that appears when you finish the course. Microsoft does not review study materials developed by third parties and is not responsible for their content. If you have questions or comments about exam preparation materials developed by third parties, please contact the publishers directly.

How can I submit feedback about an exam question or exam experience?

- If you have a concern about the technical accuracy of a particular item, please visit: Exam item challenge process.

- To report a concern about a testing center or technical difficulties experienced during your exam, please contact customer service at the appropriate exam delivery provider.
- To report a security concern, please complete this form.
- To offer other types of feedback, please contact Credentials Support.

Exam specifics

How does Microsoft decide how many questions on a particular subject to include on the exam?

The skills measured on an exam are identified by subject matter experts external to Microsoft (in other words, they are not Microsoft employees). This list of skills, called the "objective domain," is the basis for exam development. The number of questions that measure each skill area is determined through the blueprinting process; sections of the exam measuring critical and/or more frequently performed skills will contain more questions than those that assess less important or less frequently performed skills.

Why is the case study exam format used?

The case study exam format uses complex scenarios that more accurately simulate what professionals do on the job. Scenario-based questions included in the case studies are designed to test your ability to identify the critical information needed to solve a problem and then analyze and synthesize it to make decisions. You can refer to scenario details as often as you'd like while you are working on questions in a case study.

After I complete a case study, will I be able to review the questions?

You may review the questions in a case study until you move to the next case or section of the exam. Once you leave a case study, however, you will not be able to review the questions associated with that case. When you complete a case study and its associated questions, a review screen will appear. This screen lets you review your answers and make changes before you move to the next case study.

Case studies are not timed separately from the rest of the exam. The number of case studies in an exam is noted on the exam introduction screen. Manage your exam time accordingly so that you can complete all case studies and all other sections of your exam.

What is the process for determining if an exam has been updated when a new feature or function is added or when something has changed in the associated technology?

We review our cloud-based exams quarterly. Any changes that affect the objective domain and the existing questions are incorporated into the exam. Specifically, technically inaccurate questions are removed from the exam; some items are modified, and new items may be created to assess new, but related, skills.

Microsoft reserves the right to update content for any reason at any time to maintain the validity and relevance of our certifications. This includes, but is not limited to, incorporating functionality and features related to technology changes, changing skills needed for success within a job role, etc.

While most questions cover features that are General Availability (GA), the exam may contain questions on Preview features if those features are commonly used.

Will the training kits, books, courseware, and other exam preparation materials be updated when the exam changes?

Microsoft makes every attempt to keep the training and exam aligned when changes occur; however, that is not always possible. Keep in mind that Microsoft exams are not intended as post-tests of any preparation or training product created by Microsoft or any third-party provider. Our certifications are designed to measure experience-based skills regardless of the way candidates obtain these skills.

The best way to prepare for an exam is to practice the skills listed in the “Skills measured” section of the exam details page. Hands-on experience with the technology is required to successfully pass Microsoft Certification exams.

Microsoft does not review study materials developed by third parties and is not responsible for their content or for ensuring that they are updated to reflect product updates. If you have questions or comments about exam preparation materials developed by third parties, please contact the publishers directly.

Why did an exam include material that was not covered in the Microsoft training or Microsoft Press book?

All learning materials related to a given job role are built from the same job task analysis. As a result, the learning content should be closely aligned to the exams. Keep in mind, however, that the learning materials are developed independently of exam content because the exams are intended to assess competence in the job role, not the effectiveness of training materials or learning. Because the exams are designed to assess your ability to apply skills beyond what was explicitly covered in the learning, the skills will be assessed at a higher level than what was taught in the training. For some candidates, this can give the impression that the skill was not taught in the associated learning; however, all skills assessed on the exam are included in our learning options.

Microsoft works hard to ensure that some form of training material exists for all skills that will be measured on an exam. A list of these resources can be found on the exam details page.

Scoring and results

How are exams scored?

Visit: Exam scoring and score reports.

What is the exam retake policy?

Visit: Exam retake policy.

Can I request a re-evaluation of my score?

If you have a concern about the technical accuracy of a particular item, visit Exam item challenge process. Because Microsoft must ensure that candidates who pass exams and earn our certifications have demonstrated the required proficiency level(s) across the skill domain(s), the final result of an exam is rarely changed based on a re-evaluation of your exam results. Even if a question is flawed in some way, we cannot assume that you would have answered it correctly if it had not been. In these cases, we provide candidates with the opportunity to retake the exam free of charge.

How can I challenge an exam question?

Visit: Exam item challenge process.

If I do not pass an exam, can I have a refund?

No. Microsoft does not offer refunds for exams you do not pass or exam appointments you miss.

Exam security

What is the exam security policy?

Visit: Exam security policy.

Performance-based testing

What is performance-based testing (PBT)?

Performance based testing gives you the opportunity to demonstrate your skills by completing tasks in the technology. Today, this means completing tasks in a graded lab, but in the future, PBT may take a different form. For example, for those of you who are currently performing the job role, Microsoft is exploring ways to incorporate the work that you do every day into our certification requirements. For those of you who are not in the job role yet, we'll continue to have other ways for you to demonstrate your skills through portfolios and graded labs. Microsoft is constantly innovating to ensure that we assess your skills and abilities in ways that align to how you actually get your work done. To view the PBT tutorial video, click here.

What can I expect when I complete the labs?

This type of question asks you to perform tasks in a virtual environment. You will see a screen that includes a virtual machine window and a Tasks pane. The virtual machine window is a remotely connected live environment where you perform tasks on real software and applications.

The Tasks pane lists the tasks you need to perform in the lab. You can expand or collapse each task with the + or - symbols. For your convenience, each task has a checkbox so you can mark tasks as you complete them. Doing this won't affect anything in the lab or scoring. Nothing in the lab will indicate if you did not complete a required task, so you may want to keep track of the tasks that you have completed by checking the boxes.

After you leave a lab, you will not be able to return to it because scoring starts (in the background) as soon as you leave a lab. When you click Next, you will be asked to confirm that you really want to leave the lab. Clicking Yes will end the lab section, and the tasks will be scored.

How is the exam structured when it has labs?

When you launch the exam, you will see a screen that tells you how many items, case studies, and labs, including the number of tasks, that will be on the exam. Please make note of this information so that you can plan your exam time accordingly.

After you launch the exam, you will answer all of the traditional questions (for example, multiple choice, drag and drop, build list, etc.) on the exam as the labs load. The lab(s) will be the last section of the exam. Please note the following:

- After you leave any section of the exam (e.g., case study or labs), you cannot return to it. However, at the end of most sections, you have the opportunity to review your answers (your exam may include a section that cannot be reviewed; this is noted at the beginning of the section). **Exam time does NOT stop while you are reviewing your answers. Make sure you manage your time**; pay attention to the time AND number of questions remaining.
- Exams with labs contain one or two performance sections/labs with multiple tasks that you must complete. Research shows that tasks take approximately 3 times longer to complete than a traditional item. Please manage your time so that are able to complete the labs in the time remaining when you get to them. We have ensured that candidates who manage their time wisely will have more than enough time to complete the lab(s).
- The number of labs and tasks on the exam is provided on the overview page preceding the first lab. Read it! And then, manage your time accordingly.
- Do NOT wait for tasks to execute before moving onto another task. In some cases, you need something to execute before you can complete another task, but this will be noted in the task, and there will be other tasks that you can be working on while that task executes. **Don't lose time waiting for tasks to run**. Move onto something that is not dependent on that task so you can maximize your exam time. In some cases, starting a task may be sufficient for scoring (for example, creating a resource in Azure); you can let the task execute in the background while you work on other tasks. We include a note in the task list telling you that you only need to start the task. You can move on to other tasks or even leave the section (move to the next lab if applicable or end the exam) without being penalized. **Read the task carefully. Do what's required to solve the problem posed in the task.**

Why does an exam with labs contain traditional question types (for example, multiple choice, drag and drop, build list, etc.)?

For a variety of reasons, we cannot assess all critical skills with labs. For example, we can't ask you to complete tasks that take more than a few minutes to run or that require significant resources; as a result, we will continue to assess those skills using question types that are more appropriate to the exam experience.

How many labs are on an exam? How many tasks are in each lab?

If an exam contains labs, it will have at least 1 lab. Each lab contains between 7–15 tasks. You will be told if the exam has labs and how many in the introduction to the exam.

How are tasks scored?

The tasks are scored based on the end result. We do not care how you accomplish the task (for example, through the UI or using PowerShell commands)—only that you successfully accomplished it. Complete the task as you normally would; the scoring script evaluates the end result based on the key characteristics to determine if it was done correctly. For example, if the task was to add a user, the scoring script ensures that you added that user.

We do NOT require you to use a specific method to perform tasks. If you are more comfortable using PowerShell or CLI, instead of a GUI, that's what we want you to use. We test you on the end result of your task—did you perform it correctly?—not on the method that you use to perform a task.

How many points is each task worth?

Most tasks are worth one point; if the task is worth more than one point, that information is provided in the task description.

How much time do I have to complete the labs?

Labs are not timed separately from the exam. At the beginning of the exam, the number of labs, case studies, and questions as well as the exam time will be provided in the introduction (read it!). You must answer all questions, including completing tasks associated with any labs, in the time

provided. Manage your time accordingly so that you can complete all activities that must be done.

Will I have enough time to complete the labs?

The labs are designed to be completed within the exam time provided. You will not be asked to perform tasks that execute long running operations or tasks that have many dependencies. If important skills need to be assessed that are based on tasks that require long running operations or have many dependencies, we will either assess them with traditional items, or, if possible, set up the labs so that these operations have already taken place, and then you will perform tasks that logically build on the outcomes of those operations.

How do you determine which tasks to include in the labs?

Like all questions on the exam, lab tasks map to the objective domain. We select the tasks that best lend themselves to lab-based assessment, that do not require long execution times or resources, and that can be completed within the anticipated time for test takers to complete the exam.

Why did I have to wait before I could start my lab?

It takes time to provision the environment in the cloud, and the environment you will access to complete the tasks is loaded only when the resources are fully provisioned. As a result, the exam begins with a series of traditional items (multiple choice, drag and drop, build list, etc.) that allows time to provision the labs and load them into the environment. If you answer these questions too quickly, you will have to wait for the labs to finish loading.

I have heard that labs can launch with a blank white screen. Is there something I can do to fix this?

If your lab launches with a blank white screen, try opening a new tab and navigating to https://portal.azure.com. Opening this new tab will resolve the issue most of the time.

I had some issues with my labs. How do I let Microsoft know?

If you run into issues with labs, please complete the Exam item challenge process. Although we won't be able to provide a specific explanation for your experience, our investigation will help us identify root causes and identify solutions that will improve the experience for everyone.

I had some issues with my labs. How do I request a rescore?

If you received a score, it is an accurate reflection of your performance on the exam; we have designed scoring to account for any lab issues that you may experience. If you failed, a rescore will not change that result.

When will I receive my score?

Labs take longer to score than traditional item types. Because the labs appear at the end of the exam, you may not get your result immediately. It can take 30 minutes or longer to receive a score. You do not have to wait for the score report. It will be passed automatically to our certification database and will show up in your MC dashboard. This should occur within 24 hours of the exam delivery. If it does not appear, please contact Credentials Support.

Do exams with performance-based questions take longer to complete?

Yes. These exams may take longer to complete than exams that do not contain performance-based items. The amount of time allotted for each exam takes this into account.

Should I prepare for the performance-based exams differently than I prepare for other exams?

No. The skills measured remain the same regardless of the format of the question. The knowledge and skills assessed on the exam are listed in the "Skills measured" section of the exam details page. If you practice the skills, you'll be prepared for any item type, including labs.

Are there any specific test center requirements for exams that have labs? Many test centers are not listed when I try to schedule the exams that have labs, but the same test centers are listed for exams that do not.

Exams that include labs require testing centers to meet certain internet connectivity requirements, so a smaller set of testing centers are available. As labs are added to more of the new role-based exams, they will also be subject to these testing center limitations. If you have specific testing centers in mind, contact the specific test center to learn if they can deliver labs; alternately, they will not be listed as available test centers once you select the exam. If that occurs, we recommend finding a different test center or taking the exam through online proctoring. In the future, you may be able to take labs through online proctoring, but we are currently limiting lab delivery to only test centers that meet the connectivity and technical requirements needed to deliver them successfully.

Where can I find a list of exams that contain labs?

We do not share a list of exams that have labs because the presence or absence of labs can literally change from one candidate to the next based on Azure availability, outages, and bandwidth, leading to escalations when candidates think the exam was to have labs but didn't.

The goal is to have labs on every role-based certification, so it is best to plan for labs as you're preparing. An added benefit is that by preparing as if the exam will have labs, you get additional experience that only puts you in a better spot to have the experience needed to pass the exam.

At the beginning of the exam, the instructions provide information on what to expect on the exam, including if it will have labs. Read the instructions carefully so you know if the exam contains labs (as well as case studies and other question types that may have different requirements than what's typical).

Practice Assessments frequently asked questions

What are Practice Assessments?

Practice Assessments are informal and voluntary tests taken as preparation for one of Microsoft's certification exams. These assessments are hosted on Microsoft Learn and contain example questions to provide insight into the difficulty of the certification exam and may help you determine if additional preparation is required before taking the exam.

These questions are not the same as what you will see on the exam nor is this document illustrative of the length of the exam or its complexity. For example, you may see additional question types, multiple case studies, and labs. These questions are examples only to provide

insight into what to expect on the exam and help you determine if additional preparation is required. Taking a Practice Assessment is not a replacement for training taken or experience using Microsoft products.

Why should I take Practice Assessments?

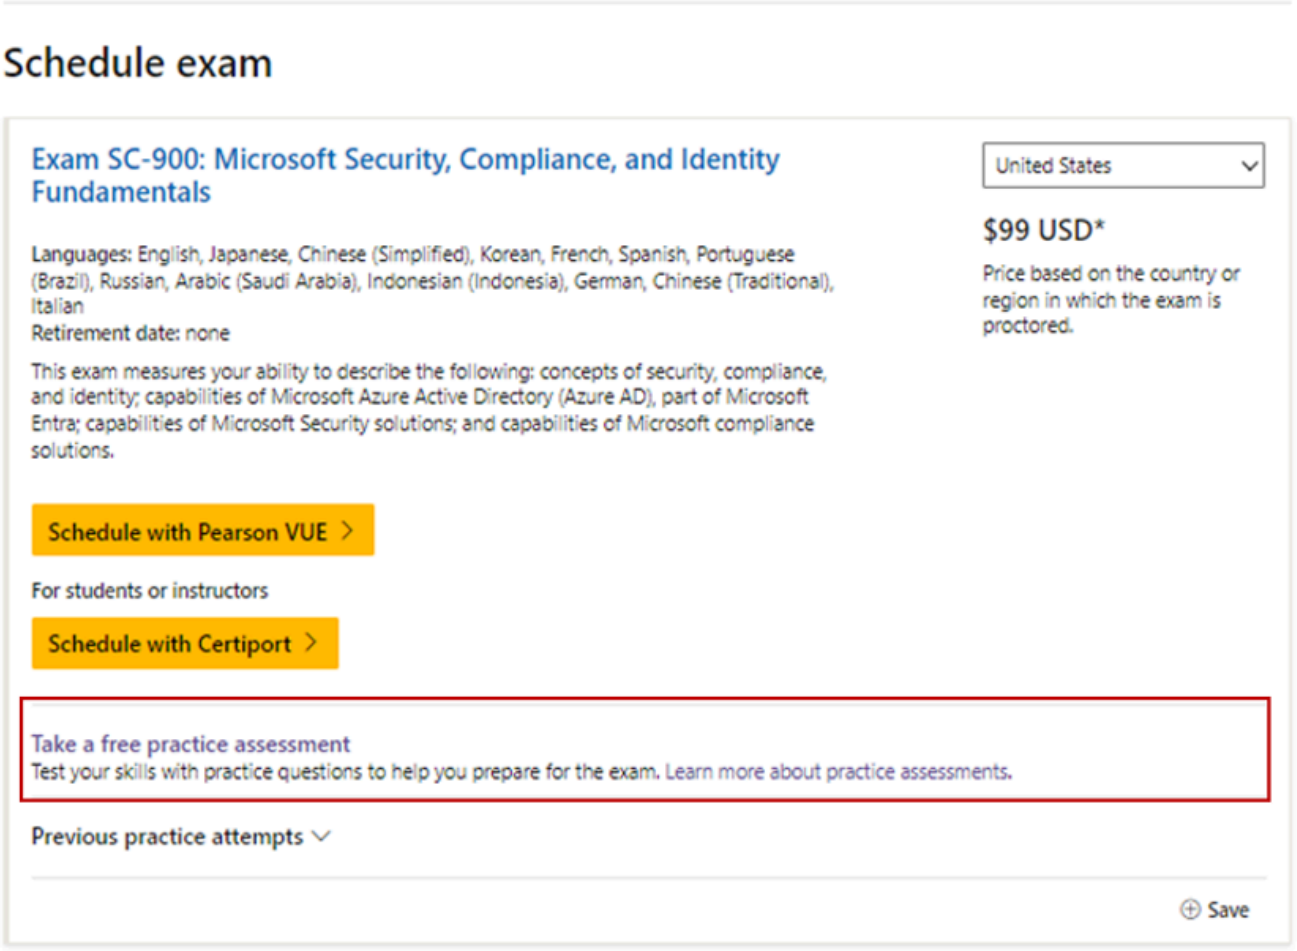
While not a guarantee, research shows that attaining a high score on a Practice Assessment increases the likelihood that someone will pass a Microsoft Certification exam. These Practice Assessments are intended to provide an overview of the style, wording, and difficulty of the questions that you are likely to experience on this exam. To help you better prepare, the score report provides the answer, a rationale, and a URL that will link you to additional information for every question.

Who can take a Practice Assessment?

Practice Assessments are available for free to every learner and can be taken as many times as you want. You will need to sign in to your Learn profile or create an account before taking the Practice Assessment.

Where can I find a Practice Assessment?

If the exam that you're interested in taking has a Practice Assessment (not all of them do), you will find the link to it on the exam details page for that specific exam in the "Schedule exam" section. (See image below)



I can't find a free Practice Assessment for the exam I want to take. Where is it?

Currently, not all Microsoft Certification exams have free Practice Assessments. However, some have practice tests available through MeasureUp. These are available for purchase. They can be found on the exam details page for that exam or here.

Are Practice Assessments available for all Microsoft Certifications?

No. Over the next few months, Microsoft will roll out free Practice Assessments for additional exams.

Are the Practice Assessments free?

Yes. Practice Assessments are free and available to all learners who wish to use them as an exam preparation resource for Microsoft Certifications.

Will Practice Assessments be available in multiple languages?

Yes. Practice Assessments will be available in multiple languages.

Can I still take the Practice Tests from MeasureUp?

Practice Tests from MeasureUp are still available and can be found here.

How is the multiple choice select n (e.g., choose two) question type scored?

To earn the point for this type of question, you must select all of the correct options without selecting any incorrect options. Note that this is different from how these question types are scored on Microsoft Certification exams.

How can I get help with issues or problems I have on Practice Assessments? How can I provide feedback?

Please use the Practice Assessment Feedback Form to report a technical issue. You can provide feedback on the overall experience by completing the Practice Assessment Survey.

Frequently asked questions about academic pricing

Are student discounts available for exams?

Visit: Student discounts.

Can I get a refund if I initially registered and paid for an exam without verifying an academic discount, but I'm verified now?

No. If you decide to register and pay for an exam before you have verified your student status, you must pay commercial pricing and will not receive a refund. You must ensure that you are verified before completing your registration and payment.

Does my academic verification expire?

Yes. Your academic verification is only valid for 12 months. After 12 months, you need to repeat the verification process.

I'm an educator. Can I still receive an academic discount (in applicable countries/regions) on my Microsoft Certification exam delivered in the commercial channel?

Yes. You need to follow the same process as a student. In other words, you must select "Student" as your job function in your Microsoft account profile, and you must verify your status through the same process as a student. For more information, visit: Student discounts.

Who do I contact for questions regarding the academic verification process for Microsoft Certification exams?

If you have general questions related to exam registration or questions specific to a new or pending verification request, please contact Credentials Support.

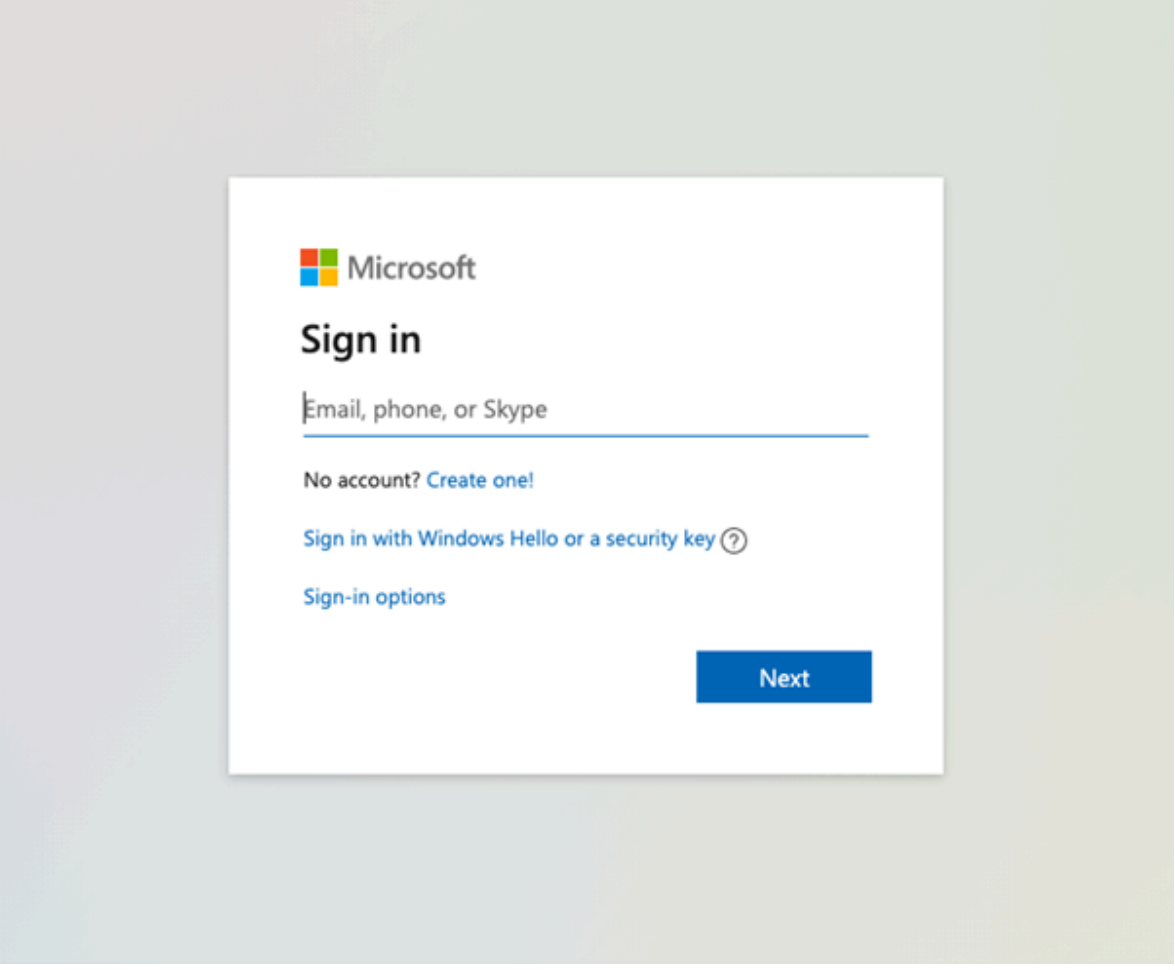
Vouchers and redeeming discounts

Article • 07/10/2024

How to redeem an employee or event attendee discount

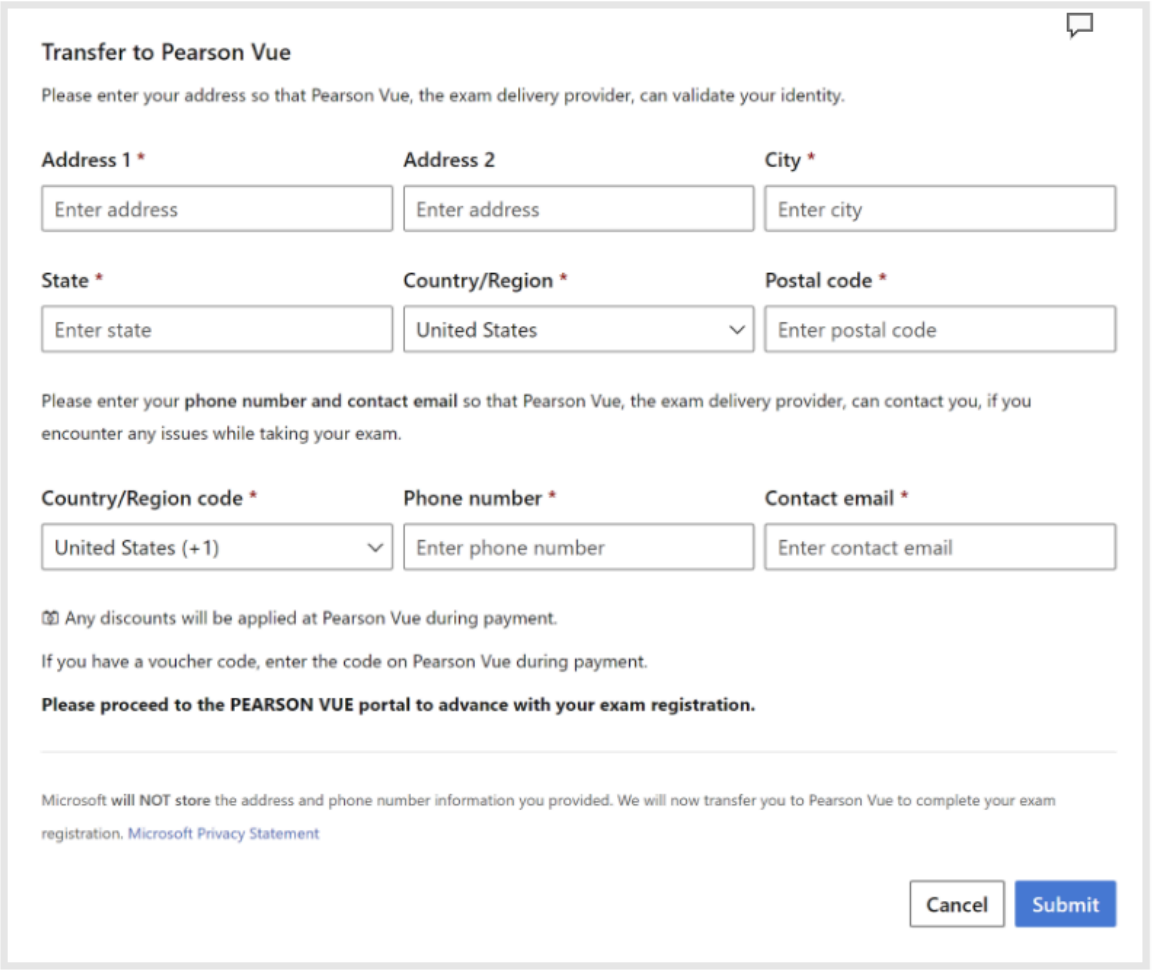
1. Begin the registration process by selecting the "Schedule exam" button from any exam or certifications detail page. For detailed instructions on how to register, visit: Register and schedule an exam.

2. Sign into your existing Microsoft Learn profile or create one using a Microsoft account.



3. When logged in, enter your address and contact information in the **Transfer to Pearson Vue** dialog box for Pearson Vue, the exam delivery provider.

   Any discounts will be applied during checkout. If you have a voucher code, you will enter it on Pearson Vue website during payment.



4. Select the "Submit" button to proceed to the Pearson Vue website to complete your exam registration

5. Complete the exam options, confirm your selections, and proceed to your Cart to checkout.

   If you are eligible for an exam discount, it will be applied during checkout.

How to redeem a voucher with Pearson VUE

To redeem a voucher, you will register and schedule your exam with Pearson VUE using the standard process. For detailed information about registering, visit: Register and schedule an exam.

On the screen where you enter payment and billing information, select “Add Voucher or Promo Code” and follow the on-screen instructions to redeem your voucher.

Microsoft at SXSW EDU Certification Exam Vouchers Terms and Conditions

Summarize this article for me

Thank you for visiting Microsoft at SXSW EDU and completing the skilling playlist on AI Skills Navigator. You have earned a voucher for a free Microsoft Certification exam!

Look for an email from 'MindHub Pro by Pearson VUE' that contains your voucher code and expiration date.

Use the voucher code to **schedule and take** your exam before the expiration date of **July 31, 2026**.

Terms and Conditions

These vouchers are governed by the following terms:

- Limit one voucher per person per fiscal year. In no event should distribution of more than one voucher to a single candidate happen within the same fiscal year.
- This exam offer redemption window starts March 19, 2026 and expires on July 31, 2026 inclusive of booking and taking the exam.
- Be aware that by allowing Microsoft to scan your badge, you will be contacted for the voucher giveaway.
- You must redeem the voucher code and take the exam prior to the Expiration Date.
- Voucher expiration extensions are not permitted.
- Each voucher code may be redeemed only once to take one Microsoft Certification exam.
- Voucher codes are program specific and, in some cases, exam specific and may not be used for any other offering.
- Voucher codes may not be redeemed for cash, credit, or refunds.
- Expired, stolen or lost voucher codes will not be replaced.
- Any sale or transfer of this voucher code is expressly prohibited and constitutes fraud.
- This voucher code is void if altered in any way.
- Voucher code may not be applied to exams that have already been taken.
- Microsoft, Pearson VUE, and the VUE test centers are not responsible for lost or stolen voucher codes.
- For instructions on registering and scheduling your exam, visit: aka.ms/SXSWEDU/ExamReg
- Voucher code must be provided when registering for the Microsoft Certification exam.
- Individuals that (i) fail to show up for their scheduled exam appointment, or (ii) cancel or reschedule their appointment to take an exam seventy-two hours or less from the

scheduled time may forfeit their voucher code (voucher code cannot be used again).

- Taxes, if any, are the sole responsibility of the recipient.
- This exam voucher is only applicable to attendees of SXSW EDU who participate in the AI Skills Navigator activation.
- You must be older than 18 years of age to participate. If Microsoft determines that you are not of the minimum age, you will not be entitled to a free Microsoft certification exam and Microsoft reserves the right to legal action against you.
- Void in Belarus, Cuba, Iran, North Korea, Russia, Syria, Region of Crimea, and where prohibited.
- For support issues, get help through aka.ms/SXSWEDU/CredentialsSupport. The support team will respond in three business days.
- If you experience issues redeeming your registration code, please email mindhubprohelp@pearson.com and their customer service staff will be happy to help you. They will respond to your email within 1 - 2 business days.

  Office Hours: Monday-Friday, 9:00 a.m.-5:00 p.m. CT; closed on U.S. holidays.

  Email: mindhubprohelp@pearson.com

Instructions for Redeeming Your Exam Voucher

To redeem your exam voucher online, please follow the steps below:

1. Go to the Microsoft Credentials page.
2. Select a Microsoft Certification.
3. On the certification page, scroll down to the “Schedule exam” button, making sure to choose to schedule through Pearson VUE.
4. Follow the Pearson VUE options and scheduling prompts. **You must schedule and take your exam prior to July 31, 2026, to use your voucher**. If an exam date beyond July 31, 2026, is selected, you will not be able to apply the voucher to the cost of the exam.
5. Proceed to check out and apply the voucher code provided to book with your 100% discount!

Exams must be **scheduled and taken** on or before **July 31, 2026**.

Microsoft Defender Skilling Challenge

Enter and complete the Microsoft Defender Skilling Challenge, then submit a sweepstakes entry form by **August 21st, 2026**, for a chance to receive a 50% discount Microsoft Certification voucher.

Steps to enter

1. Review the sweepstakes terms and conditions on this page.
2. Register for and complete the Defender Skilling Challenge prior to August 21, 2026.
3. Once you complete the challenge, submit an entry via the sweepstakes entry form before the sweepstakes period ends on August 21, 2026.
4. If you're selected as a winner of one of the 50% discount certification exam vouchers (500 available), you will be contacted by Pearson Vue via email with your voucher code, along with the steps on how to redeem.

The discount certification exam voucher is eligible for the exam below.

- SC-200 Security Operations Analyst
- SC-500 Cloud and AI Security Engineer

Sweepstakes terms and conditions

1. SPONSOR

These Official Rules ("Rules") govern the operation of the Microsoft Defender Skilling Challenge Sweepstakes ("Sweepstakes"). Microsoft Corporation, One Microsoft Way, Redmond, WA, 98052, USA, is the Sweepstakes sponsor ("Sponsor").

2. DEFINITIONS

In these Rules, "Microsoft", "we", "our", and "us" refer to Sponsor and "you" and "yourself" refers to a Sweepstakes participant, or the parent/legal guardian of any Sweepstakes entrant who has not reached the age of majority to contractually obligate themselves in their legal place of residence. By entering you (your parent/legal guardian if you are not the age of majority in your legal place of residence) agree to be bound by these Rules.

3. ENTRY PERIOD

The Sweepstakes starts at **6:00 AM (06:00) UTC on July 20, 2026**, and ends at **11:59 PM (23:59) UTC on August 21, 2026** ("Entry Period") and will consist of the following Prize Period:

Expand table

Prize Period	Start Date/Time	End Date/Time
1	August 24, 2026 at 12:00 AM UTC	August 31, 2026 at 11:59 PM UTC

Entries will be eligible for the Prize Period in which they are received. Entrants only need to enter once.

4. ELIGIBILITY

To enter, you must be 18 years of age or older. Employees and directors of Microsoft Corporation and its subsidiaries, affiliates, advertising agencies, and Sweepstakes Parties are not eligible. Void in Cuba, Iran, North Korea, Sudan, Syria, Region of Crimea, Russia, and where prohibited.

5. HOW TO ENTER - No Purchase Necessary

To enter, you must register for and complete the Microsoft Defender Skills Challenge and submit a sweepstakes entry form by August 21, 2026 at 11:59 PM UTC (23:59)c After registering and completing the challenge, you must visit the entry form URL to complete an official entry prior to the deadline. There is a limit of one (1) entry per person overall. Non-selected entries roll over to the next Prize Period drawing.

Skills Challenge

Entry form

6. WINNER SELECTION AND NOTIFICATION

Potential prize winners will be selected within eight (8) days following the Prize Period by Microsoft or their Agent in a random drawing from among all eligible entries:

Expand table

Prize Period	Number of Winners
1	500

Winner email addresses will be shared with Pearson Vue for voucher fulfillment. Vouchers are issued by MindHub Pro by Pearson VUE. Winners will receive an email from 'MindhubPro by Pearson VUE' with a digital code. Only three alternate winners will be selected; after which unclaimed prizes will remain unawarded.

7. PRIZES

Each winner will receive a 50% discount exam voucher (500 available). Approximate Retail Value (ARV) $0.00. Certification codes expire on **June 30, 2026**, so exam(s) must be booked and completed before this date

100% discount exam voucher is eligible for the following Microsoft Certification exam offered through Pearson Vue:

- SC-200: Security Operations Analyst
- SC-500: Cloud and AI Security Engineer

Discount voucher is NOT eligible for GitHub Certification exams. Total ARV of all prizes: $0.00. One (1) prize per person overall.

8. ODDS

The odds of winning are based on the number of eligible entries received.

9. GENERAL CONDITIONS AND RELEASE OF LIABILITY

To the extent allowed by law, by entering you agree to release and hold harmless Microsoft and its respective parents, partners, subsidiaries, affiliates, employees, and agents from any and all liability arising in connection with this Sweepstakes or any prize won. All local laws apply. The decisions of Microsoft are final and binding. Microsoft reserves the right to cancel, change, or suspend this Sweepstakes for any reason.

10. USE OF YOUR ENTRY

Personal data you provide while entering this Microsoft Defender Skilling Challenge Sweepstakes will be used by Microsoft and/or its agents and prize fulfillers acting on Microsoft's behalf only for the administration and operation of this Sweepstakes and in accordance with the Microsoft Privacy Statement.

11. GOVERNING LAW

This Sweepstakes will be governed by the laws of the State of Washington, and you consent to the exclusive jurisdiction and venue of the courts of the State of Washington for any disputes arising out of this Sweepstakes.

12. WINNERS LIST

Send an email to Microsoft Challenge Sweepstakes with the subject line “Microsoft Defender Challenge Sweepstakes winners” within 30 days of August 21, 2026 (by September 13, 2026), to receive a list of winners.

Microsoft Office Specialist Championship Certification Exam Voucher

Thank you for participating in the Microsoft Office Specialist Championship. You have earned a voucher for a free Microsoft Certification exam for Fundamental Certifications!

You should have received an email from the Certiport team sharing the voucher code and instructions to register for the exam. Use the voucher code to schedule and take your exam before the expiration date of December 31, 2026.

Terms and Conditions

These vouchers are governed by the following terms:

- Limit one voucher per person per fiscal year. In no event should distribution of more than one voucher to a single candidate happen within the same fiscal year.
- This exam offer redemption window starts the date you received the voucher, and expires on December 31, 2026, inclusive of booking and taking the exam.
- You must redeem the voucher code and take the exam prior to the expiration date.
- Voucher expiration extensions are not permitted.
- Each voucher code may be redeemed only once to take one Microsoft Fundamentals Certification.
- Voucher codes are program specific and, in some cases, exam specific and may not be used for any other offering.
- Vouchers codes may not be redeemed for cash, credit, or refunds.
- Expired, stolen or lost voucher codes will not be replaced.
- Any sale or transfer of this voucher code is expressly prohibited and constitutes fraud.
- This voucher code is void if altered in any way.
- Voucher code may not be applied to exams that have already been taken.
- Microsoft, Pearson VUE, and the VUE test centers are not responsible for lost or stolen voucher codes.
- For instructions on registering and scheduling your exam, visit: Register and schedule an exam.
- Voucher code must be provided when registering for the certification exam.
- Individuals that (i) fail to show up for their scheduled exam appointment, or (ii) cancel or reschedule their appointment to take an exam seventy-two hours or less from the

scheduled time may forfeit their voucher code (voucher code cannot be used again).

- Taxes, if any, are the sole responsibility of the recipient.
- This exam voucher is only applicable to attendees of the Microsoft Office Specialist Championship.
- You must be older than 18 years of age to participate. If Microsoft determines that you are not of the minimum age, you will not be entitled to a free Microsoft or GitHub Certification exam and Microsoft reserves the right to legal action against you.
- Void in Belarus, Cuba, Iran, North Korea, Russia, Syria, Region of Crimea, and where prohibited.

For support issues, get help through Microsoft Credentials support. The support team will respond in three business days.

Study guide for Exam AB-100: Agentic AI Business Solutions Architect

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.

Updates to the exam

Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 22, 2026

Audience profile

As a candidate for this exam, you're an accomplished solution architect with expertise in designing and delivering AI-driven business solutions that transform business processes and foster innovation. You're experienced in creating scalable, secure, and integrated solutions that use multiple Microsoft services to address complex organizational challenges.

Your competencies include:

- Expertise in architecting solutions that use AI, including generative AI and various Foundry Tools tailored to meet business objectives.
- The ability to design agentic-first solutions.
- Skills in designing multi-agent orchestrated solutions.
- Experience designing secure and scalable cross-platform AI solutions.
- Comprehensive knowledge of core Dynamics 365 products, Microsoft Power Platform, Microsoft Copilot Studio, Microsoft Foundry Tools, and Foundry Models.
- Proficiency in working with agents created by using Copilot Studio, AI prompts, Microsoft Foundry, and working knowledge of multiple language models to create intelligent solutions.
- Proficiency in adopting frameworks and delivering measurable outcomes aligned with enterprise success metrics and architecture patterns.
- Expertise in working with open standards and protocols, including Agent2Agent (A2A) and Model Context Protocol (MCP).
- Expertise in responsible AI practices, helping to ensure compliance and advocating for the Microsoft Responsible AI Standard.
- Strong leadership in orchestrating AI features in Microsoft business applications to optimize operations and unlock growth opportunities.

- Skills in securing AI models and data workflows, including detecting and resolving vulnerabilities, enforcing data residency and access controls, safeguarding model tuning, tracking changes, maintaining audit trails, and defending against prompt manipulation.
- Experience in monitoring agent performance and interpreting telemetry data to help ensure reliability, optimize behavior, and drive continuous improvement.
- Ability to conduct a return-on-investment (ROI) analysis of an AI-powered solution.

Your key responsibilities include:

- Envisioning and defining architecture strategies to integrate AI and agents into business solutions.
- Defining the roadmap for agentic-first business processes.
- Analyzing and interpreting business and technical requirements to architect comprehensive solutions.
- Designing and prototyping AI components and showcasing transformative capabilities.
- Guiding the end-to-end implementation of AI-centric solutions, helping to ensure security, scalability, and alignment with organizational goals.
- Promoting and championing the adoption of AI technologies in the development lifecycle and across business units.
- Creating a cohesive application lifecycle management (ALM) strategy for agentic-first solutions.
- Creating a cohesive environment strategy for AI-powered solutions, with consideration for third-party AI solutions.
- Guiding organizations on their way to becoming AI-forward companies.

As an AI-first solution architect, you lead the transformation of enterprise operations by envisioning and implementing AI-powered architecture. With a focus on making the most of the full spectrum of Microsoft AI apps and services, along with business application tools, you drive innovation and help to ensure the delivery of impactful AI-powered solutions.

Skills at a glance

- Plan AI-powered business solutions (25–30%)

- Design AI-powered business solutions (25–30%)
- Deploy AI-powered business solutions (40–45%)

Plan AI-powered business solutions (25–30%)

Analyze requirements for AI-powered business solutions

- Assess the use of agents in task automation, data analytics, and decision-making
- Review data for grounding, including accuracy, relevance, timeliness, cleanliness, and availability
- Organize business solution data to be available for other AI systems

Design overall AI strategy for business solutions

- Implement the AI adoption process from the Cloud Adoption Framework for Azure
- Design the strategy for building AI and agents in business solutions
- Design a multi-agent solution by using platforms such as Microsoft 365 Copilot, Copilot Studio, and Microsoft Foundry
- Develop the use cases for prebuilt agents in the solution
- Define the solution rules and constraints when building AI components with Copilot Studio, Microsoft Foundry and Foundry Tools
- Determine the use of generative AI and knowledge sources in agents built with Copilot Studio
- Determine when to build custom agents or extend Microsoft 365 Copilot
- Determine when custom AI models should be created
- Provide guidelines for creating a prompt library
- Develop the use cases for customized small language models for the solution
- Provide prompt engineering guidelines and techniques for AI-powered business solutions
- Include the elements of the Microsoft AI Center of Excellence
- Design AI solutions that use multiple Dynamics 365 apps

Evaluate the costs and benefits of an AI-powered business solution

- Select ROI criteria for AI-powered business solutions, including the total cost of ownership
- Create an ROI analysis for the proposed AI solution for a business process
- Analyze whether to build, buy, or extend AI components for business solutions
- Implement a model router to intelligently route requests to the most suitable model

Design AI-powered business solutions (25–30%)

Design AI and agents for business solutions

- Design business terms for Copilot in Dynamics 365 apps for customer experience and service
- Design customizations of Copilot in Dynamics 365 apps for customer experience and service
- Design connectors for Copilot in Dynamics 365 Sales
- Design agents for integration with Dynamics 365 Contact Center channels
- Design task agents
- Design autonomous agents
- Design prompt and response agents
- Propose Foundry Tools for a given requirement
- Propose code-first generative pages and the use of an agent feed for apps
- Design topics for Copilot Studio, including fallback
- Design data processing for AI models and grounding
- Design a business process to include AI components in a Power Apps canvas app
- Apply the Microsoft Power Platform Well-Architected Framework to intelligent application workloads
- Determine when to use standard natural language processing, conversational language understanding, or generative AI orchestration in Copilot Studio

- Design agents and agent flows with Copilot Studio
- Design prompt actions in Copilot Studio

Design extensibility of AI solutions

- Design AI solutions by using custom models in Microsoft Foundry
- Design agents in Microsoft 365 Copilot
- Design agent extensibility in Copilot Studio
- Design agent extensibility with Model Context Protocol in Copilot Studio
- Design agents to automate tasks in apps and websites by using Computer Use in Copilot Studio
- Design agent behaviors in Copilot Studio, including reasoning and voice mode
- Optimize solution design by using agents in Microsoft 365, including Teams and SharePoint

Orchestrate configuration for prebuilt agents and apps

- Orchestrate AI features in Dynamics 365 apps for finance and supply chain
- Orchestrate AI features in Dynamics 365 apps for customer experience and service
- Propose Microsoft 365 agents for business scenarios
- Orchestrate the configuration of Microsoft 365 Copilot for Sales and Microsoft 365 Copilot for Service
- Propose Microsoft Power Platform AI features, including AI hub
- Design interoperability of the finance and operations agent chats to use additional knowledge sources
- Recommend the process of adding knowledge sources to in-app help and guidance for Dynamics 365 Finance or Dynamics 365 Supply Chain Management apps

Deploy AI-powered business solutions (40–45%)

Analyze, monitor, and tune AI-powered business solutions

- Recommend the process and tools required for monitoring agents

- Analyze backlog and user feedback of AI and agent usage
- Apply AI-based tools to analyze and identify issues and perform tuning
- Monitor agent performance and metrics
- Interpret telemetry data for performance and model tuning

Manage the testing of AI-powered business solutions

- Recommend the process and metrics to test agents
- Create validation criteria of custom AI models
- Validate effective Copilot prompt best practices
- Design end-to-end test scenarios of AI solutions that use multiple Dynamics 365 apps
- Build the strategy for creating test cases by using Copilot

Design the ALM process for AI-powered business solutions

- Design the ALM process for data used in AI models and agents
- Design the ALM process for Copilot Studio agents, connectors, and actions
- Design the ALM process for Microsoft Foundry Agents service
- Design the ALM process for custom AI models
- Design the ALM process for AI in Dynamics 365 apps for finance and supply chain
- Design the ALM process for AI in Dynamics 365 apps for customer experience and service

Design responsible AI, security, governance, risk management, and compliance

- Design security for agents
- Design governance for agents
- Design model security
- Analyze solution and AI vulnerabilities and mitigations, including prompt manipulation
- Review solution for adherence to responsible AI principles

- Validate data residency and movement compliance
- Design access controls on grounding data and model tuning
- Design audit trails for changes to models and data

Study guide for Exam AB-410: Building Intelligent Applications

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.

About the exam

Languages

Some exams are localized into other languages. You can find these in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured

Audience profile

As a candidate for this Microsoft Certification, you're a professional who builds AI-powered solutions in Microsoft Power Platform by using Microsoft Copilot, natural language prompts, and low-code tools. You create apps, data models, and flows that connect to agents, AI models and prompts, and visualizations to enrich these experiences.

In this role, your responsibilities include:

- Developing Dataverse data models, model-driven apps, and canvas apps.
- Integrating agents and Copilot features into canvas apps, model-driven apps, and Power Pages sites.
- Creating cloud flows and business logic.

You collaborate with:

- Environment and security administrators for policies, roles, identity, and authentication.
- Governance teams on responsible AI principles, application lifecycle management (ALM), solutions, pipelines, and monitoring.
- Agent developers, solution architects, and other app builders for business solution building.
- Business stakeholders to gather requirements, iterate business solutions, and promote user adoption.

For this exam, you should have experience with:

- Using natural language to create solution assets.
- Dataverse modeling.
- Power Automate cloud flows.
- AI capabilities in Microsoft Power Platform.
- Power Apps development.

- Power Pages sites.

Prerequisites for the exam include:

- Familiarity with using Copilot in Power Apps, Copilot in Power Automate, Copilot in Power Pages, and Copilot in Dataverse.
- Awareness of creating agents with Microsoft Copilot Studio.
- Foundational knowledge of AI models and prompts in AI Hub.
- Ability to map business processes to flows, agents, or app capabilities.
- Ability to work with Dataverse as a core data platform.
- Familiarity with low-code automation, including Power Fx.
- Awareness of environment governance, roles, policies, and solution lifecycle steps.

Skills at a glance

- Create a foundation for intelligent applications (25–30%)
- Create intelligent applications (25–30%)
- Build business application logic and automation (40–45%)

Create a foundation for intelligent applications (25–30%)

Design Microsoft Power Platform solutions by using AI-enabled tools

- Analyze requirements to identify components and options for implementation
- Evaluate built-in agents to include in the business solution
- Recommend extensibility options
- Recommend environment types
- Apply a Microsoft Power Platform solution and ALM strategy

Build data models

- Create and edit tables in the data workspace

- Create and modify standard tables
- Configure table properties
- Create and modify columns
- Configure table relationships
- Configure prompt columns
- Configure row summaries
- Configure public views
- Configure main forms
- Configure security

Create intelligent applications (25–30%)

Create model-driven apps

- Create and configure forms for model-driven apps
- Create and configure views for model-driven apps
- Create generative pages by using natural language
- Compose a model-driven app
- Configure access to forms and views for model-driven apps
- Configure access to model-driven apps
- Create and configure model-driven app charts and dashboards

Create canvas apps

- Create a canvas app using data
- Design apps for accessibility, performance, responsiveness, and usability
- Automate business processes from canvas apps
- Create reuseable components, including named formulas, user-defined functions, and component libraries

- Manage variables and collections
- Implement error handling
- Test canvas apps, including using Monitor
- Create a Copilot Studio agent from a canvas app

Build business application logic and automation (40–45%)

Create cloud flows

- Recommend cloud flow triggers
- Evaluate and recommend connectors
- Manage approvals by using cloud flows
- Configure cloud flow actions
- Implement flow control with conditions and loops
- Test and troubleshoot cloud flows

Create prompts and models in AI Hub

- Build prompts from templates or from blank
- Consume a prompt in apps
- Consume a prompt in cloud flows
- Add knowledge to a prompt
- Customize prompt settings, including models
- Add inputs to a prompt
- Consume an AI model in apps
- Consume an AI model in cloud flows

Implement business and process logic

- Configure business rules

- Configure business process flows
- Configure calculated, rollup, and formula columns
- Evaluate use cases for business logic

Study resources

Study guide for Exam AB-620: Designing and Building Integrated AI Solutions in Copilot Studio

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.

About the exam

Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured

Audience profile

As a candidate for this Microsoft Certification, you're a professional developer or advanced builder who builds, extends, and integrates custom agents for enterprise-grade solutions. You typically work as an IT application developer, consultant, or independent software vendor (ISV) partner focused on creating scalable AI solutions for organizations or customers.

For this exam, you should be familiar with Power Fx, Microsoft Dataverse, Microsoft Power Platform environments and components, Microsoft 365 Copilot, Microsoft Foundry, and adaptive cards.

You need intermediate knowledge of generative AI concepts, including models, orchestration, retrieval-augmented generation (RAG), Model Context Protocol (MCP), Agent2Agent (A2A) protocol, and more. You should also have experience with prompt engineering and with REST APIs and integration patterns. Additionally, you need experience configuring agents with basic knowledge sources, instructions, tools, and topics in Microsoft Copilot Studio.

As a developer who works in Copilot Studio, you:

- Integrate agents with Microsoft Foundry.
- Integrate agents with Model Context Protocol (MCP) servers.
- Integrate agents with custom connectors.
- Integrate agents with APIs.
- Integrate agents with Microsoft Fabric.
- Automate tasks with computer use.
- Integrate agents with connectors.

You create:

- Multi-agent solutions.
- Agents with enterprise knowledge sources (such as ServiceNow, SAP, and others).
- Advanced agent topics and tools.
- Computer-using agents.
- Agents that perform advanced actions via APIs.

You collaborate with Microsoft 365 administrators, Microsoft Power Platform administrators, Microsoft Copilot administrators, Copilot Studio agent builders, Copilot Studio administrators, Foundry administrators, agentic AI business solutions architects, and Copilot Studio architects.

Skills at a glance

- Plan and configure agent solutions (30–35%)
- Integrate and extend agents in Copilot Studio (40–45%)
- Test and manage agents (20–25%)

Plan and configure agent solutions (30–35%)

Plan an agent solution

- Plan integration with enterprise systems
- Plan identity strategy
- Plan channels and deployment
- Plan responsible AI strategy
- Evaluate security and governance considerations
- Plan reuseable agent components
- Design agents for internal or external audiences

Create and monitor agent flows in Copilot Studio

- Create an agent flow

- Create a human-in-the-loop agent flow
- Configure actions and connectors
- Monitor agent flows
- Add input and output parameters
- Implement error handling in agent flows

Configure topics

- Add agent flows to a topic
- Configure agent response formatting
- Add tools to a topic
- Configure advanced agent responses with custom prompts
- Configure advanced agent responses with custom knowledge sources
- Configure advanced agent responses with API and Send HTTP requests
- Configure generative answers node
- Configure adaptive cards
- Manage variables

Integrate and extend agents in Copilot Studio (40–45%)

Connect to enterprise knowledge sources

- Connect to Copilot connectors
- Connect to Microsoft Power Platform connectors
- Connect to Azure AI Search

Add tools to agents

- Configure and monitor computer use for an agent
- Configure MCP tools

- Add a tool by using an existing custom connector
- Add REST APIs to an agent

Configure multi-agent collaboration from Copilot Studio

- Design multi-agent solutions in Copilot Studio
- Integrate a Foundry agent
- Integrate an existing agent in Copilot Studio
- Integrate a Fabric data agent
- Create a multi-agent solution by using A2A protocol

Integrate agents with Azure

- Configure generative answers by using Azure AI Search with Foundry
- Configure custom prompts to use the Foundry model catalog
- Monitor agents by using Application Insights

Test and manage agents (20–25%)

Evaluate agent performance

- Create a test set
- Choose an evaluation method
- Review test results

Implement application lifecycle management (ALM) for agents in Copilot Studio

- Create a solution
- Add existing agents to a solution
- Create and use environment variables
- Implement and extend Microsoft Power Platform Pipelines

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 22, 2026

Audience profile

As a candidate for this Microsoft Certification, you should have experience using generative AI–powered productivity tools, including Microsoft 365 Copilot and agents such as Researcher, and Analyst. You take advantage of AI to improve daily work, drive business outcomes, and make informed decisions in business contexts—without building AI apps or writing code.

You should be familiar with some of the primary elements of generative AI, such as prompts, agents, notebooks, and pages. You should understand how these elements are used to drive more efficient business outcomes.

You should have a basic understanding of Microsoft 365 and should be comfortable navigating core apps, such as Outlook, Word, Microsoft Teams, PowerPoint, and Excel. You should also be familiar with common business processes, including drafting emails, creating presentations, generating images, and managing documents.

Skills at a glance

- Understand generative AI fundamentals (25–30%)
- Manage prompts and conversations by using AI (35–40%)
- Draft and analyze business content by using AI (25–30%)

Understand generative AI fundamentals (25–30%)

Understand generative AI capabilities across Microsoft 365 experiences

- Understand how Copilot works to keep your organization’s information private and secure
- Understand how the context, like your work files, web data, or the app you’re using, can affect Copilot responses
- Understand the difference between a chat experience and an agent experience
- Understand the use case for creating your own agent

- Understand the differences in features and capabilities of the Copilot experience in various Microsoft 365 apps

Identify responsible AI and data protection practices

- Identify common risks, including fabrications, prompt injection, and over-reliance
- Select verification steps appropriate to the task, including citation checks and human review
- Recognize and mitigate risks to sensitive data
- Understand how data protection restricts prompt results

Manage prompts and conversations by using AI (35–40%)

Create and manage prompts in Microsoft 365 Copilot

- Understand how to create an effective prompt
- Select appropriate resources to reference in a prompt
- Save a prompt
- Schedule a prompt
- Share a prompt

Manage conversations in Microsoft 365 Copilot

- Understand how to find previous conversations
- Delete a chat
- Rename a chat
- Add a conversation to a notebook

Create and manage Microsoft 365 Copilot agents

- Understand when to use Agent Store versus creating a new agent
- Create an agent by using a template
- Configure an agent that has knowledge

- Configure agent settings such as instructions, capabilities and suggested prompts
- Share an agent with team members

Draft and analyze business content by using AI (25–30%)

Draft business documents and communications

- Create a new document from a prompt
- Generate a document from an existing document
- Generate a management summary based on a document
- Move data and insights between Microsoft 365 apps

Manage meetings and collaboration

- Describe how to use Microsoft 365 Copilot for meetings
- Describe how to use Copilot Pages for collaboration
- Describe how Copilot uses memory and instructions

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 22, 2026

Audience profile

As a candidate for this Microsoft Certification, you should understand how to recognize opportunities for AI transformation, identify the right AI tools and resources, plan for AI adoption, optimize business processes, and drive innovation by using Microsoft 365 Copilot and Foundry Tools.

This Certification is designed for business decision-makers at all levels who are responsible for guiding transformation and innovation within their teams or organizations. In this role, you're expected to demonstrate AI fluency, strategic vision, and the ability to lead AI adoption across teams and functions but are not expected to write any code.

As a candidate for this Certification, you should be able to evaluate AI opportunities, champion responsible AI practices, and align AI investments with business goals. You need experience leading adoption or change management in a business context. You must also be familiar with Microsoft 365 services, Microsoft Foundry, and general AI capabilities.

Skills at a glance

- Identify the business value of generative AI solutions (35–40%)
- Identify benefits, capabilities, and opportunities for Microsoft's AI apps and services (35–40%)
- Identify an implementation and adoption strategy for Microsoft's AI apps and services (20–25%)

Identify the business value of generative AI solutions (35–40%)

Identify the foundational concepts of generative AI

- Describe the differences between generative AI and other types of AI
- Select a generative AI solution to meet a business need
- Describe the differences between AI models, including fine-tuned and pretrained models

- Explain the cost drivers in generative AI usage, including tokens and return-on-investment (ROI) considerations
- Identify the challenges of using generative AI solutions, including fabrications, reliability, and bias
- Identify when generative AI solutions can provide business value, including scalability and automation

Identify benefits and capabilities of generative AI solutions

- Describe the impact of prompt engineering
- Understand techniques of prompt engineering
- Identify business requirements for grounding solutions
- Understand how retrieval-augmented generation (RAG) is used for AI solutions
- Understand the impact of data on AI solutions, including data type, data quality, and representative datasets
- Describe the importance of secure AI
- Identify scenarios when machine learning adds value
- Describe the lifecycle of a machine learning solution
- Identify security considerations for AI systems, including application security, data security, and authentication requirements

Identify benefits, capabilities, and opportunities for Microsoft's AI apps and services (35–40%)

Identify benefits and capabilities of Microsoft 365 Copilot and Microsoft Copilot

- Map business processes and use cases to Copilot
- Understand differences in capabilities between versions of Copilot
- Understand capabilities of Microsoft 365 Copilot Chat web and mobile experiences
- Understand capabilities of the Copilot experience in various Microsoft 365 apps

- Understand capabilities of Microsoft Copilot Studio
- Understand capabilities of Microsoft Graph
- Identify benefits and capabilities of an integrated Microsoft AI solution, including risk mitigation and safety benefits
- Map business processes and use cases to Microsoft's AI apps and services
- Identify when to use Researcher or Analyst in Copilot
- Identify when to build, buy, or extend, including the Microsoft 365 Copilot extensibility framework

Identify benefits and capabilities of Foundry Tools

- Map business processes and use cases to Foundry Tools
- Identify capabilities of Foundry Tools, including Azure Vision in Foundry Tools, Azure AI Search, and Microsoft Foundry
- Match an AI model to a business need
- Identify the benefits of Microsoft Foundry and Foundry Tools, including scalability and security

Identify an implementation and adoption strategy for Microsoft's AI apps and services (20–25%)

Align an AI strategy with Microsoft responsible AI policies

- Explain the importance of responsible AI
- Establish governance principles for AI use
- Establish an AI council to guide strategy, oversight, and cross-functional alignment
- Ensure that AI solutions meet responsible AI standards, including fairness, reliability, safety, privacy, security, inclusiveness, transparency, and accountability

Plan for AI adoption across the organization

- Establish an adoption team

- Identify common barriers to adoption
- Establish an AI champions program
- Understand potential impacts to data, security, privacy, and cost
- Understand Copilot license types, including pay-as-you go, monthly, and included with Microsoft 365 subscription
- Understand Foundry Tools subscription models, including pay-as-you-go and commitment tiers

Study guide for Exam AB-900: Microsoft 365 Copilot and Agent Administration Fundamentals

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.

Updates to the exam

Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 22, 2026

Audience profile

As a candidate for this Microsoft Certification, you should be familiar with Microsoft 365, including core services, security, identity and access, data protection, and governance, along with Microsoft 365 Copilot and agents.

Additionally, you should be familiar with the admin centers used to access Microsoft 365 workloads, such as Exchange Online, SharePoint in Microsoft 365, Microsoft Teams, Microsoft Entra, and Microsoft Purview. You need to have experience with AI-driven productivity tools and modern IT management practices.

You must be able to identify the roles of the core features and objects available in Microsoft 365, such as users, groups, teams, sites, and libraries. Plus, you should understand the core security features of Microsoft 365, such as authentication methods, conditional access policies, and single sign-on (SSO).

Skills at a glance

- Identify the core features and objects of Microsoft 365 services (30–35%)
- Understand data protection and governance tasks for Microsoft 365 and Copilot (35–40%)
- Perform basic administrative tasks for Copilot and agents (25–30%)

Identify the core features and objects of Microsoft 365 services (30–35%)

Identify the core objects of Microsoft 365 services

- Explain how license types assigned to users and groups affect access to Microsoft 365 features
- Explore the organization configurations by using the Microsoft 365 admin center (domain names and org settings)

- Identify the appropriate objects to configure by using the Exchange admin center (mailboxes and distribution groups)
- Identify the appropriate objects to configure by using the SharePoint admin center (sites, libraries, and folders)
- Identify the appropriate roles and permissions for sites in SharePoint in Microsoft 365
- Identify the appropriate objects to configure by using the Teams admin center (teams, channels, and policies)

Understand the Microsoft 365 security principles

- Explain the core Zero Trust principles
- Understand authorization
- Understand authentication methods
- Understand threat protection and intelligence
- Understand features and capabilities of Microsoft Defender XDR

Identify the core security features of Microsoft 365 services

- Understand features and capabilities of Microsoft Entra ID
- Understand conditional access policies
- Understand the purpose and benefits of SSO
- Identify the appropriate security object to use in an organization (users and groups)
- Identify the appropriate tools to troubleshoot common sign-in issues (multifactor authentication [MFA], conditional access, and risky sign-ins)
- Interpret Identity Secure Score in Microsoft Entra ID
- Use the appropriate tools to review audit logs for user and admin activity
- Identify the role of Privileged Identity Management (PIM) in an organization
- Understand App registrations and Enterprise apps

Understand data protection and governance tasks for Microsoft 365 and Copilot (35–40%)

Understand Microsoft Purview

- Understand features and capabilities of Microsoft Purview Information Protection, Microsoft Purview Data Loss Prevention (DLP), Microsoft Purview Insider Risk Management, Microsoft Purview Communication Compliance, Microsoft Purview Data Security Posture Management (DSPM) for AI, and Microsoft Purview Data Lifecycle Management
- Identify the use cases for sensitivity labels in Microsoft Purview
- Understand data classification in Microsoft Purview
- Understand retention

Understand data security implications of Copilot

- Understand how Copilot accesses data
- Understand how Microsoft Graph influences Copilot responses
- Understand how Copilot uses permissions and other controls in Microsoft 365, Microsoft Purview, and Microsoft Defender to protect against risks
- Understand responsible AI principles

Identify data protection and governance risks for Microsoft 365 and Copilot

- Identify compliance risks and recommendations by using Microsoft Purview Compliance Manager
- Identify sensitive information by using Microsoft Purview Data Explorer
- Identify risks by using Insider Risk Management
- Identify and respond to alerts generated by Microsoft Purview DLP
- Identify policy violations generated by Communication Compliance
- Identify user activities reported by Microsoft Purview activity explorer
- Discover and manage AI activity by using DSPM for AI

- Search for files and emails by using Content search in Microsoft Purview eDiscovery

Identify and monitor oversharing in SharePoint in Microsoft 365

- Identify the tools to troubleshoot oversharing in an organization
- Run a data access governance report in SharePoint
- Understand features and capabilities of SharePoint Advanced Management, including restricted access control

Perform basic administrative tasks for Copilot and agents (25–30%)

Understand features and capabilities of Copilot and agents

- Compare the built-in capabilities of Copilot and agents
- Compare Copilot monthly license model to pay-as-you-go, including SharePoint
- Identify which Copilot features can be enabled or disabled
- Identify use cases for Researcher
- Identify use cases for Analyst
- Identify use cases for custom agents

Perform basic administrative tasks for Copilot

- Assign Copilot licenses
- Monitor and manage Copilot pay-as-you-go billing policies
- Monitor Copilot usage and adoption, including Copilot Analytics and the Microsoft 365 admin center
- Manage prompts, including saving, sharing, scheduling, and deleting

Perform basic administrative tasks for agents

- Identify how to configure user access to agents
- Create an agent

- Understand approval process for agents
- Monitor agents, including usage, operational insights, and agent lifecycle, by working with the Microsoft 365 admin center and the Microsoft Power Platform admin center

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English

version is updated. While Microsoft makes every effort to update localized exams as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of December 23, 2025

Audience profile

As a Microsoft Azure AI engineer, you build, manage, and deploy AI solutions that leverage Azure AI.

Your responsibilities include participating in all phases of AI solutions development, including:

- Requirements definition and design
- Development
- Deployment
- Integration
- Maintenance
- Performance tuning
- Monitoring

You work with solution architects to translate their vision. You also work with data scientists, data engineers, Internet of Things (IoT) specialists, infrastructure administrators, and other software developers to:

- Build complete and secure end-to-end AI solutions.
- Integrate AI capabilities in other applications and solutions.

As an Azure AI engineer, you have experience developing solutions that use languages such as:

- Python
- C#

You should be able to use Representational State Transfer (REST) APIs and SDKs to build secure image processing, video processing, natural language processing, knowledge mining, and generative AI solutions on Azure. You should:

- Understand the components that make up the Azure AI portfolio and the available data storage options.
- Be able to apply responsible AI principles.

Skills at a glance

- Plan and manage an Azure AI solution (20–25%)
- Implement generative AI solutions (15–20%)
- Implement an agentic solution (5–10%)
- Implement computer vision solutions (10–15%)
- Implement natural language processing solutions (15–20%)
- Implement knowledge mining and information extraction solutions (15–20%)

Plan and manage an Azure AI solution (20-25%)

Select the appropriate Microsoft Foundry Services

- Select the appropriate service for a generative AI solution
- Select the appropriate service for a computer vision solution
- Select the appropriate service for a natural language processing solution
- Select the appropriate service for a speech solution
- Select the appropriate service for an information extraction solution

- Select the appropriate service for a knowledge mining solution

Plan, create and deploy a Microsoft Foundry Service

- Plan for a solution that meets Responsible AI principles
- Create an Azure AI resource
- Choose the appropriate AI models for your solution
- Deploy AI models using the appropriate deployment options
- Install and utilize the appropriate SDKs and APIs
- Determine a default endpoint for a service
- Integrate Microsoft Foundry Services into a continuous integration and continuous delivery (CI/CD) pipeline
- Plan and implement a container deployment

Manage, monitor, and secure a Microsoft Foundry Service

- Monitor an Azure AI resource
- Manage costs for Microsoft Foundry Services
- Manage and protect account keys
- Manage authentication for a Microsoft Foundry Service resource

Implement AI solutions responsibly

- Implement content moderation solutions
- Configure responsible AI insights, including content safety
- Implement responsible AI, including content filters and blocklists
- Prevent harmful behavior, including prompt shields and harm detection
- Design a responsible AI governance framework

Implement generative AI solutions (15–20%)

Build generative AI solutions with Microsoft Foundry

- Plan and prepare for a generative AI solution
- Deploy a hub, project, and necessary resources with Microsoft Foundry
- Deploy the appropriate generative AI model for your use case
- Implement a prompt flow solution
- Implement a RAG pattern by grounding a model in your data
- Evaluate models and flows
- Integrate your project into an application with Microsoft Foundry SDK
- Utilize prompt templates in your generative AI solution

Use Azure OpenAI in Foundry Models to generate content

- Provision an Azure OpenAI in Foundry Models resource
- Select and deploy an Azure OpenAI model
- Submit prompts to generate code and natural language responses
- Use the DALL-E model to generate images
- Integrate Azure OpenAI into your own application
- Use large multimodal models in Azure OpenAI

Optimize and operationalize a generative AI solution

- Configure parameters to control generative behavior
- Configure model monitoring and diagnostic settings, including performance and resource consumption
- Optimize and manage resources for deployment, including scalability and foundational model updates
- Enable tracing and collect feedback
- Implement model reflection
- Deploy containers for use on local and edge devices

- Implement orchestration of multiple generative AI models
- Apply prompt engineering techniques to improve responses
- Fine-tune a generative model

Implement an agentic solution (5-10%)

Create custom agents

- Understand the role and use cases of an agent
- Configure the necessary resources to build an agent
- Create an agent with the Microsoft Foundry Agent Service
- Implement complex agents with Microsoft Agent Framework
- Implement complex workflows including orchestration for a multi-agent solution, multiple users, and autonomous capabilities
- Test, optimize and deploy an agent

Implement computer vision solutions (10-15%)

Analyze images

- Select visual features to meet image processing requirements
- Detect objects in images and generate image tags
- Include image analysis features in an image processing request
- Interpret image processing responses
- Extract text from images using Azure Vision in Foundry Tools
- Convert handwritten text using Azure Vision in Foundry Tools

Implement custom vision models

- Choose between image classification and object detection models
- Label images

- Train a custom image model, including image classification and object detection
- Evaluate custom vision model metrics
- Publish a custom vision model
- Consume a custom vision model
- Build a custom vision model code first

Analyze videos

- Use Azure AI Video Indexer to extract insights from a video or live stream
- Use Azure Vision in Foundry Tools Spatial Analysis to detect presence and movement of people in video

Implement natural language processing solutions (15–20%)

Analyze and translate text

- Extract key phrases and entities
- Determine sentiment of text
- Detect the language used in text
- Detect personally identifiable information (PII) in text
- Translate text and documents by using the Azure Translator in Foundry Tools service

Process and translate speech

- Integrate generative AI speaking capabilities in an application
- Implement text-to-speech and speech-to-text using Azure Speech in Foundry Tools
- Improve text-to-speech by using Speech Synthesis Markup Language (SSML)
- Implement custom speech solutions with Azure Speech in Foundry Tools
- Implement intent and keyword recognition with Azure Speech in Foundry Tools
- Translate speech-to-speech and speech-to-text by using the Azure Speech in Foundry Tools service

Implement custom language models

- Create intents, entities, and add utterances
- Train, evaluate, deploy, and test a language understanding model
- Optimize, backup, and recover language understanding model
- Consume a language model from a client application
- Create a custom question answering project
- Add question-and-answer pairs and import sources for question answering
- Train, test, and publish a knowledge base
- Create a multi-turn conversation
- Add alternate phrasing and chit-chat to a knowledge base
- Export a knowledge base
- Create a multi-language question answering solution
- Implement custom translation, including training, improving, and publishing a custom model

Implement knowledge mining and information extraction solutions (15–20%)

Implement an Azure AI Search solution

- Provision an Azure AI Search resource, create an index, and define a skillset
- Create data sources and indexers
- Implement custom skills and include them in a skillset
- Create and run an indexer
- Query an index, including syntax, sorting, filtering, and wildcards
- Manage Knowledge Store projections, including file, object, and table projections
- Implement semantic and vector store solutions

Implement an Azure Document Intelligence in Foundry Tools solution

- Provision a Document Intelligence resource
- Use prebuilt models to extract data from documents
- Implement a custom document intelligence model
- Train, test, and publish a custom document intelligence model
- Create a composed document intelligence model

Extract information with Azure Content Understanding in Foundry Tools

- Create an OCR pipeline to extract text from images and documents
- Summarize, classify, and detect attributes of documents
- Extract entities, tables, and images from documents
- Process and ingest documents, images, videos, and audio with Azure Content Understanding in Foundry Tools

Skills measured as of April 16, 2026

Audience profile

As a candidate for this Microsoft Certification, you’re an Azure AI engineer who builds, manages, and deploys agents and AI solutions that take advantage of Microsoft Foundry.

For this exam, you should have experience developing apps by using Python, and you need to be familiar with the capabilities of general AI, generative AI, and Azure services.

Your responsibilities include:

- Planning and managing Azure AI solutions.
- Implementing generative AI and agentic solutions.
- Implementing computer vision solutions.
- Implementing text analysis solutions.
- Implementing information extraction solutions.

In this role, you collaborate with business stakeholders, solution architects, data scientists, DevOps engineers, and cloud security engineers to design, implement, and maintain AI solutions.

Skills at a glance

- Plan and manage an Azure AI solution (25–30%)
- Implement generative AI and agentic solutions (30–35%)
- Implement computer vision solutions (10–15%)
- Implement text analysis solutions (10–15%)
- Implement information extraction solutions (10–15%)

Plan and manage an Azure AI solution (25–30%)

Choose the appropriate Foundry services for generative AI and agents

- Choose an appropriate model for each task, including large language models (LLMs), small language models, multimodal models, and Foundry Tools
- Choose the appropriate Foundry services for generative tasks, grounding, vector search, agent workflows, or multimodal processing
- Choose an appropriate method for retrieval and indexing
- Choose appropriate memory, tool, and knowledge integration services for agent solutions

Set up AI solutions in Foundry

- Design Azure infrastructure for AI apps and agent-based solutions
- Choose appropriate deployment options
- Configure model and agent deployments
- Integrate Foundry projects with continuous integration and continuous deployment (CI/CD) pipelines

Manage, monitor, and secure AI systems

- Manage quotas, scaling, rate limits, and cost footprints for model and agent workloads
- Monitor model performance, drift, safety events, and grounding quality
- Monitor data ingestion quality, search index health, and relevance performance

- Configure security, including managed identity, private networking, keyless credentials, and role policies

Implement responsible AI across generative AI and agentic systems

- Configure safety filters, guardrails, risk detection, and content moderation
- Apply responsible AI instrumentation, including evaluators, safety evaluations, and explanation tooling
- Implement auditing through trace logging, provenance metadata, and approval workflows
- Govern agent behavior with oversight modes, constraints, and tool-access controls

Implement generative AI and agentic solutions (30–35%)

Build generative applications by using Foundry

- Deploy and consume LLMs, small models, code models, and multimodal models
- Implement retrieval-augmented generation (RAG) in an application
- Design workflows, tool-augmented flows, and multistep reasoning pipelines
- Evaluate models and apps, including detecting fabrications, relevance, quality, and safety
- Integrate generative workflows into applications by using Foundry SDKs and connectors
- Configure an application to connect to a Foundry project

Build agents by using Foundry

- Define agent roles, goals, conversation-tracking approach, and tool schemas
- Build agents that integrate retrieval, function-calling, and conversation memory
- Integrate agent tools, including APIs, knowledge stores, search, content understanding, and custom functions
- Implement orchestrated multi-agent solutions
- Build autonomous or semiautonomous workflows with safeguards and approval flow controls

- Integrate monitoring into deployed agents, evaluate agent behavior, and perform error analysis

Optimize and operationalize generative AI systems

- Tune generation behavior, such as prompt engineering and adjusting model parameters
- Implement model reflection, chain-of-thought evaluations, and self-critique loops
- Set up observability by implementing tracing, token analytics, safety signals, and latency breakdowns
- Orchestrate multiple models, flows, or hybrid LLM and rules engines

Implement computer vision solutions (10–15%)

Design and implement image- and video-generation solutions

- Implement a solution that generates images from text prompts and reference media
- Implement a solution that generates videos from text prompts and reference media
- Configure image-editing workflows, including inpainting, mask-based edits, and prompt-driven modifications
- Implement workflows to edit generated videos
- Select and apply appropriate generation and editing controls provided by the platform

Design and implement multimodal understanding workflows

- Build a solution that analyzes visual context by using multimodal models
- Configure apps to produce concise or detailed captions for single or multiple images
- Implement a solution that enables question-answering grounded in visual evidence
- Configure generation of alt-text and extended image descriptions aligned to accessibility guidelines
- Implement visual understanding by configuring Azure Content Understanding in Foundry Tools to extract visual characteristics
- Implement video analysis workflows to process and interpret video segments

- Configure single-task and pro-mode Content Understanding pipelines
- Implement solutions that identify objects, components, or regions within images or video

Implement responsible AI for multimodal content

- Implement filters to classify unsafe or disallowed visual content
- Detect and mitigate indirect prompt injection by using embedded text in images
- Enforce visual policy rules, such as applying watermarks, flagging prohibited symbols, upholding brand usage requirements, and detecting potentially inappropriate content

Implement text analysis solutions (10–15%)

Apply language model text analysis

- Implement solutions to extract entities, topics, summaries, and structured JSON outputs by using generative prompting and Foundry Tools
- Configure detection of sentiment, tone, safety issues, and sensitive content
- Build solutions that translate text by using Azure Translator in Foundry Tools or LLM-powered translation flows
- Customize language model outputs for domain tasks, such as compliance summarization and domain extraction

Implement speech solutions

- Implement workflows to convert speech to text and text to speech for agentic interactions
- Integrate speech as an agent modality, including custom speech models
- Enable multimodal reasoning from audio inputs
- Translate speech into other languages by using language models and Foundry Tools

Implement information extraction solutions (10–15%)

Build retrieval and grounding pipelines

- Ingest and index content, such as documents, images, audio, and video

- Configure semantic search, hybrid search, and vector search for grounding
- Implement enrichment by using custom or built-in skills for text, images, and layout
- Configure RAG ingestion flow, including documents and using optical character recognition (OCR)
- Connect retrieval pipelines directly to workflows and agent tools

Extract content from documents

- Extract information by using multimodal pipelines that combine OCR, layout analysis, and field extraction
- Produce clean, grounded representations to use with agents and RAG by using Content Understanding
- Implement analyzers for generating structured or markdown outputs for downstream reasoning by using Content Understanding

Study resources

Study guide for Exam AI-300: Operationalizing Machine Learning and Generative AI Solutions

Summarize this article for me

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.

About the exam

Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured

Audience profile

As a candidate for this Microsoft Certification, you should have subject matter expertise in setting up infrastructure for machine learning operations (MLOps) and generative AI operations (GenAIOps) solutions on Azure, together referred to as *AI operations* (AIOps). You need experience training, optimizing, deploying, and maintaining traditional machine learning models by using Azure Machine Learning, in addition to experience deploying, evaluating, monitoring, and optimizing generative AI applications and agents by using Microsoft Foundry.

You should have a data science background with experience in Python programming and an entry-level understanding of DevOps practices, including using tools like GitHub Actions and working with command-line interfaces (CLIs).

Additionally, you need knowledge and experience in MLOps by using:

- Machine Learning.
- Foundry.
- GitHub Actions.
- Infrastructure as code (IaC) practices with Bicep and Azure CLI.

Your responsibilities for this role include:

- Designing and implementing MLOps infrastructure.
- Implementing machine learning model lifecycle and operations.
- Designing and implementing GenAIOps infrastructure.
- Implementing generative AI quality assurance and observability.
- Optimizing generative AI systems and model performance.

You work with data scientists, DevOps teams, and stakeholders to deliver scalable AI solutions with comprehensive automation and monitoring.

Skills at a glance

- Design and implement an MLOps infrastructure (15–20%)
- Implement machine learning model lifecycle and operations (25–30%)
- Design and implement a GenAIOps infrastructure (20–25%)
- Implement generative AI quality assurance and observability (10–15%)
- Optimize generative AI systems and model performance (10–15%)

Design and implement an MLOps infrastructure (15–20%)

Create and manage resources in a Machine Learning workspace

- Create and manage a workspace
- Create and manage datastores
- Create and manage compute targets
- Configure identity and access management for workspaces

Create and manage assets in a Machine Learning workspace

- Create and manage data assets
- Create and manage environments
- Create and manage components
- Share assets across workspaces by using registries

Implement IaC for Machine Learning

- Configure GitHub integration with Machine Learning to enable secure access
- Deploy Machine Learning workspaces and resources by using Bicep and Azure CLI
- Automate resource provisioning by using GitHub Actions workflows

- Restrict network access to Machine Learning workspaces
- Manage source control for machine learning projects by using Git

Implement machine learning model lifecycle and operations (25–30%)

Orchestrate model training

- Configure experiment tracking with MLflow
- Use automated machine learning to explore optimal models
- Use notebooks for experimentation and exploration
- Automate hyperparameter tuning
- Run model training scripts
- Manage distributed training for large and deep learning models
- Implement training pipelines
- Compare model performance across jobs

Implement model registration and versioning

- Package a feature retrieval specification with the model artifact
- Register an MLflow model
- Evaluate a model by using responsible AI principles
- Manage model lifecycle, including archiving models

Deploy machine learning models for production environments

- Deploy models as real-time or batch endpoints with managed inference options
- Test and troubleshoot model endpoints
- Implement progressive rollout and safe rollback strategies

Monitor and maintain machine learning models in production

- Detect and analyze data drift
- Monitor performance metrics of models deployed to production
- Configure retraining or alert triggers when thresholds are exceeded

Design and implement a GenAIOps infrastructure (20–25%)

Implement Foundry environments and platform configuration

- Create and configure Foundry resources and project environments
- Configure identity and access management with managed identities and role-based access control (RBAC)
- Implement network security and private networking configurations
- Deploy infrastructure using Bicep templates and Azure CLI

Deploy and manage foundation models for production workloads

- Deploy foundation models by using serverless API endpoints and managed compute options
- Select appropriate models for specific use cases
- Implement model versioning and production deployment strategies
- Configure provisioned throughput units for high-volume workloads

Implement prompt versioning and management with source control

- Design and develop prompts
- Create prompt variants and compare performance across different prompts
- Implement version control for prompts by using Git repositories

Implement generative AI quality assurance and observability (10–15%)

Configure evaluation and validation for generative AI applications and agents

- Create test datasets and data mapping for comprehensive model evaluation
- Implement AI quality metrics, including groundedness, relevance, coherence, and fluency
- Configure risk and safety evaluations for harmful content detection
- Set up automated evaluation workflows by using built-in and custom evaluation metrics

Implement observability for generative AI applications and agents

- Examine continuous monitoring in Foundry
- Monitor performance metrics, including latency, throughput, and response times
- Track and optimize cost metrics, including token consumption and resource usage
- Configure detailed logging, tracing, and debugging capabilities for production troubleshooting

Optimize generative AI systems and model performance (10–15%)

Optimize retrieval-augmented generation (RAG) performance and accuracy

- Optimize retrieval performance by tuning similarity thresholds, chunk sizes, and retrieval strategies
- Select and fine-tune embedding models for domain-specific use cases and accuracy improvements
- Implement and optimize hybrid search approaches combining semantic and keyword-based retrieval
- Evaluate and improve RAG system performance by using relevance metrics and A/B testing frameworks

Implement advanced fine-tuning and model customization

- Design and implement advanced fine-tuning methods
- Create and manage synthetic data for fine-tuning
- Monitor and optimize fine-tuned model performance

- Manage a fine-tuned model from development through production deployment

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Study guide for Exam AI-900: Microsoft Azure AI Fundamentals

Article • 05/05/2025

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a free online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted,

there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of May 2, 2025

Audience profile

This exam is an opportunity for you to demonstrate knowledge of machine learning and AI concepts and related Microsoft Azure services. As a candidate for this exam, you should have familiarity with Exam AI-900's self-paced or instructor-led learning material.

This exam is intended for you if you have both technical and non-technical backgrounds. Data science and software engineering experience are not required. However, you would benefit from having awareness of:

- Basic cloud concepts
- Client-server applications

You can use Azure AI Fundamentals to prepare for other Azure role-based certifications like Azure Data Scientist Associate or Azure AI Engineer Associate, but it's not a prerequisite for any of them.

Skills at a glance

- Describe Artificial Intelligence workloads and considerations (15–20%)
- Describe fundamental principles of machine learning on Azure (15–20%)
- Describe features of computer vision workloads on Azure (15–20%)

- Describe features of Natural Language Processing (NLP) workloads on Azure (15–20%)
- Describe features of generative AI workloads on Azure (20–25%)

Describe Artificial Intelligence workloads and considerations (15–20%)

Identify features of common AI workloads

- Identify computer vision workloads
- Identify natural language processing workloads
- Identify document processing workloads
- Identify features of generative AI workloads

Identify guiding principles for responsible AI

- Describe considerations for fairness in an AI solution
- Describe considerations for reliability and safety in an AI solution
- Describe considerations for privacy and security in an AI solution
- Describe considerations for inclusiveness in an AI solution
- Describe considerations for transparency in an AI solution
- Describe considerations for accountability in an AI solution

Describe fundamental principles of machine learning on Azure (15-20%)

Identify common machine learning techniques

- Identify regression machine learning scenarios
- Identify classification machine learning scenarios
- Identify clustering machine learning scenarios
- Identify features of deep learning techniques

- Identify features of the Transformer architecture

Describe core machine learning concepts

- Identify features and labels in a dataset for machine learning
- Describe how training and validation datasets are used in machine learning

Describe Azure Machine Learning capabilities

- Describe capabilities of automated machine learning
- Describe data and compute services for data science and machine learning
- Describe model management and deployment capabilities in Azure Machine Learning

Describe features of computer vision workloads on Azure (15–20%)

Identify common types of computer vision solution

- Identify features of image classification solutions
- Identify features of object detection solutions
- Identify features of optical character recognition solutions
- Identify features of facial detection and facial analysis solutions

Identify Azure tools and services for computer vision tasks

- Describe capabilities of the Azure AI Vision service
- Describe capabilities of the Azure AI Face detection service

Describe features of Natural Language Processing (NLP) workloads on Azure (15–20%)

Identify features of common NLP Workload Scenarios

- Identify features and uses for key phrase extraction

- Identify features and uses for entity recognition
- Identify features and uses for sentiment analysis
- Identify features and uses for language modeling
- Identify features and uses for speech recognition and synthesis
- Identify features and uses for translation

Identify Azure tools and services for NLP workloads

- Describe capabilities of the Azure AI Language service
- Describe capabilities of the Azure AI Speech service

Describe features of generative AI workloads on Azure (20–25%)

Identify features of generative AI solutions

- Identify features of generative AI models
- Identify common scenarios for generative AI
- Identify responsible AI considerations for generative AI

Identify generative AI services and capabilities in Microsoft Azure

- Describe features and capabilities of Azure AI Foundry
- Describe features and capabilities of Azure OpenAI service
- Describe features and capabilities of Azure AI Foundry model catalog

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of April 15, 2026

Audience profile

As a candidate for this Microsoft Certification, you're at the beginning of your career in AI solution development.

For this exam, you should have conceptual knowledge of AI solutions in Azure and the foundational technical skills to work with them. You also need knowledge of Python coding syntax and programming techniques, and you should be familiar with Azure resources.

Skills at a glance

- Identify AI concepts and responsibilities (40–45%)
- Implement AI solutions by using Microsoft Foundry (55–60%)

Identify AI concepts and capabilities (40–45%)

Describe principles of responsible AI

- Describe considerations for fairness in an AI solution
- Describe considerations for reliability and safety in an AI solution
- Describe considerations for privacy and security in an AI solution

- Describe considerations for inclusiveness in an AI solution
- Describe considerations for transparency in an AI solution
- Describe considerations for accountability in an AI solution

Identify AI model components and configurations

- Describe how generative AI models work
- Identify an appropriate AI model, based on capabilities
- Identify appropriate model deployment options and configuration parameters

Identify AI workloads

- Identify scenarios for common AI workloads, including generative and agentic AI, text analysis, speech, computer vision, and information extraction
- Describe common text analysis techniques, including keyword extraction, entity detection, sentiment analysis, and summarization
- Identify features and capabilities of speech recognition and speech synthesis
- Identify features and capabilities of computer vision and image-generation models
- Identify techniques to extract information from text, images, audio, and videos

Implement AI solutions by using Microsoft Foundry (55–60%)

Implement generative AI apps and agents by using Foundry

- Create effective system and user prompts for generative AI models
- Deploy a model and interact with it in the Foundry portal
- Create a lightweight chat client application by using the Foundry SDK
- Create and test a single-agent solution in the Foundry portal
- Create a lightweight client application for an agent

Implement AI solutions for text and speech by using Foundry

- Build a lightweight application that includes text analysis

- Respond to spoken prompts by using a deployed multimodal model
- Build a lightweight application by using Azure Speech in Foundry Tools

Implement AI solutions with computer vision and image-generation capabilities by using Foundry

- Interpret visual input in prompts by using a deployed multimodal model
- Create new visual outputs by using generative models
- Build a lightweight application that includes vision capabilities

Implement AI solutions for information extraction by using Foundry

- Extract information from documents and forms by using Azure Content Understanding in Foundry Tools
- Extract information from images by using Content Understanding
- Extract information from audio and video by using Content Understanding
- Build a lightweight application with information extraction capabilities by using Content Understanding

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of April 17, 2026

Audience profile

As a candidate for this exam, you should have subject matter expertise in implementing, managing, and monitoring an organization’s Microsoft Azure environment, including virtual networks, storage, compute, identity, security, and governance.

As an Azure administrator, you often serve as part of a larger team dedicated to implementing an organization's cloud infrastructure. You also coordinate with other roles to deliver Azure networking, security, database, application development, and DevOps solutions.

You should be familiar with:

- Operating systems
- Networking
- Servers
- Virtualization

In addition, you should have experience with:

- PowerShell
- Azure CLI
- The Azure portal

- Azure Resource Manager templates or Bicep files
- Microsoft Entra ID

Skills at a glance

- Manage Azure identities and governance (20–25%)
- Implement and manage storage (15–20%)
- Deploy and manage Azure compute resources (20–25%)
- Implement and manage virtual networking (15–20%)
- Monitor and maintain Azure resources (10–15%)

Manage Azure identities and governance (20–25%)

Manage Microsoft Entra users and groups

- Create users and groups
- Manage user and group properties
- Manage licenses in Microsoft Entra ID
- Manage external users
- Configure self-service password reset (SSPR)

Manage access to Azure resources

- Manage built-in Azure roles
- Assign roles at different scopes
- Interpret access assignments

Manage Azure subscriptions and governance

- Implement and manage Azure Policy
- Configure resource locks
- Apply and manage tags on resources

- Manage resource groups
- Manage subscriptions
- Manage costs by using alerts, budgets, and Azure Advisor recommendations
- Configure management groups

Implement and manage storage (15–20%)

Configure access to storage

- Configure Azure Storage firewalls and virtual networks
- Create and use shared access signature (SAS) tokens
- Configure stored access policies
- Manage access keys
- Configure identity-based access for Azure Files

Configure and manage storage accounts

- Create and configure storage accounts
- Configure Azure Storage redundancy
- Configure object replication
- Configure storage account encryption
- Manage data by using Azure Storage Explorer and AzCopy

Configure Azure Files and Azure Blob Storage

- Create and configure a file share in Azure Files
- Create and configure a container in Azure Blob Storage
- Configure storage tiers
- Configure soft delete for blobs and containers
- Configure snapshots and soft delete for Azure Files

- Configure blob lifecycle management
- Configure blob versioning

Deploy and manage Azure compute resources (20–25%)

Automate deployment of resources by using Azure Resource Manager (ARM) templates or Bicep files

- Interpret an Azure Resource Manager template or a Bicep file
- Modify an existing Azure Resource Manager template
- Modify an existing Bicep file
- Deploy resources by using an Azure Resource Manager template or a Bicep file
- Export a deployment as an Azure Resource Manager template or convert an Azure Resource Manager template to a Bicep file

Create and configure virtual machines

- Create a virtual machine
- Configure encryption at host for Azure virtual machines
- Move a virtual machine to another resource group, subscription, or region
- Manage virtual machine sizes
- Manage virtual machine disks
- Deploy virtual machines to availability zones and availability sets
- Deploy and configure an Azure Virtual Machine Scale Sets

Provision and manage containers in the Azure portal

- Create and manage an Azure Container Registry
- Provision a container by using Azure Container Instances
- Provision a container by using Azure Container Apps

- Manage sizing and scaling for containers, including Azure Container Instances and Azure Container Apps

Create and configure Azure App Service

- Provision an App Service plan
- Configure scaling for an App Service plan
- Create an App Service
- Configure certificates and Transport Layer Security (TLS) for an App Service
- Map an existing custom DNS name to an App Service
- Configure backup for an App Service
- Configure networking settings for an App Service
- Configure deployment slots for an App Service

Implement and manage virtual networking (15–20%)

Configure and manage virtual networks in Azure

- Create and configure virtual networks and subnets
- Create and configure virtual network peering
- Configure public IP addresses
- Configure user-defined routes
- Troubleshoot network connectivity

Configure secure access to virtual networks

- Create and configure network security groups (NSGs) and application security groups
- Evaluate effective security rules in NSGs
- Implement Azure Bastion
- Configure service endpoints for Azure platform as a service (PaaS)
- Configure private endpoints for Azure PaaS

Configure name resolution and load balancing

- Configure Azure DNS
- Configure an internal or public load balancer
- Troubleshoot load balancing

Monitor and maintain Azure resources (10–15%)

Monitor resources in Azure

- Interpret metrics in Azure Monitor
- Configure log settings in Azure Monitor
- Query and analyze logs in Azure Monitor
- Set up alert rules, action groups, and alert processing rules in Azure Monitor
- Configure and interpret monitoring of virtual machines, storage accounts, and networks by using Azure Monitor Insights
- Use Azure Network Watcher and Connection monitor

Implement backup and recovery

- Create a Recovery Services vault
- Create an Azure Backup vault
- Create and configure a backup policy
- Perform backup and restore operations by using Azure Backup
- Configure Azure Site Recovery for Azure resources
- Perform a failover to a secondary region by using Site Recovery
- Configure and interpret reports and alerts for backups

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community

sites, and videos.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of April 17, 2026

Audience profile

As a candidate for this exam, you're an architect or engineer who designs and manages the SAP landscape on Azure. Your responsibilities include:

- Implementing industry-specific standards for migrations and integrations.
- Ensuring the sustained operation of an SAP solution within the Azure environment.

You recommend services and adjust resources as appropriate for optimal:

- Resiliency
- Performance
- Scale
- Provisioning
- Size
- Monitoring

You partner with cloud administrators, cloud database administrators, and clients to implement solutions, including RISE with SAP. You manage SAP infrastructure by using:

- The Azure portal
- Azure Marketplace

- Azure Resource Manager and Bicep templates

You should have extensive experience and knowledge of the SAP applications and databases including:

- SAP High-performance Analytic Appliance (HANA)
- SAP Business Suite
- SAP NetWeaver

You should also have experience with virtualization, cloud infrastructure, storage structures, high availability, backup, disaster recovery, data protection, and networking.

For this exam, we strongly recommend that candidates have an Azure Administrator Associate certification.

Skills at a glance

- Migrate SAP workloads to Azure (25–30%)
- Design and implement an infrastructure to support SAP workloads on Azure (25–30%)
- Design and implement high availability and disaster recovery (HADR) (20–25%)
- Maintain SAP workloads on Azure (20–25%)

Migrate SAP workloads to Azure (25–30%)

Identify requirements for target infrastructure

- Estimate target sizing for SAP workloads
- Identify supported scenarios for SAP deployments on Azure
- Identify compute, storage, and network requirements for SAP workloads
- Assess constraints imposed by subscription models and quota limits
- Identify software licensing requirements for target workloads
- Identify cost implications for target workloads
- Specify an Azure support plan for the target infrastructure
- Choose between lift and shift, lift-shift-migrate, and lift-shift-migrate to HANA

- Choose an appropriate SAP workload migration strategy and tools

Design and implement an Azure environment to support SAP workloads

- Design and implement authorization and access control for SAP workloads
- Design and implement governance and compliance by using Azure Policy
- Design and implement authentication for SAP workloads
- Design and implement authentication for SAP software as a service (SaaS) applications
- Design and implement a management hierarchy, including management groups, subscriptions, and resource groups
- Design Azure landing zones for SAP

Design and implement integration with SAP RISE

- Design networking for SAP RISE
- Implement networking for SAP RISE
- Design and implement Azure compute, network, and storage services with SAP RISE
- Design and implement integration of data management services such as data archiving
- Design and implement integration of identity and security services with SAP RISE

Design and implement an infrastructure to support SAP workloads on Azure (25–30%)

Design and implement a compute solution for SAP workloads

- Choose an SAP-certified Azure virtual machine for a given SAP workload
- Configure the Azure VM extension for SAP solutions
- Deploy an operating system by using an Azure Marketplace image
- Create a custom image and deploy it to an Azure virtual machine
- Automate a deployment of Azure virtual machines by using IaC, including Bicep and Azure Resource Manager (ARM) templates

- Automate a deployment by using the SAP Deployment Automation Framework
- Automate a deployment by using Azure Center for SAP solutions

Design and implement networking for SAP on Azure virtual machines

- Design and implement virtual networks and subnets
- Implement Accelerated Networking for Azure virtual machines
- Design and configure proximity placement groups
- Design networking to meet SAP workload latency requirements
- Design and implement network flow control
- Design and implement network security
- Design and implement service endpoints and private endpoints for Azure Storage
- Design name resolution for integration with Azure DNS
- Design and configure ExpressRoute for hybrid connectivity

Design and implement a storage solution for SAP on Azure virtual machines

- Choose a storage type
- Specify when to use disk striping and simple volumes
- Design for storage security considerations
- Design and implement data protection
- Design and implement caching for disks
- Configure Write Accelerator
- Configure encryption for storage, disks, and data
- Design and implement volumes by using Azure NetApp Files
- Design and implement volumes by using Azure Files

Design and implement high availability and disaster recovery (HADR) (20–25%)

Design and implement a high availability solution for SAP on Azure virtual machines

- Design for service-level agreement (SLA) considerations
- Design and deploy SAP workloads into availability sets and availability zones
- Design and implement load balancing for high availability
- Configure clustering for HANA and SAP Central Services (SCS)
- Configure clustering for SQL
- Configure Pacemaker and STONITH
- Configure an Azure fence agent or STONITH Block Device (SBD)
- Design and configure storage-level replication for SAP workloads
- Configure restart of SAP systems, instances, and HANA databases

Design and implement a disaster recovery solution for SAP on Azure virtual machines

- Design and implement an Azure Site Recovery strategy for an SAP infrastructure
- Design a disaster recovery solution with regional considerations
- Specify network configurations for disaster recovery
- Design a backup strategy to meet SLA requirements
- Implement policies for backups and snapshots
- Configure and validate snapshots and backups for SAP workloads
- Perform backup and restore
- Test disaster recovery

Maintain SAP workloads on Azure (20–25%)

Optimize performance and costs

- Optimize performance and costs for an SAP workload by using Azure Advisor recommendations
- Analyze and optimize network performance
- Optimize costs by using Azure Savings Plans or Reserved Instances for SAP virtual machines
- Optimize performance and costs by resizing Azure virtual machines
- Optimize storage costs
- Optimize data performance by using archiving
- Optimize performance and costs of SAP application servers and databases

Monitor and maintain SAP on Azure

- Monitor Azure virtual machines by using Azure Monitor
- Monitor high availability by using Azure Monitor
- Monitor storage by using Azure Monitor
- Monitor networking by using Azure Monitor and Azure Network Watcher
- Configure Azure Monitor for SAP solutions
- Manage backups by using Azure Backup
- Start and stop SAP systems by using Azure Center for SAP solutions
- Manage virtual instances by using Azure Center for SAP solutions
- Implement the SAP Landscape Management (LaMa) connector for Azure

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Study guide for Exam AZ-140: Configuring and Operating Microsoft Azure Virtual Desktop

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be

times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 20, 2026

Audience profile

As a candidate for this exam, you should be a server or desktop administrator with subject matter expertise in designing, implementing, managing, and maintaining Azure Virtual Desktop experiences and remote apps for any device.

To deliver these experiences, you should work closely with:

- Azure administrators
- Azure architects
- Microsoft 365 administrators
- Azure security engineers
- Azure Local administrators

You should have experience with Azure technologies, including:

- Compute
- Networking
- Identity

- Storage
- Resiliency

You should be able to manage end-user desktop environments, including delivering applications and configuring user settings. You should use the Azure portal, templates, scripting, and command-line tools to manage an Azure Virtual Desktop deployment.

Skills at a glance

- Plan and implement an Azure Virtual Desktop infrastructure (40–45%)
- Plan and implement identity and security (15–20%)
- Plan and implement user environments and apps (20–25%)
- Monitor and maintain an Azure Virtual Desktop infrastructure (10–15%)

Plan and implement an Azure Virtual Desktop infrastructure (40–45%)

Plan, implement, and manage networking for Azure Virtual Desktop

- Assess network capacity and speed requirements for Azure Virtual Desktop
- Design network configuration for session hosts to meet requirements for Azure Virtual Desktop
- Plan and implement Remote Desktop Protocol (RDP) Shortpath, RDP Multipath, and quality of service (QoS) policies
- Plan and implement an Azure Private Link solution for Azure Virtual Desktop
- Monitor and troubleshoot network connectivity

Plan and implement storage for Azure Virtual Desktop user data

- Plan storage for Azure Virtual Desktop user data
- Implement storage for FSLogix components
- Implement storage accounts for Azure Virtual Desktop
- Implement file shares for Azure Virtual Desktop

- Implement Azure NetApp Files for Azure Virtual Desktop

Plan host pools and session hosts

- Recommend resource groups, subscriptions, and management groups for Azure Virtual Desktop resources
- Recommend an operating system (OS) for Azure Virtual Desktop session hosts
- Recommend an appropriate licensing model for Azure Virtual Desktop based on requirements
- Plan a host pool architecture
- Design an Azure Virtual Desktop configuration for performance requirements
- Design an Azure Virtual Desktop configuration for Azure Virtual Machines capacity requirements

Implement host pools and session hosts

- Create host pools and session hosts by using the Azure portal
- Automate creation of Azure Virtual Desktop hosts and host pools by using PowerShell, Azure CLI, Azure Resource Manager templates (ARM templates), and Bicep files
- Configure host pool and session host settings
- Configure licensing for session hosts, including user eligibility for Windows client access and RDS Client Access License (CAL) requirements for Windows Server

Create and manage session host images

- Create an image manually
- Create an image by using Azure VM Image Builder
- Modify an image
- Plan and implement lifecycle management for images
- Apply OS and application updates to an image
- Create a session host by using a custom image

- Plan and implement image storage, including Azure Compute Gallery

Plan and implement identity and security (15–20%)

Plan and implement identity integration

- Select an identity scenario for Azure Virtual Desktop, including Active Directory Domain Services (AD DS), Microsoft Entra ID, and Microsoft Entra Domain Services
- Specify requirements to configure the Azure Virtual Desktop session host for an identity scenario
- Plan and implement Azure role-based access control (Azure RBAC) for Azure Virtual Desktop
- Plan and implement Microsoft Entra Conditional Access policies for connections to Azure Virtual Desktop
- Plan and implement authentication options in Azure Virtual Desktop, including passwordless, smart card, and multifactor authentication
- Manage roles, groups, and rights assignments on Azure Virtual Desktop session hosts
- Configure Microsoft Entra single sign-on

Plan and implement security

- Plan, implement, and manage security for Azure Virtual Desktop session hosts by using Microsoft Defender for Cloud
- Configure session host protection by using Microsoft Defender Antivirus
- Configure session host protection by using Microsoft Defender for Endpoint, including onboarding and scanning options
- Implement and manage network security for connections to Azure Virtual Desktop, including user defined routes (UDRs), network security groups (NSGs), and Azure Firewall
- Configure Azure Bastion or just-in-time (JIT) VM access for administrative access to session hosts
- Plan and implement Windows threat protection features on Azure Virtual Desktop session hosts, including App Control for Business and Controlled Folder Access

- Plan for and implement Azure confidential VMs and Trusted Launch security features for Azure Virtual Desktop session hosts

Plan and implement user environments and apps (20–25%)

Plan and implement FSLogix

- Recommend FSLogix configuration
- Configure FSLogix Profile Containers
- Configure FSLogix ODFC containers
- Configure FSLogix Cloud Cache
- Implement FSLogix application masking

Plan and implement user experience and client settings

- Choose an Azure Virtual Desktop client
- Choose a deployment method for the client
- Deploy and troubleshoot Azure Virtual Desktop clients
- Configure device redirection
- Configure multimedia redirection
- Configure printing and Universal Print
- Configure user settings through Microsoft Intune policies or Group Policy
- Configure Remote Desktop Protocol (RDP) properties on a host pool
- Configure session timeout properties
- Implement the Start VM on Connect feature
- Assign and unassign personal desktops to users

Install and configure apps on a session host

- Choose a method for deploying an app to Azure Virtual Desktop

- Create and configure an application group
- Assign users to application groups
- Publish an application as a RemoteApp
- Implement and manage Microsoft 365 Apps on Azure Virtual Desktop session hosts
- Implement and manage OneDrive, including multisession environments
- Implement and manage Microsoft Teams, including the Remote Desktop WebRTC Redirector Service
- Implement and manage browsers for Azure Virtual Desktop sessions
- Configure dynamic application delivery by using App attach
- Create an application package for App attach

Monitor and maintain an Azure Virtual Desktop infrastructure (10–15%)

Monitor and manage Azure Virtual Desktop services

- Configure log collection and analysis for Azure Virtual Desktop session hosts
- Monitor Azure Virtual Desktop by using Azure Monitor
- Customize Azure Monitor workbooks for Azure Virtual Desktop Insights
- Optimize session host capacity and performance
- Implement autoscaling in host pools
- Monitor and manage active sessions and application groups

Plan and implement updates, backups, and disaster recovery

- Recommend an update strategy for session hosts
- Plan and implement a disaster recovery plan for Azure Virtual Desktop
- Plan for multi-region implementation
- Design and implement a backup strategy for Azure Virtual Desktop

- Configure backup and restore for FSLogix user profiles, personal desktops, and images

Skills measured as of January 14, 2026

Audience profile

As a candidate for this exam, you're responsible for participating in all phases of development, including requirements gathering, design, development, deployment, security, maintenance, performance tuning, and monitoring.

You should be proficient in Azure:

- SDKs
- Data storage options
- Data connections
- APIs
- App authentication and authorization
- Compute and container deployment
- Debugging

To implement solutions, you partner with:

- Cloud solution architects
- DBAs
- DevOps
- Infrastructure admins
- Other stakeholders

You should have:

- At least two years of programming experience.
- Proficiency in programming with Azure SDKs.
- Proficiency using Azure CLI, Azure PowerShell, and other tools.

Skills at a glance

- Develop Azure compute solutions (25–30%)
- Develop for Azure storage (15–20%)
- Implement Azure security (15–20%)
- Monitor, troubleshoot, and optimize Azure solutions (5–10%)
- Connect to and consume Azure services and third-party services (20–25%)

Develop Azure compute solutions (25–30%)

Implement containerized solutions

- Create and manage container images for solutions
- Publish an image to Azure Container Registry
- Run containers by using Azure Container Instances
- Create solutions by using Azure Container Apps

Implement Azure App Service Web Apps

- Create an Azure App Service Web App
- Configure and implement diagnostics and logging
- Deploy code and containerized solutions
- Configure settings including Transport Layer Security (TLS), API settings, and service connections
- Implement autoscaling
- Configure deployment slots

Implement Azure Functions

- Create and configure an Azure Functions app
- Implement input and output bindings
- Implement function triggers by using data operations, timers, and webhooks

Develop for Azure storage (15–20%)

Develop solutions that use Azure Cosmos DB

- Perform operations on containers and items by using the SDK
- Set the appropriate consistency level for operations
- Implement change feed notifications

Develop solutions that use Azure Blob Storage

- Set and retrieve properties and metadata
- Perform operations on data by using the appropriate SDK
- Implement storage policies and data lifecycle management

Implement Azure security (15–20%)

Implement user authentication and authorization

- Authenticate and authorize users by using the Microsoft Identity platform
- Authenticate and authorize users and apps by using Microsoft Entra ID
- Create and implement shared access signatures
- Implement solutions that interact with Microsoft Graph

Implement secure Azure solutions

- Secure app configuration data by using Azure App Configuration or Azure Key Vault
- Develop code that uses keys, secrets, and certificates stored in Azure Key Vault

- Implement Managed Identities for Azure resources

Monitor and troubleshoot Azure solutions (5–10%)

Monitor and troubleshoot solutions by using Azure Monitor Application Insights

- Monitor and analyze metrics, logs, and traces
- Implement availability tests and alerts
- Instrument an app or service to use Application Insights

Connect to and consume Azure services and third-party services (20–25%)

Implement Azure API Management

- Create an Azure API Management instance
- Create and document APIs
- Configure access to APIs
- Implement policies for APIs

Develop event-based solutions

- Implement solutions that use Azure Event Grid
- Implement solutions that use Azure Event Hubs

Develop message-based solutions

- Implement solutions that use Azure Service Bus
- Implement solutions that use Azure Queue Storage

Skills measured as of April 17, 2026

Audience profile

As an Azure solutions architect, you have subject matter expertise in designing cloud and hybrid solutions that run on Azure, including:

- Compute
- Network
- Storage
- Monitoring
- Security

Your responsibilities for this role include advising stakeholders and translating business requirements into designs for Azure solutions that align with the Azure Well-Architected Framework and Cloud Adoption Framework for Azure. In this role, you implement solutions on Azure by partnering with various other job roles, including:

- Developers
- Administrators
- Security engineers
- Data engineers

As a candidate for this exam, you should have advanced experience and knowledge of IT operations, including networking, virtualization, identity, security, business continuity, disaster recovery, data platforms, and governance. You should manage how decisions in each area affect an overall solution. In addition, you should have experience with:

- Azure administration
- Azure development
- DevOps processes

Skills at a glance

- Design identity, governance, and monitoring solutions (25–30%)
- Design data storage solutions (20–25%)
- Design business continuity solutions (15–20%)
- Design infrastructure solutions (30–35%)

Design identity, governance, and monitoring solutions (25–30%)

Design solutions for logging and monitoring

- Recommend a logging solution
- Recommend a solution for routing logs
- Recommend a monitoring solution

Design authentication and authorization solutions

- Recommend an authentication solution
- Recommend an identity management solution
- Recommend a solution for authorizing access to Azure resources
- Recommend a solution for authorizing access to on-premises resources
- Recommend a solution to manage secrets, certificates, and keys

Design governance

- Recommend a structure for management groups, subscriptions, and resource groups, and a strategy for resource tagging

- Recommend a solution for managing compliance
- Recommend a solution for identity governance

Design data storage solutions (20–25%)

Design data storage solutions for relational data

- Recommend a solution for storing relational data
- Recommend a database service tier and compute tier
- Recommend a solution for database scalability
- Recommend a solution for data protection

Design data storage solutions for semi-structured and unstructured data

- Recommend a solution for storing semi-structured data
- Recommend a solution for storing unstructured data
- Recommend a data storage solution to balance features, performance, and costs
- Recommend a data solution for protection and durability

Design data integration

- Recommend a solution for data integration
- Recommend a solution for data analysis

Design business continuity solutions (15–20%)

Design solutions for backup and disaster recovery

- Recommend a recovery solution for Azure and hybrid workloads that meets recovery objectives
- Recommend a backup and recovery solution for compute
- Recommend a backup and recovery solution for databases
- Recommend a backup and recovery solution for unstructured data

Design for high availability

- Recommend a high availability solution for compute
- Recommend a high availability solution for relational data
- Recommend a high availability solution for semi-structured and unstructured data

Design infrastructure solutions (30–35%)

Design compute solutions

- Specify components of a compute solution based on workload requirements
- Recommend a virtual machine-based solution
- Recommend a container-based solution
- Recommend a serverless-based solution
- Recommend a compute solution for batch processing

Design an application architecture

- Recommend a messaging architecture
- Recommend an event-driven architecture
- Recommend a solution for API integration
- Recommend a caching solution for applications
- Recommend an application configuration management solution
- Recommend an automated deployment solution for applications

Design migrations

- Evaluate a migration solution that leverages the Microsoft Cloud Adoption Framework for Azure
- Evaluate on-premises servers, data, and applications for migration
- Recommend a solution for migrating workloads to infrastructure as a service (IaaS) and platform as a service (PaaS)

- Recommend a solution for migrating databases
- Recommend a solution for migrating unstructured data

Design network solutions

- Recommend a connectivity solution that connects Azure resources to the internet
- Recommend a connectivity solution that connects Azure resources to on-premises networks
- Recommend a solution to optimize network performance
- Recommend a solution to optimize network security
- Recommend a load-balancing and routing solution

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Skills measured as of July 27, 2026

Audience profile

As a DevOps engineer, you're a developer or infrastructure administrator who also has subject matter expertise in working with people, processes, and products to enable continuous delivery of value in organizations.

Your responsibilities for this role include delivering Microsoft DevOps solutions that provide continuous security, integration, testing, delivery, deployment, monitoring, and feedback. You design and implement flow of work, collaboration, communication, source control, and automation.

As a DevOps engineer, you work on cross-functional teams that include:

- Developers
- Site reliability engineers
- Azure administrators
- Security engineers

You must have experience both administering and developing in Azure, with strong skills in at least one of these areas. You should also have experience implementing both GitHub and Azure DevOps solutions.

Skills at a glance

- Design and implement processes and communications (10–15%)
- Design and implement a source control strategy (10–15%)
- Design and implement build and release pipelines (50–55%)
- Develop a security and compliance plan (10–15%)
- Implement an instrumentation strategy (5–10%)

Design and implement processes and communications (10–15%)

Design and implement traceability and flow of work

- Design and implement a structure for the flow of work, including GitHub Flow
- Design and implement a strategy for feedback cycles, including notifications and GitHub Issues
- Design and implement integration for tracking work, including GitHub projects, Azure Boards, and repositories
- Design and implement source, bug, and quality traceability

Design and implement appropriate metrics and queries for DevOps

- Design and implement a dashboard, including flow of work, such as cycle times, time to recovery, and lead time
- Design and implement appropriate metrics and queries for project planning
- Design and implement appropriate metrics and queries for development
- Design and implement appropriate metrics and queries for testing
- Design and implement appropriate metrics and queries for security
- Design and implement appropriate metrics and queries for delivery
- Design and implement appropriate metrics and queries for operations

Configure collaboration and communication

- Document a project by configuring wikis and process diagrams, including Markdown and Mermaid syntax
- Configure release documentation, including release notes and API documentation
- Automate creation of documentation from Git history
- Configure integration by using webhooks
- Configure integration between Azure Boards and GitHub repositories
- Configure integration between GitHub or Azure DevOps and Microsoft Teams

Design and implement a source control strategy (10–15%)

Design and implement branching strategies for the source code

- Design a branch strategy, including trunk-based, feature branch, and release branch
- Design and implement a pull request workflow by using branch policies and branch protection rules
- Implement branch merging restrictions by using branch policies and branch protection rules

Configure and manage repositories

- Design and implement a strategy for managing large files, including Git Large File Storage (LFS) and git-fat
- Design a strategy for scaling and optimizing a Git repository, including Scalar and cross-repository sharing
- Configure permissions in the source control repository
- Configure tags to organize the source control repository
- Recover specific data by using Git commands
- Remove specific data from source control

Design and implement build and release pipelines (50–55%)

Design and implement a package management strategy

- Recommend package management tools including GitHub Packages and Azure Artifacts
- Design and implement package feeds and views for local and upstream packages
- Design and implement a dependency versioning strategy for code assets and packages, including semantic versioning (SemVer) and date-based (CalVer)
- Design and implement a versioning strategy for pipeline artifacts

Design and implement a testing strategy for pipelines

- Design and implement quality and release gates, including security and governance
- Design a comprehensive testing strategy, including local tests, unit tests, integration tests, and load tests
- Implement tests in a pipeline, including configuring test tasks, configuring test agents, and integration of test results
- Implement code coverage analysis

Design and implement pipelines

- Select a deployment automation solution, including GitHub Actions and Azure Pipelines
- Design and implement a GitHub runner or Azure DevOps agent infrastructure, including cost, tool selection, licenses, connectivity, and maintainability
- Design and implement integration between GitHub repositories and Azure Pipelines
- Develop and implement pipeline trigger rules
- Develop pipelines by using YAML
- Design and implement a strategy for job execution order, including parallelism and multi-stage pipelines
- Develop and implement complex pipeline scenarios, such as hybrid pipelines, VM templates, and self-hosted runners or agents
- Create reusable pipeline elements, including YAML templates, task groups, variables, and variable groups
- Design and implement checks and approvals by using YAML-based environments

Design and implement deployments

- Design a deployment strategy, including blue-green, canary, ring, progressive exposure, feature flags, and A/B testing
- Design a pipeline to ensure that dependency deployments are reliably ordered
- Plan for minimizing downtime during deployments by using load balancing, rolling deployments, and deployment slot usage and swap
- Design a hotfix path plan for responding to high-priority code fixes
- Design and implement a resiliency strategy for deployment
- Implement feature flags by using Azure App Configuration Feature Manager
- Implement application deployment by using containers, binaries, and scripts
- Implement a deployment that includes database tasks

Design and implement infrastructure as code (IaC)

- Recommend a configuration management technology for application infrastructure
- Implement a configuration management strategy for application infrastructure
- Define an IaC strategy, including source control and automation of testing and deployment
- Design and implement desired state configuration for environments, including Azure Automation State Configuration, Azure Resource Manager, Bicep, and Azure Machine Configuration
- Design and implement Azure Deployment Environments for on-demand self-deployment

Maintain pipelines

- Monitor pipeline health, including failure rate, duration, and flaky tests
- Optimize a pipeline for cost, time, performance, and reliability
- Optimize pipeline concurrency for performance and cost
- Design and implement a retention strategy for pipeline artifacts and dependencies
- Migrate a pipeline from classic to YAML in Azure Pipelines

Develop a security and compliance plan (10–15%)

Design and implement authentication and authorization methods

- Choose between Microsoft Entra service principals and managed identities for Azure resources (system-assigned and user-assigned)
- Implement and manage GitHub authentication, including GitHub Apps, GITHUB_TOKEN, and personal access tokens
- Implement and manage Azure DevOps service connections and personal access tokens
- Design and implement permissions and roles in GitHub
- Design and implement permissions and security groups in Azure DevOps
- Recommend appropriate access levels, including stakeholder access in Azure DevOps and outside collaborator access in GitHub
- Configure projects and teams in Azure DevOps

Design and implement a strategy for managing sensitive information in automation

- Implement and manage secrets, keys, and certificates by using Azure Key Vault
- Implement and manage secrets and secretless authentication (for example, workload identity federation/OpenID Connect) in GitHub Actions and Azure Pipelines
- Design and implement a strategy for managing sensitive files during deployment, including Azure Pipelines secure files
- Design pipelines to prevent leakage of sensitive information

Automate security and compliance scanning

- Design a strategy for security and compliance scanning, including dependency, code, secret, and licensing scanning
- Configure Microsoft Defender for Cloud DevOps Security
- Configure GitHub Advanced Security for GitHub and GitHub Advanced Security for Azure DevOps

- Integrate GitHub Advanced Security with Microsoft Defender for Cloud
- Automate container scanning, including scanning container images and configuring an action to run CodeQL analysis in a container
- Automate analysis of vulnerabilities of open-source components by using Dependabot alerts

Implement an instrumentation strategy (5–10%)

Configure monitoring for a DevOps environment

- Configure Azure Monitor and Azure Monitor Logs to integrate with DevOps tools
- Configure collection of telemetry by using Azure Monitor Application Insights, Azure VM Insights, Azure Container Insights, Azure Monitor for Storage, and Azure Monitor for Networks
- Configure monitoring in GitHub, including enabling insights and creating and configuring charts
- Configure alerts for events in GitHub Actions and Azure Pipelines

Analyze metrics from instrumentation

- Inspect infrastructure performance indicators, including CPU, memory, disk, and network
- Analyze metrics by using collected telemetry, including usage and application performance
- Inspect distributed tracing by using Azure Monitor Application Insights
- Interrogate logs using basic Kusto Query Language (KQL) queries

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Study guide for Exam AZ-500: Microsoft Azure Security Technologies

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of January 22, 2026

Audience profile

As the Azure security engineer, you implement, manage, and monitor security for resources in Azure, multi-cloud, and hybrid environments as part of an end-to-end infrastructure. You implement and manage security components and configurations by using Microsoft Defender for Cloud and other tools. You ensure that the infrastructure aligns with standards and best practices such as the Microsoft Cloud Security Benchmark (MCSB).

Your responsibilities as an Azure security engineer include:

- Managing the security posture.
- Implementing threat protection.
- Identifying and remediating vulnerabilities.

You are responsible for implementing regulatory compliance controls for Azure infrastructure including identity and access, network, compute, storage, data, applications, asset management, backup and recovery, and devops security.

As an Azure security engineer, you work with architects, administrators, and developers to plan and implement solutions that meet security and compliance requirements. You may also collaborate with security operations in responding to security incidents in Azure.

You should have:

- Practical experience in administration of Microsoft Azure and hybrid environments.
- Strong familiarity with Microsoft Entra ID, as well as compute, network, and storage in Azure.

Skills at a glance

- Secure identity and access (15–20%)
- Secure networking (20–25%)
- Secure compute, storage, and databases (20–25%)
- Secure Azure using Microsoft Defender for Cloud and Microsoft Sentinel (30–35%)

Secure identity and access (15–20%)

Manage security controls for identity and access

- Manage Azure built-in role assignments
- Manage custom roles, including Azure roles and Microsoft Entra roles
- Plan and manage Azure resources in Microsoft Entra Privileged Identity Management, including settings and assignments
- Implement multi-factor authentication (MFA) for access to Azure resources
- Implement Conditional Access policies for cloud resources in Azure

Manage Microsoft Entra application access and managed identities

- Manage access to enterprise applications in Microsoft Entra ID, including OAuth permission grants
- Manage Microsoft Entra app registrations
- Configure app registration permission scopes
- Manage app registration permission consent
- Manage and use service principals
- Manage managed identities

Secure networking (20–25%)

Plan and implement security for virtual networks

- Plan and implement Network Security Groups (NSGs) and Application Security Groups (ASGs)

- Manage virtual networks by using Azure Virtual Network Manager
- Plan and implement user-defined routes (UDRs)
- Plan and implement Virtual Network peering or VPN gateway
- Plan and implement Virtual WAN, including secured virtual hub
- Secure VPN connectivity, including point-to-site and site-to-site
- Implement encryption over ExpressRoute
- Configure firewall settings on Azure resources
- Monitor network security by using Network Watcher

Plan and implement security for private access to Azure resources

- Plan and implement virtual network Service Endpoints
- Plan and implement Private Endpoints
- Plan and implement Private Link services
- Plan and implement network integration for Azure App Service and Azure Functions
- Plan and implement network security configurations for an App Service Environment (ASE)
- Plan and implement network security configurations for an Azure SQL Managed Instance

Plan and implement security for public access to Azure resources

- Plan and implement Transport Layer Security (TLS) to applications, including Azure App Service and API Management
- Plan, implement, and manage an Azure Firewall, including Azure Firewall Manager and firewall policies
- Plan and implement an Azure Application Gateway
- Plan and implement an Azure Front Door, including Content Delivery Network (CDN)
- Plan and implement a Web Application Firewall (WAF)
- Recommend when to use Azure DDoS Protection Standard

Secure compute, storage, and databases (20–25%)

Plan and implement advanced security for compute

- Plan and implement remote access to virtual machines, including Azure Bastion and just-in-time (JIT) VM access
- Configure network isolation for Azure Kubernetes Service (AKS)
- Secure and monitor AKS
- Configure authentication for AKS
- Configure security monitoring for Azure Container Instances (ACIs)
- Configure security monitoring for Azure Container Apps (ACAs)
- Manage access to Azure Container Registry (ACR)
- Configure disk encryption, including Azure Disk Encryption (ADE), encryption at host, and confidential disk encryption
- Recommend security configurations for Azure API Management

Plan and implement security for storage

- Configure access control for storage accounts
- Manage storage account access keys
- Select and configure an appropriate method for access to Azure Files
- Select and configure an appropriate method for access to Azure Blob Storage
- Select and configure appropriate methods for protecting against data security threats, including soft delete, backups, versioning, and immutable storage
- Configure Bring your own key (BYOK)
- Enable double encryption at the Azure Storage infrastructure level

Plan and implement security for Azure SQL Database and Azure SQL Managed Instance

- Enable Microsoft Entra database authentication

- Enable database auditing
- Plan and implement dynamic masking
- Implement Transparent Data Encryption (TDE)
- Recommend when to use Azure SQL Database Always Encrypted

Secure Azure using Microsoft Defender for Cloud and Microsoft Sentinel (30–35%)

Implement and manage enforcement of cloud governance policies

- Create, assign, and interpret policies and initiatives in Azure Policy
- Configure Azure Key Vault network settings
- Configure access to Key Vault, including vault access policies and Azure Role Based Access Control
- Manage certificates, secrets, and keys
- Configure key rotation
- Perform backup and recovery of certificates, secrets, and keys
- Implement security controls to protect backups
- Implement security controls for asset management

Manage security posture by using Microsoft Defender for Cloud

- Identify and remediate security risks by using the Microsoft Defender for Cloud Secure Score and Inventory
- Assess compliance against security frameworks by using Microsoft Defender for Cloud
- Manage compliance standards in Microsoft Defender for Cloud
- Add custom standards to Microsoft Defender for Cloud
- Connect hybrid cloud and multi-cloud environments to Microsoft Defender for Cloud, including Amazon Web Services (AWS) and Google Cloud Platform (GCP)
- Implement and use Microsoft Defender External Attack Surface Management (EASM)

Configure and manage threat protection by using Microsoft Defender for Cloud

- Enable cloud workload protection plans in Microsoft Defender for Cloud
- Configure Microsoft Defender for Servers, Microsoft Defender for Databases, and Microsoft Defender for Storage
- Implement and manage agentless scanning for virtual machines in Microsoft Defender for Servers
- Implement and manage Microsoft Defender Vulnerability Management for Azure virtual machines
- Connect to and configure settings in Microsoft Defender for Cloud Devops Security, including GitHub, Azure DevOps, and GitLab

Configure and manage security monitoring and automation solutions

- Manage and respond to security alerts in Microsoft Defender for Cloud
- Configure workflow automation by using Microsoft Defender for Cloud
- Monitor network security events and performance data by configuring data collection rules (DCRs) in Azure Monitor
- Configure data connectors in Microsoft Sentinel
- Enable analytics rules in Microsoft Sentinel
- Configure automation in Microsoft Sentinel

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 27, 2026

Audience profile

As a candidate for this exam, you should have subject matter expertise in planning, implementing, and managing Azure networking solutions, including:

- Core network infrastructure
- Hybrid connectivity
- Application delivery services
- Private access to Azure services
- Network security

As an Azure network engineer your responsibilities include optimizing performance, resiliency, scale, and security of Azure networking solutions. You proactively monitor network environments to identify issues and minimize risk. You also identify and resolve connectivity issues.

To deliver Azure solutions, you work with:

- Solution architects
- Cloud administrators
- Security engineers
- Application developers
- DevOps engineers

As a candidate for this exam, you should have experience creating and managing compute, storage, and networking resources in Azure. You should understand networking fundamentals, such as:

- Name resolution
- Network protocols
- Network address management

Skills at a glance

- Design and implement core networking infrastructure (25–30%)
- Design, implement, and manage connectivity services (20–25%)
- Design and implement application delivery services (15–20%)
- Design and implement private access to Azure services (10–15%)
- Design and implement Azure network security services (15–20%)

Design and implement core networking infrastructure (25–30%)

Design and implement IP addressing for Azure resources

- Plan and implement network segmentation and address spaces
- Create a virtual network (VNet)
- Plan and configure subnetting for services, including virtual network gateways, private endpoints, service endpoints, firewalls, application gateways, VNet-integrated platform services, and Azure Bastion
- Plan and configure subnet delegation
- Plan and configure shared or dedicated subnets
- Create a Public IP Prefix
- Choose when to use a public IP address prefix
- Plan and implement a Custom IP address prefix (bring your own IP)
- Create a public IP address
- Associate public IP addresses to resources

Design and implement name resolution

- Design name resolution inside a VNet
- Configure DNS settings for a VNet
- Design public DNS zones
- Design private DNS zones
- Configure public and private DNS zones
- Link a private DNS zone to a VNet
- Design and implement Azure DNS Private Resolver

Design and implement VNet connectivity and routing

- Design service chaining, including gateway transit
- Implement VNet peering
- Implement and manage virtual network connectivity by using Azure Virtual Network Manager
- Design and implement user-defined routes (UDRs)
- Associate a route table with a subnet
- Configure forced tunneling
- Diagnose and resolve routing issues
- Design and implement Azure Route Server
- Identify appropriate use cases for Azure NAT Gateway
- Implement Azure NAT Gateway

Monitor networks

- Configure monitoring, network diagnostics, and logs in Azure Network Watcher
- Monitor and troubleshoot network health by using Azure Network Watcher
- Monitor and troubleshoot networks by using Azure Monitor for Networks
- Activate and monitor distributed denial-of-service (DDoS) protection

- Evaluate network security recommendations identified by Microsoft Defender for Cloud Secure Score
- Evaluate network security recommendations identified by Microsoft Defender for Cloud attack path analysis
- Identify network resources by using Cloud Security Explorer in Microsoft Defender for Cloud

Design, implement, and manage connectivity services (20–25%)

Design, implement, and manage a site-to-site VPN connection

- Design a site-to-site VPN connection, including for high availability
- Select an appropriate virtual network gateway stock-keeping unit (SKU) for site-to-site VPN requirements
- Implement a site-to-site VPN connection
- Identify when to use a policy-based VPN versus a route-based VPN connection
- Create and configure a local network gateway
- Create and configure an IPsec/Internet Key Exchange (IKE) policy
- Create and configure a virtual network gateway
- Diagnose and resolve virtual network gateway connectivity issues
- Implement Azure Extended Network

Design, implement, and manage a point-to-site VPN connection

- Select an appropriate virtual network gateway SKU for point-to-site VPN requirements
- Select and configure a tunnel type
- Select an appropriate authentication method
- Configure RADIUS authentication
- Configure authentication by using Microsoft Entra ID
- Implement a VPN client configuration file

- Diagnose and resolve client-side and authentication issues
- Specify Azure requirements for Always On VPN
- Specify Azure requirements for Azure Network Adapter

Design, implement, and manage Azure ExpressRoute

- Select an ExpressRoute connectivity model
- Select an appropriate ExpressRoute SKU and tier
- Design and implement ExpressRoute to meet requirements, including cross-region connectivity, redundancy, and disaster recovery
- Design and implement ExpressRoute options, including Global Reach, FastPath, and ExpressRoute Direct
- Choose between Azure private peering only, Microsoft peering only, or both
- Configure Azure private peering
- Configure Microsoft peering
- Create and configure an ExpressRoute gateway
- Connect a virtual network to an ExpressRoute circuit
- Recommend a route advertisement configuration
- Configure encryption over ExpressRoute
- Implement Bidirectional Forwarding Detection
- Diagnose and resolve ExpressRoute connection issues

Design and implement an Azure Virtual WAN architecture

- Select a Virtual WAN SKU
- Design a Virtual WAN architecture, including selecting types and services
- Create a virtual hub in Virtual WAN
- Choose an appropriate scale unit for each gateway type

- Deploy a gateway into a virtual hub
- Configure virtual hub routing
- Integrate a virtual hub with a third-party NVA for cloud connectivity

Design and implement application delivery services (15–20%)

Design and implement Azure Load Balancer and Azure Traffic Manager

- Map requirements to features and capabilities of Azure Load Balancer
- Identify appropriate use cases for Azure Load Balancer
- Choose an Azure Load Balancer SKU and tier
- Choose between public and internal load balancers
- Choose between regional and cross-region load balancers
- Create and configure an Azure Load Balancer
- Implement Azure Traffic Manager
- Implement Gateway Load Balancer
- Implement a load balancing rule
- Create and configure inbound NAT rules
- Create and configure explicit outbound rules, including source network address translation (SNAT)

Design and implement Azure Application Gateway

- Map requirements to features and capabilities of Azure Application Gateway
- Identify appropriate use cases for Azure Application Gateway
- Choose between manual and autoscale
- Create a backend pool
- Configure health probes
- Configure listeners

- Configure routing rules
- Configure HTTP settings
- Configure Transport Layer Security (TLS)
- Configure rewrite rule sets

Design and implement Azure Front Door

- Map requirements to features and capabilities of Azure Front Door
- Identify appropriate use cases for Azure Front Door
- Choose an appropriate tier
- Configure an Azure Front Door, including routing, origins, and endpoints
- Configure TLS termination and end-to-end TLS encryption
- Configure caching
- Configure traffic acceleration
- Implement rules, URL rewrite, and URL redirect
- Secure an origin by using Azure Private Link in Azure Front Door

Design and implement private access to Azure services (10–15%)

Design and implement Azure Private Link service and Azure private endpoints

- Plan private endpoints
- Create private endpoints
- Configure access to private endpoints
- Create a Private Link service
- Integrate Private Link and Private Endpoint with DNS
- Integrate a Private Link service with on-premises clients

Design and implement service endpoints

- Choose when to use a service endpoint
- Create service endpoints
- Configure service endpoint policies
- Configure access to service endpoints

Design and implement Azure network security services (15–20%)

Implement and manage network security groups

- Create a network security group (NSG)
- Associate a NSG to a subnet or network interface
- Create an application security group (ASG)
- Associate an ASG to a network interface
- Create and configure NSG inbound and outbound security rules
- Implement virtual network flow logs
- Interpret virtual network flow logs
- Verify IP flow
- Configure an NSG for remote server administration, including Azure Bastion
- Implement and manage virtual network security by using Azure Virtual Network Manager

Design and implement Azure Firewall and Azure Firewall Manager

- Map requirements to features and capabilities of Azure Firewall
- Select an appropriate Azure Firewall SKU
- Design an Azure Firewall deployment
- Create and implement an Azure Firewall deployment
- Configure Azure Firewall rules

- Create and implement Azure Firewall Manager policies
- Create a secure hub by deploying Azure Firewall inside an Azure Virtual WAN hub

Design and implement a Web Application Firewall (WAF) deployment

- Map requirements to features and capabilities of WAF
- Design a WAF deployment
- Configure detection or prevention mode
- Configure rule sets for WAF on Azure Front Door
- Configure rule sets for WAF on Application Gateway
- Implement a WAF policy
- Associate a WAF policy

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English

version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of January 21, 2026

Audience profile

As a candidate for this exam, you're responsible for administering Windows Server as a workload in both on-premises and hybrid environments.

In this role, you deploy, implement, manage, and troubleshoot Windows Server in Azure as well as migrating and deploying workloads to Azure. You administer identity, security, management, compute, networking, storage, monitoring, high availability, and disaster recovery for Windows Server. You typically collaborate with architects, administrators and engineers.

You use administrative tools and technologies such as Windows Admin Center, PowerShell, Azure Arc, Azure Policy, Azure Monitor, Azure Update Manager, Microsoft Defender for Identity, Microsoft Defender for Cloud, and IaaS virtual machine (VM) administration.

As a candidate for this exam, you should have several years of experience with Windows Server operating systems.

Skills at a glance

- Deploy and manage Active Directory Domain Services (AD DS) in on-premises and cloud environments (30–35%)
- Manage Windows Servers and workloads in a hybrid environment (10–15%)

- Manage virtual machines and containers (15–20%)
- Implement and manage an on-premises and hybrid networking infrastructure (15–20%)
- Manage storage and file services (15–20%)

Deploy and manage Active Directory Domain Services (AD DS) in on-premises and cloud environments (30–35%)

Deploy and manage AD DS domain controllers

- Deploy and manage domain controllers on-premises
- Deploy and manage domain controllers in Azure
- Deploy read-only domain controllers (RODCs)
- Manage and troubleshoot flexible single master operation (FSMO) roles

Configure and manage multi-site, multi-domain, and multi-forest environments

- Configure and manage forest and domain trusts
- Configure and manage AD DS sites
- Configure and manage AD DS replication

Create and manage AD DS security principals

- Create and manage AD DS users and groups
- Manage users and groups in multi-domain and multi-forest scenarios
- Choose a service account type
- Implement service accounts
- Join Windows Servers to AD DS, Microsoft Entra Domain Services, and Microsoft Entra

Implement and manage hybrid identities

- Integrate Microsoft Entra ID, AD DS and Microsoft Entra Domain Services

- Implement and manage Microsoft Entra Connect Sync
- Implement and manage Microsoft Entra Cloud Sync
- Implement and manage Microsoft Entra Domain Services
- Implement and manage Microsoft Entra Connect Health
- Manage authentication in on-premises and hybrid environments
- Enable staged rollout features

Manage Windows Server by using domain-based Group Policies

- Implement Group Policy in AD DS
- Implement Group Policy Preferences in AD DS
- Implement Group Policy in Microsoft Entra Domain Services

Manage Windows Servers and workloads in a hybrid environment (10–15%)

Configure remote management for Windows Servers in a hybrid environment

- Implement Windows Admin Center on premises and in Azure
- Configure PowerShell remoting, including second hop
- Configure Just Enough Administration (JEA) for PowerShell remoting
- Configure and manage remote SSH access
- Configure and manage Remote Desktop Protocol (RDP) access

Manage Windows Servers and workloads by using Azure services

- Install the Azure Connected Machine Agent to support Azure Arc
- Implement Azure Machine Configuration
- Deploy Azure services using VM extensions on Azure Arc-enabled servers
- Manage updates by using Azure Update Manager

- Implement Azure Automation for hybrid workloads
- Create Azure Automation runbooks

Manage virtual machines and containers (15–20%)

Manage Hyper-V and guest virtual machines

- Enable Enhanced session mode
- Manage VMs using PowerShell remoting, PowerShell Direct and Secure Shell (SSH) Direct for Linux VMs
- Enable nested virtualization
- Configure VM memory
- Configure integration services
- Configure Discrete Device Assignment
- Configure GPU partitioning
- Configure VM resource groups, CPU groups, and hypervisor scheduling types
- Manage VM checkpoints
- Implement high availability for Hyper-V virtual machines
- Manage Hyper-V virtual hard disks
- Configure Hyper-V Network Adapter
- Configure network interface card (NIC) Teaming on the Hyper-V host and virtual machine
- Configure Hyper-V Switch
- Configure a guarded fabric and shielded VMs
- Move secure virtual machines between Hyper-V hosts

Create and manage containers

- Prepare Windows Server as a container host
- Configure Windows subsystem for Linux to support containers for running Linux

- Create Windows Server container images
- Manage Windows Server container images
- Configure container networking
- Manage container instances
- Configure Azure Kubernetes Service (AKS) on Windows Server

Manage Windows Server virtual machines on Azure

- Manage storage for Windows Server virtual machines on Azure
- Manage capacity, including resizing and VM scale sets
- Manage availability sets and availability zones
- Configure and manage Just in Time (JIT) VM access and Azure Bastion
- Manage Azure VM network configuration

Implement and manage an on-premises and hybrid networking infrastructure (15–20%)

Implement on-premises and hybrid name resolution

- Integrate DNS with AD DS
- Create and manage DNS zones and records
- Configure DNS forwarding and conditional forwarding
- Integrate Windows Server DNS with Azure Public DNS, Azure Private DNS, and Azure DNS Private Resolver
- Implement Windows Server DNS policies
- Implement Domain Name System Security Extensions (DNSSEC)

Manage IP addressing in on-premises and hybrid scenarios

- Implement and manage IP Address Management (IPAM)
- Implement and configure the Dynamic Host Configuration protocol (DHCP) server role

- Resolve IP address issues in hybrid environments
- Create and manage DHCP scopes
- Create and manage IP reservations
- Implement DHCP high availability

Implement on-premises and hybrid network connectivity

- Implement and manage the Remote Access role
- Implement and manage Azure Network Adapter
- Implement and manage Azure extended network
- Implement and manage the Network Policy and Access Services role
- Implement Web Application Proxy
- Implement site-to-site VPN
- Implement Azure Relay
- Implement Microsoft Entra Private Access
- Implement Microsoft Entra Application Proxy

Manage storage and file services (15–20%)

Configure and manage Azure Files

- Create and manage Azure File Shares
- Manage permissions for Azure File Shares
- Configure and manage Azure File Sync
- Monitor File Sync
- Migrate Distributed File System (DFS) to Azure File Sync

Configure and manage Windows Server file shares

- Configure Windows Server file share access

- Configure file server resource manager (FSRM)
- Configure BranchCache
- Implement and configure Distributed File System (DFS)
- Configure and manage Server Message Block (SMB) over QUIC
- Configure and manage Server Message Block (SMB) options

Configure Windows Server storage

- Configure disks and volumes
- Configure and manage Storage Spaces
- Configure and manage Storage Replica
- Configure Data Deduplication
- Configure Server Message Block (SMB) direct
- Configure Storage QoS
- Configure file systems
- Configure and manage iSCSI

Study guide for Exam AZ-801: Configuring Windows Server Hybrid Advanced Services

10/02/2025

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English

version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of October 6, 2025

Audience profile

As a candidate for this exam, you're responsible for administering Windows Server as a workload in both on-premises and hybrid environments.

In this role, you deploy, implement, manage, and troubleshoot Windows Server in Azure as well as migrating and deploying workloads to Azure. You administer on- identity, security, management, compute, networking, storage, monitoring, high availability, and disaster recovery for Windows Server. You typically collaborate with architects, administrators, and engineers.

You use administrative tools and technologies such as Windows Admin Center, PowerShell, Azure Arc, Azure Policy, Azure Monitor, Azure Update Manager, Microsoft Defender for Identity, Microsoft Defender for Cloud, and IaaS virtual machine (VM) administration.

As a candidate for this exam, you should have several years of experience with Windows Server operating systems.

Skills at a glance

- Secure Windows Server on-premises and hybrid infrastructures (25–30%)
- Implement and manage Windows Server high availability (15–20%)

- Implement disaster recovery (10–15%)
- Migrate servers and workloads (20–25%)
- Monitor and troubleshoot Windows Server environments (15–20%)

Secure Windows Server on-premises and hybrid infrastructures (25–30%)

Secure Windows Server operating system

- Configure and manage Exploit Protection
- Configure and manage Windows Defender Application Control
- Configure and manage Windows Defender Credential Guard
- Configure SmartScreen
- Implement operating system security by using Group Policies
- Manage Windows Server security baseline by using OSConfig
- Implement Windows Local Administrator Password Solution (Windows LAPS)

Secure a hybrid Active Directory infrastructure

- Configure password policies
- Implement Microsoft Entra Password Protection for AD DS
- Manage protected users
- Manage account security on a Read-Only Domain controller (RODC)
- Harden domain controllers
- Configure authentication policy silos
- Restrict access to domain controllers
- Configure security options for user accounts
- Configure security options for built-in administrative groups
- Manage AD delegation

- Implement and manage Microsoft Defender for Identity
- Audit usage of and disable NTLM

Identify and remediate Windows Server security issues by using Azure services

- Implement ingestion of Windows Server data into Microsoft Sentinel
- Manage security for Windows Server by using Microsoft Defender for Cloud
- Manage security for Windows Server by using Microsoft Defender for Servers

Secure Windows Server networking

- Manage Windows Defender Firewall
- Implement domain isolation
- Implement connection security rules
- Create and configure network security groups (NSGs) for Windows Server virtual machines on Azure

Secure Windows Server storage

- Manage Windows BitLocker Drive Encryption
- Enable storage encryption by using Azure Disk Encryption
- Manage and recover encrypted volumes
- Manage disk encryption keys for IaaS virtual machines

Implement and manage Windows Server high availability (15–20%)

Implement a Windows Server failover cluster

- Implement a failover cluster on-premises, hybrid, or cloud-only
- Create a Windows failover cluster, including workgroup clusters

- Implement a stretch cluster across datacenters or Azure regions, including Storage Spaces Direct (S2D) campus clusters
- Configure storage for failover clustering
- Modify quorum options
- Configure network adapters for failover clustering
- Deploy host networking with Network ATC
- Configure cluster workload options
- Configure Scale-Out File servers
- Configure an Azure witness
- Configure a floating IP address for the cluster

Manage failover clustering

- Implement cluster-aware updating
- Recover a failed cluster node
- Upgrade failover cluster nodes
- Failover workloads between nodes
- Install Windows updates on cluster nodes
- Manage failover clusters using Windows Admin Center

Implement and manage Storage Spaces Direct

- Upgrade an S2D node
- Implement networking for S2D
- Configure S2D

Implement disaster recovery (10–15%)

Manage backup and recovery for Windows Server

- Back up and restore files and folders to Azure Recovery Services Vault

- Deploy and manage Azure Backup Server
- Back up and recover using Azure Backup Server
- Manage backups in Azure Recovery Services Vault
- Create an Azure Recovery Services vault backup policy
- Configure backup for Azure VM using the built-in backup agent
- Recover a VM using instant recovery snapshots
- Recover VMs to new Azure VMs
- Restore a VM, including encrypted VMs

Implement disaster recovery by using Azure Site Recovery

- Configure Azure Site Recovery network mapping
- Configure Site Recovery for on-premises servers
- Configure a recovery plan in Azure Site Recovery
- Configure Site Recovery for Azure VMs
- Implement VM replication to secondary datacenter or Azure region
- Configure Azure Site Recovery replication policies

Protect virtual machines by using Hyper-V replicas

- Configure Hyper-V hosts for replication
- Manage Hyper-V replica servers
- Configure VM replication
- Perform a failover

Migrate servers and workloads (20–25%)

Migrate on-premises storage to on-premises servers or Azure

- Transfer files, file shares, and security configurations by using Storage Migration Service (SMS)

- Cut over to a new server by using Storage Migration Service (SMS)
- Use Storage Migration Service to migrate to Azure VMs
- Migrate to Azure file shares

Migrate on-premises servers by using Azure Migrate

- Deploy and configure Azure Migrate appliance
- Migrate VM workloads to Azure VMs
- Migrate physical servers to Azure VMs

Migrate workloads from previous Windows Server versions to the most current version

- Choose an appropriate migration method
- Migrate IIS workloads and configurations
- Migrate Hyper-V hosts
- Migrate Remote Desktop Services (RDS) host servers
- Migrate Dynamic Host Configuration Protocol (DHCP) servers
- Migrate print servers
- Migrate by using an in-place upgrade

Migrate IIS workloads to Azure

- Assess IIS workloads by using Azure Migrate
- Migrate IIS workloads to Azure Web Apps
- Migrate IIS workloads to containers

Migrate an on-premises AD forest to Windows Server 2025

- Choose an appropriate migration method
- Implement a forest restructure

- Migrate AD DS objects, including users, groups and Group Policies using AD Migration Tool
- Migrate to a new Active Directory forest
- Upgrade an existing forest, including setting functional levels

Monitor and troubleshoot Windows Server environments (15–20%)

Monitor Windows Server by using Windows Server tools and Azure services

- Monitor Windows Server by using Performance Monitor
- Create and configure Data Collector Sets
- Monitor servers and configure alerts by using Windows Admin Center
- Analyze Windows Server system data by using System Insights
- Manage event logs
- Configure data collection rules for Azure Monitor
- Create alerts
- Monitor Azure VM performance by using VM Insights

Troubleshoot Windows Server issues

- Troubleshoot connectivity
- Troubleshoot name resolution
- Troubleshoot Windows Update
- Troubleshoot Time Service
- Troubleshoot deployment failures
- Troubleshoot booting failures
- Troubleshoot performance issues
- Troubleshoot VM and Azure Arc extension issues

- Troubleshoot disk encryption issues
- Troubleshoot storage

Troubleshoot Active Directory

- Restore objects from AD recycle bin
- Recover Active Directory database using Directory Services Restore mode
- Recover system volume (SYSVOL)
- Troubleshoot Active Directory replication
- Troubleshoot hybrid authentication and synchronization issues
- Troubleshoot on-premises Active Directory

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 20, 2026

Audience profile

As a candidate for this exam, you're a technology professional who wants to demonstrate foundational knowledge of cloud concepts in general and Microsoft Azure in particular. This exam is a common starting point in a journey towards a career in Azure.

You can describe Azure architectural components and Azure services, such as:

- Compute
- Networking
- Storage

You can also describe features and tools to secure, govern, and administer Azure.

You should have skills and experience working with an area of IT, such as:

- Infrastructure management
- Database management
- Software development

Skills at a glance

- Describe cloud concepts (25–30%)
- Describe Azure architecture and services (35–40%)
- Describe Azure management and governance (30–35%)

Describe cloud concepts (25–30%)

Describe cloud computing

- Define cloud computing
- Describe the shared responsibility model
- Define cloud models, including public, private, and hybrid
- Identify appropriate use cases for each cloud model
- Describe the consumption-based model
- Compare cloud pricing models
- Describe serverless

Describe the benefits of using cloud services

- Describe the benefits of high availability and scalability in the cloud
- Describe the benefits of reliability and predictability in the cloud
- Describe the benefits of security and governance in the cloud
- Describe the benefits of manageability in the cloud

Describe cloud service types

- Describe infrastructure as a service (IaaS)
- Describe platform as a service (PaaS)
- Describe software as a service (SaaS)
- Identify appropriate use cases for each cloud service type (IaaS, PaaS, and SaaS)

Describe Azure architecture and services (35–40%)

Describe the core architectural components of Azure

- Describe Azure regions, region pairs, and sovereign regions
- Describe availability zones
- Describe Azure datacenters

- Describe Azure resources and resource groups
- Describe subscriptions
- Describe management groups
- Describe the hierarchy of resource groups, subscriptions, and management groups

Describe Azure compute and networking services

- Compare compute types, including containers, virtual machines, and functions
- Describe virtual machine options, including Azure virtual machines, Azure Virtual Machine Scale Sets, availability sets, and Azure Virtual Desktop
- Describe the resources required for virtual machines
- Describe application hosting options, including web apps, containers, and virtual machines
- Describe virtual networking, including the purpose of Azure virtual networks, subnets, peering, Azure DNS, Azure VPN Gateway, and ExpressRoute
- Define public and private endpoints

Describe Azure storage services

- Compare Azure Storage services
- Describe storage tiers
- Describe redundancy options
- Describe storage account options and storage types
- Identify options for moving files, including AzCopy, Azure Storage Explorer, and Azure File Sync
- Describe migration options, including Azure Migrate and Azure Data Box

Describe Azure identity, access, and security

- Describe directory services in Azure, including Microsoft Entra ID and Microsoft Entra Domain Services

- Describe authentication methods in Azure, including single sign-on (SSO), multifactor authentication (MFA), and passwordless
- Describe external identities in Azure
- Describe Microsoft Entra Conditional Access
- Describe Azure role-based access control (RBAC)
- Describe the concept of Zero Trust
- Describe the purpose of the defense-in-depth model
- Describe the purpose of Microsoft Defender for Cloud

Describe Azure management and governance (30–35%)

Describe cost management in Azure

- Describe factors that can affect costs in Azure
- Explore the pricing calculator
- Describe cost management capabilities in Azure
- Describe the purpose of tags

Describe features and tools in Azure for governance and compliance

- Describe the purpose of Microsoft Purview in Azure
- Describe the purpose of Azure Policy
- Describe the purpose of resource locks

Describe features and tools for managing and deploying Azure resources

- Describe the Azure portal
- Describe Azure Cloud Shell, Azure CLI, and Azure PowerShell
- Describe the purpose of Azure Arc
- Describe infrastructure as code (IaC)

- Describe Azure Resource Manager (ARM) and ARM templates

Describe monitoring tools in Azure

- Describe the purpose of Azure Advisor
- Describe Azure Service Health
- Describe Azure Monitor, including Log Analytics, Azure Monitor alerts, and Azure Monitor Application Insights

Skills measured as of April 11, 2025

Audience profile

As a candidate for this exam, you should have subject matter expertise in applying data science and machine learning to implement and run machine learning workloads on Azure. Additionally, you should have knowledge of optimizing language models for AI applications using Azure AI.

Your responsibilities for this role include:

- Designing and creating a suitable working environment for data science workloads.
- Exploring data.
- Training machine learning models.
- Implementing pipelines.
- Running jobs to prepare for production.
- Managing, deploying, and monitoring scalable machine learning solutions.
- Using language models for building AI applications.

As a candidate for this exam, you should have knowledge and experience in data science by using:

- Azure Machine Learning
- MLflow
- Azure AI services, including Azure AI Search
- Azure AI Foundry

Skills at a glance

- Design and prepare a machine learning solution (20–25%)
- Explore data, and run experiments (20–25%)
- Train and deploy models (25–30%)
- Optimize language models for AI applications (25–30%)

Design and prepare a machine learning solution (20–25%)

Design a machine learning solution

- Identify the structure and format for datasets
- Determine the compute specifications for machine learning workload
- Select the development approach to train a model

Create and manage resources in an Azure Machine Learning workspace

- Create and manage a workspace
- Create and manage datastores
- Create and manage compute targets
- Set up Git integration for source control

Create and manage assets in an Azure Machine Learning workspace

- Create and manage data assets
- Create and manage environments

- Share assets across workspaces by using registries

Explore data, and run experiments (20–25%)

Use automated machine learning to explore optimal models

- Use automated machine learning for tabular data
- Use automated machine learning for computer vision
- Use automated machine learning for natural language processing
- Select and understand training options, including preprocessing and algorithms
- Evaluate an automated machine learning run, including responsible AI guidelines

Use notebooks for custom model training

- Use the terminal to configure a compute instance
- Access and wrangle data in notebooks
- Wrangle data interactively with attached Synapse Spark pools and serverless Spark compute
- Retrieve features from a feature store to train a model
- Track model training by using MLflow
- Evaluate a model, including responsible AI guidelines

Automate hyperparameter tuning

- Select a sampling method
- Define the search space
- Define the primary metric
- Define early termination options

Train and deploy models (25–30%)

Run model training scripts

- Consume data in a job
- Configure compute for a job run
- Configure an environment for a job run
- Track model training with MLflow in a job run
- Define parameters for a job
- Run a script as a job
- Use logs to troubleshoot job run errors

Implement training pipelines

- Create custom components
- Create a pipeline
- Pass data between steps in a pipeline
- Run and schedule a pipeline
- Monitor and troubleshoot pipeline runs

Manage models

- Define the signature in the MLmodel file
- Package a feature retrieval specification with the model artifact
- Register an MLflow model
- Assess a model by using responsible AI principles

Deploy a model

- Configure settings for online deployment
- Deploy a model to an online endpoint
- Test an online deployed service
- Configure compute for a batch deployment
- Deploy a model to a batch endpoint

- Invoke the batch endpoint to start a batch scoring job

Optimize language models for AI applications (25–30%)

Prepare for model optimization

- Select and deploy a language model from the model catalog
- Compare language models using benchmarks
- Test a deployed language model in the playground
- Select an optimization approach

Optimize through prompt engineering and prompt flow

- Test prompts with manual evaluation
- Define and track prompt variants
- Create prompt templates
- Define chaining logic with the prompt flow SDK
- Use tracing to evaluate your flow

Optimize through Retrieval Augmented Generation (RAG)

- Prepare data for RAG, including cleaning, chunking, and embedding
- Configure a vector store
- Configure an Azure AI Search-based index store
- Evaluate your RAG solution

Optimize through fine-tuning

- Prepare data for fine-tuning
- Select an appropriate base model
- Run a fine-tuning job
- Evaluate your fine-tuned model

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of October 24, 2024

Audience profile

As a candidate for this exam, you should have subject matter expertise in integrating, transforming, and consolidating data from various structured, unstructured, and streaming data systems into a suitable schema for building analytics solutions.

As an Azure data engineer, you help stakeholders understand the data through exploration, and build and maintain secure and compliant data processing pipelines by using different tools and techniques. You use various Azure data services and frameworks to store and produce cleansed and enhanced datasets for analysis. This data store can be designed with different architecture patterns based on business requirements, including:

- Modern data warehouse (MDW)
- Big data
- Lakehouse architecture

As an Azure data engineer, you also help to ensure that the operationalization of data pipelines and data stores are high-performing, efficient, organized, and reliable, given a set of business requirements and constraints. You help to identify and troubleshoot

operational and data quality issues. You also design, implement, monitor, and optimize data platforms to meet the data pipelines.

As a candidate for this exam, you must have solid knowledge of data processing languages, including:

- SQL
- Python
- Scala

You need to understand parallel processing and data architecture patterns. You should be proficient in using the following to create data processing solutions:

- Azure Data Factory
- Azure Synapse Analytics
- Azure Stream Analytics
- Azure Event Hubs
- Azure Data Lake Storage
- Azure Databricks

Skills at a glance

- Design and implement data storage (15–20%)
- Develop data processing (40–45%)
- Secure, monitor, and optimize data storage and data processing (30–35%)

Design and implement data storage (15–20%)

Implement a partition strategy

- Implement a partition strategy for files
- Implement a partition strategy for analytical workloads
- Implement a partition strategy for streaming workloads
- Implement a partition strategy for Azure Synapse Analytics

- Identify when partitioning is needed in Azure Data Lake Storage Gen2

Design and implement the data exploration layer

- Create and execute queries by using a compute solution that leverages SQL serverless and Spark clusters
- Recommend and implement Azure Synapse Analytics database templates
- Push new or updated data lineage to Microsoft Purview
- Browse and search metadata in Microsoft Purview Data Catalog

Develop data processing (40–45%)

Ingest and transform data

- Design and implement incremental data loads
- Transform data by using Apache Spark
- Transform data by using Transact-SQL (T-SQL) in Azure Synapse Analytics
- Ingest and transform data by using Azure Synapse Pipelines or Azure Data Factory
- Transform data by using Azure Stream Analytics
- Cleanse data
- Handle duplicate data
- Avoiding duplicate data by using Azure Stream Analytics Exactly Once Delivery
- Handle missing data
- Handle late-arriving data
- Split data
- Shred JSON
- Encode and decode data
- Configure error handling for a transformation
- Normalize and denormalize data

- Perform data exploratory analysis

Develop a batch processing solution

- Develop batch processing solutions by using Azure Data Lake Storage Gen2, Azure Databricks, Azure Synapse Analytics, and Azure Data Factory
- Use PolyBase to load data to a SQL pool
- Implement Azure Synapse Link and query the replicated data
- Create data pipelines
- Scale resources
- Configure the batch size
- Create tests for data pipelines
- Integrate Jupyter or Python notebooks into a data pipeline
- Upsert batch data
- Revert data to a previous state
- Configure exception handling
- Configure batch retention
- Read from and write to a delta lake

Develop a stream processing solution

- Create a stream processing solution by using Stream Analytics and Azure Event Hubs
- Process data by using Spark structured streaming
- Create windowed aggregates
- Handle schema drift
- Process time series data
- Process data across partitions
- Process within one partition

- Configure checkpoints and watermarking during processing
- Scale resources
- Create tests for data pipelines
- Optimize pipelines for analytical or transactional purposes
- Handle interruptions
- Configure exception handling
- Upsert stream data
- Replay archived stream data
- Read from and write to a delta lake

Manage batches and pipelines

- Trigger batches
- Handle failed batch loads
- Validate batch loads
- Manage data pipelines in Azure Data Factory or Azure Synapse Pipelines
- Schedule data pipelines in Data Factory or Azure Synapse Pipelines
- Implement version control for pipeline artifacts
- Manage Spark jobs in a pipeline

Secure, monitor, and optimize data storage and data processing (30–35%)

Implement data security

- Implement data masking
- Encrypt data at rest and in motion
- Implement row-level and column-level security
- Implement Azure role-based access control (RBAC)

- Implement POSIX-like access control lists (ACLs) for Data Lake Storage Gen2
- Implement a data retention policy
- Implement secure endpoints (private and public)
- Implement resource tokens in Azure Databricks
- Load a DataFrame with sensitive information
- Write encrypted data to tables or Parquet files
- Manage sensitive information

Monitor data storage and data processing

- Implement logging used by Azure Monitor
- Configure monitoring services
- Monitor stream processing
- Measure performance of data movement
- Monitor and update statistics about data across a system
- Monitor data pipeline performance
- Measure query performance
- Schedule and monitor pipeline tests
- Interpret Azure Monitor metrics and logs
- Implement a pipeline alert strategy

Optimize and troubleshoot data storage and data processing

- Compact small files
- Handle skew in data
- Handle data spill
- Optimize resource management
- Tune queries by using indexers

- Tune queries by using cache
- Troubleshoot a failed Spark job
- Troubleshoot a failed pipeline run, including activities executed in external services

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. Although Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam**

Details webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of April 24, 2026

Audience profile

As a candidate for this exam, you should have subject matter expertise in building database solutions that are designed to support multiple workloads built with:

- Azure SQL services
- SQL Server on-premises

You're a database administrator who manages cloud and on-premises databases built with Azure SQL services and SQL Server.

As the Azure database administrator, you implement and manage the operational aspects of cloud-native and hybrid data platform solutions built on Azure SQL services and SQL Server. You use a variety of methods and tools to perform and automate day-to-day operations, including applying knowledge of using Transact-SQL (T-SQL) and other tools for administrative management purposes.

You're responsible for the following concerning database solutions:

- Management
- Availability
- Security
- Performance monitoring and optimization

You evaluate and implement migration strategies for moving databases between Azure and on-premises. Plus, you work with Azure data engineers, Azure solution architects, Azure developers, data scientists, and other professionals to manage operational aspects of data platform solutions.

As a candidate for this exam, you should have knowledge of and experience with:

- Azure SQL Database
- Azure SQL Managed Instance
- SQL Server on Azure Virtual Machines (Windows and Linux)
- SQL Server on-premises

Skills at a glance

- Plan and implement data platform resources (15–20%)
- Implement a secure environment (20–25%)
- Monitor, configure, and optimize database resources (20–25%)
- Configure and manage automation of tasks (15–20%)
- Plan and configure a high availability and disaster recovery (HA/DR) environment (20–25%)

Plan and implement data platform resources (15–20%)

Plan and deploy Azure SQL solutions

- Recommend a database offering based on specific requirements
- Choose an automated deployment method
- Identify use cases for Azure Arc-enabled SQL services
- Identify use cases for Azure SQL Database in Microsoft Fabric
- Plan for table partitioning
- Recommend a database sharding solution
- Deploy database offerings on selected platforms

- Deploy hybrid SQL Server solutions
- Apply patches and updates for hybrid and infrastructure as a service (IaaS) deployment

Configure resources for scale and performance

- Configure Azure SQL Database for scale and performance
- Configure Azure SQL Managed Instance for scale and performance
- Configure SQL Server on Azure Virtual Machines for scale and performance
- Configure table partitioning
- Configure data compression

Plan and implement a migration strategy

- Evaluate requirements for a migration
- Evaluate offline or online migration strategies
- Implement an online migration strategy
- Implement an offline migration strategy
- Implement a migration to Azure
- Implement a migration between Azure SQL services
- Implement Azure SQL Managed Instance database copy and move
- Troubleshoot a migration

Implement a secure environment (20–25%)

Configure database authentication and authorization

- Configure Microsoft Entra ID authentication for Azure SQL Database, Azure SQL Managed Instance, and SQL Server
- Configure authentication for SQL on Azure VMs and Azure SQL Managed Instance
- Configure security principals
- Create users from Microsoft Entra identities

- Configure database and object-level permissions using graphical tools
- Apply the principle of least privilege for all securables
- Troubleshoot authentication and authorization issues
- Manage authentication and authorization by using T-SQL

Implement security for data at rest and data in transit

- Implement transparent data encryption (TDE)
- Implement object-level encryption
- Configure server- and database-level firewall rules
- Implement Always Encrypted
- Implement Always Encrypted with VBS enclaves
- Configure private links and service endpoints

Implement compliance controls for sensitive data

- Apply a data classification strategy
- Configure server and database audits
- Implement change data tracking
- Implement dynamic data masking
- Implement ledger in Azure SQL
- Implement row-level security

Monitor, configure, and optimize database resources (20–25%)

Monitor resource activity and performance

- Prepare an operational performance baseline
- Determine sources for performance metrics

- Interpret performance metrics
- Configure and monitor activity and performance
- Monitor by using database watcher
- Monitor by using Extended Events

Monitor and optimize query performance

- Configure Query Store
- Monitor by using Query Store
- Identify and resolve session blocking
- Identify performance issues using dynamic management views (DMVs)
- Identify and implement index changes for queries
- Recommend query construct modifications based on resource usage
- Review execution plans
- Monitor by using Intelligent Insights

Configure database solutions for optimal performance

- Implement index maintenance tasks
- Implement statistics maintenance tasks
- Implement database integrity checks
- Configure database automatic tuning
- Configure server settings for performance
- Configure Resource Governor for performance
- Implement database-scoped configuration
- Configure compute and storage resources for scaling
- Identify use cases for intelligent query processing (IQP) features

Configure and manage automation of tasks (15–20%)

Create and manage SQL Server Agent jobs

- Manage schedules for regular maintenance jobs
- Configure job alerts and notifications
- Troubleshoot SQL Server Agent jobs

Automate deployment of database resources

- Automate deployment by using Azure Resource Manager (ARM) and Bicep templates
- Automate deployment by using Azure PowerShell
- Automate deployment by using Azure CLI
- Monitor and troubleshoot deployments

Create and manage database tasks in Azure

- Create and configure elastic jobs
- Create and configure database tasks by using automation
- Configure alerts and notifications on database tasks
- Troubleshoot automated database tasks

Plan and configure a high availability and disaster recovery (HA/DR) environment (20–25%)

Plan an HA/DR strategy for database solutions

- Recommend HA/DR strategy based on Recovery Point Objective/Recovery Time Objective (RPO/RTO) requirements
- Evaluate HA/DR for hybrid deployments
- Evaluate Azure-specific HA/DR solutions
- Plan a testing procedure for an HA/DR solution

Plan and perform backup and restore of a database

- Recommend a database backup and restore strategy
- Perform a database backup by using native tools
- Perform a database restore by using native tools
- Perform a database restore to a point in time
- Configure long-term backup retention
- Backup and restore a database by using T-SQL
- Backup to and restore from cloud storage

Configure HA/DR for database solutions

- Configure active geo-replication
- Configure Always On availability groups on SQL Managed Instance and Azure virtual machines
- Configure failover groups
- Configure Always On Failover Cluster Instances on Azure virtual machines
- Configure log shipping
- Monitor an HA/DR solution
- Troubleshoot an HA/DR solution

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of April 20, 2026

Audience profile

As a candidate for this exam, you should have subject matter expertise designing, implementing, and monitoring cloud-native applications that store and manage data.

Your responsibilities for this role include:

- Designing and implementing data models and data distribution.
- Loading data into an Azure Cosmos DB database.
- Optimizing and maintaining the solution.

As a professional in this role, you integrate the solution with other Azure services. You also design, implement, and monitor solutions that consider security, availability, resilience, and performance requirements.

As a candidate for this exam, you must have solid knowledge and experience with:

- Developing apps for Azure.
- Working with Azure Cosmos DB database technologies.
- Creating server-side objects with JavaScript.

You should be proficient at developing applications that use the Azure Cosmos DB for NoSQL API. You should be able to:

- Write efficient SQL queries for the API.
- Create appropriate indexing policies.
- Interpret JSON.
- Read C# or Java code.
- Use PowerShell.

Additionally, you should be familiar with provisioning and managing resources in Azure.

Skills at a glance

- Design and implement data models (35–40%)
- Design and implement data distribution (5–10%)
- Integrate an Azure Cosmos DB solution (5–10%)
- Optimize an Azure Cosmos DB solution (15–20%)
- Maintain an Azure Cosmos DB solution (25–30%)

Design and implement data models (35–40%)

Design and implement a non-relational data model for Azure Cosmos DB for NoSQL

- Develop a design by storing multiple entity types in the same container
- Develop a design by storing multiple related entities in the same document
- Develop a model that denormalizes data across documents
- Develop a design by referencing between documents
- Identify partition key, id, and unique keys
- Identify data and associated access patterns
- Specify a default time to live (TTL) on a container for a transactional store
- Develop a design for versioning documents
- Develop a design for document schema versioning

Design a data partitioning strategy for Azure Cosmos DB for NoSQL

- Choose a partitioning strategy based on a specific workload
- Choose a partition key
- Plan for transactions when choosing a partition key
- Evaluate the cost of using a cross-partition query
- Calculate and evaluate data distribution based on partition key selection
- Calculate and evaluate throughput distribution based on partition key selection
- Construct and implement a synthetic partition key
- Design and implement a hierarchical partition key
- Design partitioning for workloads that require multiple partition keys

Plan and implement sizing and scaling for a database created with Azure Cosmos DB

- Evaluate the throughput and data storage requirements for a specific workload
- Choose between serverless, provisioned and free tier
- Choose when to use database-level provisioned throughput
- Design for granular scale units and resource governance
- Evaluate the cost of the global distribution of data
- Configure throughput for Azure Cosmos DB by using the Azure portal

Implement client connectivity options in the Azure Cosmos DB SDK

- Choose a connectivity mode (gateway versus direct)
- Implement a connectivity mode
- Create a connection to a database
- Enable offline development by using the Azure Cosmos DB emulator
- Handle connection errors

- Implement a singleton for the client
- Specify a region for global distribution
- Configure client-side threading and parallelism options
- Enable SDK logging

Implement data access by using the SQL language for Azure Cosmos DB for NoSQL

- Implement queries that use arrays, nested objects, aggregation, and ordering
- Implement a correlated subquery
- Implement queries that use array and type-checking functions
- Implement queries that use mathematical, string, and date functions
- Implement queries based on variable data

Implement data access by using Azure Cosmos DB for NoSQL SDKs

- Choose when to use a point operation versus a query operation
- Implement a point operation that creates, updates, and deletes items
- Implement an update by using a patch operation
- Manage multi-item transactions using SDK Transactional Batch
- Perform a multi-item load using Bulk Support in the SDK
- Implement optimistic concurrency control using ETags
- Override default consistency by using query request options
- Implement session consistency by using session tokens
- Implement a query operation that includes pagination
- Implement a query operation by using a continuation token
- Handle transient errors and 429s
- Specify TTL for an item

- Retrieve and use query metrics

Implement server-side programming in Azure Cosmos DB for NoSQL by using JavaScript

- Write, deploy, and call a stored procedure
- Design stored procedures to work with multiple items within the same logical partition transactionally
- Implement and call triggers
- Implement a user-defined function

Design and implement data distribution (5–10%)

Design and implement a replication strategy for Azure Cosmos DB

- Choose when to distribute data
- Define automatic failover policies for regional failure for Azure Cosmos DB for NoSQL
- Perform manual failovers to move single master write regions
- Choose a consistency model
- Identify use cases for different consistency models
- Evaluate the impact of consistency model choices on availability and associated request unit (RU) cost
- Evaluate the impact of consistency model choices on performance and latency
- Specify application connections to replicated data

Design and implement multi-region writes

- Choose when to use multi-region writes
- Implement multi-region writes
- Implement a custom conflict resolution policy for Azure Cosmos DB for NoSQL

Integrate an Azure Cosmos DB solution (5–10%)

Enable Azure Cosmos DB analytical workloads

- Configure Azure Cosmos DB Mirroring for Microsoft Fabric
- Choose between Azure Cosmos DB Mirroring and the Azure Cosmos DB Spark connector
- Enable the analytical store on a container
- Enable a connection to an analytical store and query from Azure Synapse Spark or Azure Synapse SQL
- Perform a query against the transactional store from Spark
- Write data back to the transactional store from Spark
- Implement Change Data Capture in the Azure Cosmos DB analytical store
- Implement time travel in Warehouse in Microsoft Fabric

Implement solutions across services

- Integrate events with other applications by using Azure Functions and Azure Event Hubs
- Denormalize data by using Change Feed and Azure Functions
- Enforce referential integrity by using Change Feed and Azure Functions
- Aggregate data by using Change Feed and Azure Functions, including reporting
- Archive data by using Change Feed and Azure Functions
- Implement Azure AI Search for an Azure Cosmos DB solution

Optimize an Azure Cosmos DB solution (15–20%)

Optimize query performance when using the API for Azure Cosmos DB for NoSQL

- Adjust indexes on the database
- Calculate the cost of the query
- Retrieve request unit cost of a point operation or query
- Implement Azure Cosmos DB integrated cache

Design and implement change feeds for Azure Cosmos DB for NoSQL

- Develop an Azure Functions trigger to process a change feed
- Consume a change feed from within an application by using the SDK
- Manage the number of change feed instances by using the change feed estimator
- Implement denormalization by using a change feed
- Implement referential enforcement by using a change feed
- Implement aggregation persistence by using a change feed
- Implement data archiving by using a change feed

Define and implement an indexing strategy for Azure Cosmos DB for NoSQL

- Choose when to use a read-heavy versus write-heavy index strategy
- Choose an appropriate index type
- Configure a custom indexing policy by using the Azure portal
- Implement a composite index
- Optimize index performance

Maintain an Azure Cosmos DB solution (25–30%)

Monitor and troubleshoot an Azure Cosmos DB solution

- Evaluate response status code and failure metrics
- Monitor the Normalized RU Consumption metric by using Azure Monitor
- Monitor server-side latency metrics by using Azure Monitor
- Monitor data replication in relation to latency and availability
- Configure Azure Monitor alerts for Azure Cosmos DB
- Implement and query Azure Monitor resource logs for Azure Cosmos DB
- Monitor throughput across partitions

- Monitor distribution of data across partitions
- Monitor security by using logging and auditing

Implement backup and restore for an Azure Cosmos DB solution

- Choose between periodic and continuous backup
- Configure periodic backup
- Configure continuous backup and point-in-time restore
- Locate a restore point for a point-in-time restore
- Restore a database or container from a restore point

Implement security for an Azure Cosmos DB solution

- Choose between service-managed and customer-managed encryption keys
- Configure network-level access control for Azure Cosmos DB
- Configure data encryption for Azure Cosmos DB
- Manage control plane access to Azure Cosmos DB by using Azure role-based access control (RBAC)
- Manage control plane access to Azure Cosmos DB Data Explorer by using Azure role-based access control (RBAC)
- Manage data plane access to Azure Cosmos DB by using Microsoft Entra ID
- Configure cross-origin resource sharing (CORS) settings
- Manage account keys by using Azure Key Vault
- Implement customer-managed keys for encryption
- Implement Always Encrypted

Implement data movement for an Azure Cosmos DB solution

- Choose a data movement strategy
- Move data by using client SDK bulk operations

- Move data by using Azure Data Factory and Azure Synapse pipelines
- Move data by using a Kafka connector
- Move data by using Azure Stream Analytics
- Move data by using the Azure Cosmos DB Spark connector
- Configure Azure Cosmos DB as a custom endpoint for an Azure IoT Hub

Implement a DevOps process for an Azure Cosmos DB solution

- Choose when to use declarative versus imperative operations
- Provision and manage Azure Cosmos DB resources by using Azure Resource Manager templates
- Migrate between standard and autoscale throughput by using PowerShell or Azure CLI
- Initiate a regional failover by using PowerShell or Azure CLI
- Maintain indexing policies in production by using Azure Resource Manager templates

About the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't

available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 21, 2026

Audience profile

As a candidate for this exam, you should have subject matter expertise in designing, creating, and managing analytical assets, such as semantic models, warehouses, or lakehouses.

Your responsibilities for this role include:

- Prepare and enrich data for analysis
- Secure and maintain analytics assets
- Implement and manage semantic models

You work closely with stakeholders for business requirements and partner with architects, analysts, engineers, and administrators.

You should also be able to query and analyze data by using Structured Query Language (SQL), Kusto Query Language (KQL), and Data Analysis Expressions (DAX).

Skills at a glance

- Maintain a data analytics solution (25–30%)
- Prepare data (45–50%)
- Implement and manage semantic models (25–30%)

Maintain a data analytics solution (25–30%)

Implement security and governance

- Implement workspace-level access controls
- Implement item-level access controls
- Implement row-level, column-level, object-level, and file-level access control
- Apply sensitivity labels to items
- Endorse items

Maintain the analytics development lifecycle

- Configure version control for a workspace
- Create and manage a Power BI Desktop project (.pbip)
- Create and configure deployment pipelines
- Perform impact analysis of downstream dependencies from lakehouses, warehouses, dataflows, and semantic models
- Deploy and manage semantic models by using the XMLA endpoint
- Create and update reusable assets, including Power BI template (.pbit) files, Power BI data source (.pbids) files, and shared semantic models

Prepare data (45–50%)

Get data

- Create a data connection
- Discover data by using OneLake catalog and Real-Time hub
- Ingest or access data as needed
- Choose between different data stores
- Implement OneLake integration for Eventhouse and semantic models

Transform data

- Create views, functions, and stored procedures

- Enrich data by adding new columns or tables
- Implement a star schema for a lakehouse or warehouse
- Denormalize data
- Aggregate data
- Merge or join data
- Identify and resolve duplicate data, missing data, or null values
- Convert column data types
- Filter data

Query and analyze data

- Select, filter, and aggregate data by using the Visual Query Editor
- Select, filter, and aggregate data by using SQL
- Select, filter, and aggregate data by using KQL
- Select, filter, and aggregate data by using DAX

Implement and manage semantic models (25–30%)

Design and build semantic models

- Choose a storage mode
- Implement a star schema for a semantic model
- Implement relationships, such as bridge tables and many-to-many relationships
- Write calculations that use DAX variables and functions, such as iterators, table filtering, windowing, and information functions
- Implement calculation groups, dynamic format strings, and field parameters
- Identify use cases for and configure large semantic model storage format
- Design and build composite models

Optimize enterprise-scale semantic models

- Implement performance improvements in queries and report visuals
- Improve DAX performance
- Configure Direct Lake, including default fallback and refresh behavior
- Choose between Direct Lake on OneLake and Direct Lake on SQL analytics endpoint
- Implement incremental refresh for semantic models

Study resources

Skills measured as of July 21, 2026

Audience profile

As a candidate for this exam, you should have subject matter expertise with data loading patterns, data architectures, and orchestration processes. Your responsibilities for this role include:

- Ingesting and transforming data.
- Securing and managing an analytics solution.
- Monitoring and optimizing an analytics solution.

You work closely with analytics engineers, architects, analysts, and administrators to design and deploy data engineering solutions for analytics.

You should be skilled at manipulating and transforming data by using Structured Query Language (SQL), PySpark, and Kusto Query Language (KQL).

Skills at a glance

- Implement and manage an analytics solution (30–35%)
- Ingest and transform data (30–35%)
- Monitor and optimize an analytics solution (30–35%)

Implement and manage an analytics solution (30–35%)

Configure Microsoft Fabric workspace settings

- Configure Spark workspace settings
- Configure domain workspace settings

- Configure OneLake workspace settings
- Configure Apache Airflow workspace settings

Implement lifecycle management in Fabric

- Configure version control
- Implement database projects
- Create and configure deployment pipelines

Configure security and governance

- Implement workspace-level access controls
- Implement item-level access controls
- Implement row-level, column-level, object-level, and folder/file-level access controls
- Implement dynamic data masking
- Apply sensitivity labels to items
- Endorse items
- Implement and use Microsoft Fabric audit logs
- Configure and implement OneLake security

Orchestrate processes

- Choose between Dataflow gen 2, a pipeline and a notebook
- Design and implement schedules and event-based triggers
- Implement orchestration patterns with notebooks and pipelines, including parameters and dynamic expressions

Ingest and transform data (30–35%)

Design and implement loading patterns

- Design and implement full and incremental data loads

- Prepare data for loading into a dimensional model
- Design and implement a loading pattern for streaming data

Ingest and transform batch data

- Choose an appropriate data store
- Choose between Dataflows Gen2, notebooks, KQL, and T-SQL for data transformation
- Create and manage OneLake shortcuts
- Implement mirroring
- Ingest data by using pipelines
- Transform data by using PySpark, SQL, and KQL
- Denormalize data
- Group and aggregate data
- Handle duplicate, missing, and late-arriving data

Ingest and transform streaming data

- Choose an appropriate streaming engine
- Choose between native tables and OneLake shortcuts in Real-Time Intelligence
- Choose between Query acceleration for OneLake shortcuts and standard OneLake shortcuts in Real-Time Intelligence
- Process data by using Eventstreams
- Process data by using Spark structured streaming
- Process data by using KQL
- Create windowing functions

Monitor and optimize an analytics solution (30–35%)

Monitor Fabric items

- Monitor data ingestion
- Monitor data transformation
- Monitor semantic model refresh
- Configure alerts

Identify and resolve errors

- Identify and resolve pipeline errors
- Identify and resolve Dataflow Gen2 errors
- Identify and resolve notebook errors
- Identify and resolve Eventhouse errors
- Identify and resolve Eventstream errors
- Identify and resolve T-SQL errors
- Identify and resolve OneLake shortcut errors

Optimize performance

- Optimize a Lakehouse table
- Optimize a pipeline
- Optimize a data warehouse
- Optimize Eventstreams and Eventhouses
- Optimize Spark performance
- Optimize query performance

Study Guide for Exam DP-750: Implementing Data Engineering Solutions Using Azure Databricks

Summarize this article for me

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

About the exam

Languages

Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. If the exam isn't available in your preferred

language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of March 11, 2026

Audience profile

As a candidate for this Microsoft Certification, you should have subject matter expertise in integrating and modeling data, building and deploying optimized pipelines, and troubleshooting and maintaining workloads in Azure Databricks. You should also have experience applying data quality and data governance best practices in Unity Catalog.

You need to know how to ingest and transform data by using Structured Query Language (SQL) and Python. You need experience with software development lifecycle (SDLC) practices, including Git. Additionally, you should be familiar with Microsoft Entra, Azure Data Factory, and Azure Monitor.

Your responsibilities for this role include:

- Setting up and configuring an Azure Databricks environment.
- Securing and governing Unity Catalog objects.
- Preparing and processing data.
- Deploying and maintaining data pipelines and workloads.

You work closely with administrators, platform architects, solution architects, data scientists, and data analysts to design, deploy, and secure data engineering solutions by using Azure Databricks.

Skills at a glance

- Set up and configure an Azure Databricks environment (15–20%)
- Secure and govern Unity Catalog objects (15–20%)
- Prepare and process data (30–35%)
- Deploy and maintain data pipelines and workloads (30–35%)

Set up and configure an Azure Databricks environment (15–20%)

Select and configure compute in a workspace

- Choose an appropriate compute type, including job compute, serverless, warehouse, classic compute, and shared compute
- Configure compute performance settings, including CPU, node count, autoscaling, termination, node type, cluster size, and pooling
- Configure compute feature settings, including Photon acceleration, Azure Databricks runtime/Spark version, and machine learning
- Install libraries for a compute resource
- Configure access permissions to a compute resource

Create and organize objects in Unity Catalog

- Apply naming conventions based on requirements, including isolation, development environment, and external sharing
- Create a catalog based on requirements
- Create a schema based on requirements
- Create volumes based on requirements
- Create tables, views, and materialized views
- Implement a foreign catalog by configuring connections
- Implement data definition language (DDL) operations on managed and external tables
- Configure AI/BI Genie instructions for data discovery

Secure and govern Unity Catalog objects (15–20%)

Secure Unity Catalog objects

- Grant privileges to a principal (user, service principal, or group) for securable objects in Unity Catalog
- Implement table- and column-level access control and row-level security
- Access Azure Key Vault secrets from within Azure Databricks
- Authenticate data access by using service principals
- Authenticate resource access by using managed identities

Govern Unity Catalog objects

- Create, implement, and preserve table and column definitions and descriptions for data discovery
- Configure attribute-based access control (ABAC) by using tags and policies
- Configure row filters and column masks
- Apply data retention policies
- Set up and manage data lineage tracking by using Catalog Explorer, including owner, history, dependencies, and lineage
- Configure audit logging
- Design and implement a secure strategy for Delta Sharing

Prepare and process data (30–35%)

Design and implement data modeling in Unity Catalog

- Design logic for data ingestion and data source configuration, including extraction type and file type
- Choose an appropriate data ingestion tool, including Lakeflow Connect, notebooks, and Azure Data Factory
- Choose a data loading method, including batch and streaming

- Choose a data table format, such as Parquet, Delta, CSV, JSON, or Iceberg
- Design and implement a data partitioning scheme
- Choose a slowly changing dimension (SCD) type
- Choose granularity on a column or table based on requirements
- Design and implement a temporal (history) table to record changes over time
- Design and implement a clustering strategy, including liquid clustering, Z-ordering, and deletion vectors
- Choose between managed and unmanaged tables

Ingest data into Unity Catalog

- Ingest data by using Lakeflow Connect, including batch and streaming
- Ingest data by using notebooks, including batch and streaming
- Ingest data by using SQL methods, including CREATE TABLE … AS (CTAS), CREATE OR REPLACE TABLE, and COPY INTO
- Ingest data by using a change data capture (CDC) feed
- Ingest data by using Spark Structured Streaming
- Ingest streaming data from Azure Event Hubs
- Ingest data by using Lakeflow Spark Declarative Pipelines, including Auto Loader

Cleanse, transform, and load data into Unity Catalog

- Profile data to generate summary statistics and assess data distributions
- Choose appropriate column data types
- Identify and resolve duplicate, missing, and null values
- Transform data, including filtering, grouping, and aggregating data
- Transform data by using join, union, intersect, and except operators
- Transform data by denormalizing, pivoting, and unpivoting data
- Load data by using merge, insert, and append operations

Implement and manage data quality constraints in Unity Catalog

- Implement validation checks, including nullability, data cardinality, and range checking
- Implement data type checks
- Implement schema enforcement and manage schema drift
- Manage data quality with pipeline expectations in Lakeflow Spark Declarative Pipelines

Deploy and maintain data pipelines and workloads (30–35%)

Design and implement data pipelines

- Design order of operations for a data pipeline
- Choose between notebook and Lakeflow Spark Declarative Pipelines
- Design task logic for Lakeflow Jobs
- Design and implement error handling in data pipelines, notebooks, and jobs
- Create a data pipeline by using a notebook, including precedence constraints
- Create a data pipeline by using Lakeflow Spark Declarative Pipelines

Implement Lakeflow Jobs

- Create a job, including setup and configuration
- Configure job triggers
- Schedule a job
- Configure alerts for a job
- Configure automatic restarts for a job or a data pipeline

Implement development lifecycle processes in Azure Databricks

- Apply version control best practices using Git
- Manage branching, pull requests, and conflict resolution
- Implement a testing strategy, including unit tests, integration tests, end-to-end tests, and user acceptance testing (UAT)

- Configure and package Databricks Asset Bundles
- Deploy a bundle by using the Azure Databricks command-line interface (CLI)
- Deploy a bundle by using REST APIs

Monitor, troubleshoot, and optimize workloads in Azure Databricks

- Monitor and manage cluster consumption to optimize performance and cost
- Troubleshoot and repair issues in Lakeflow Jobs, including repair, restart, stop, and run functions
- Troubleshoot and repair issues in Apache Spark jobs and notebooks, including performance tuning, resolving resource bottlenecks, and cluster restart
- Investigate and resolve caching, skewing, spilling, and shuffle issues by using a Directed Acyclic Graph (DAG), the Spark UI, and query profile
- Optimize Delta tables for performance and cost, including OPTIMIZE and VACUUM commands
- Implement log streaming by using Log Analytics in Azure Monitor
- Configure alerts by using Azure Monitor

About the exam

Languages

Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of March 12, 2026

Audience profile

As a candidate for this Microsoft Certification, you should have subject matter expertise in designing and developing AI-enabled database solutions across Microsoft SQL platforms, including Microsoft SQL Server, Azure SQL, and SQL databases in Microsoft Fabric.

You should also have experience writing T-SQL code and developing databases in Microsoft SQL platforms. Plus, you need to be familiar with continuous integration and continuous deployment (CI/CD) practices in GitHub, AI-assisted development tools, and AI concepts, such as embeddings, vectors, and models.

Your responsibilities include:

- Designing and developing database solutions that include both structured and semi-structured data.
- Integrating AI features into modern and highly scalable enterprise applications.
- Securing, optimizing, and deploying database solutions.
- Implementing AI capabilities in database solutions.

You work closely with application developers; database administrators (DBAs); architects; AI engineers; development, security, operations (DevSecOps) engineers; security and compliance administrators; and other stakeholders to deliver robust, high-performance database solutions that power modern applications and AI-driven experiences.

Skills at a glance

- Design and develop database solutions (35–40%)

- Secure, optimize, and deploy database solutions (35–40%)
- Implement AI capabilities in database solutions (25–30%)

Design and develop database solutions (35–40%)

Design and implement database objects

- Design and implement tables, including data types, size, columns, indexes, and column store indexes
- Design and implement specialized tables, including in-memory, temporal, external, ledger, and graph
- Design and implement JSON columns and indexes
- Design and implement database constraints, including PRIMARY KEY, FOREIGN KEY, UNIQUE, CHECK, and DEFAULT
- Design and implement SEQUENCES
- Design and implement partitioning for tables and indexes

Implement programmability objects

- Create views
- Create scalar functions
- Create table-valued functions
- Create stored procedures
- Create triggers

Write advanced T-SQL code

- Write common table expressions (CTEs)
- Write queries that include window functions
- Write queries that include JSON functions, such as JSON_OBJECT, JSON_ARRAY, JSON_ARRAYAGG, JSON_CONTAINS, OPENJSON, and JSON_VALUE

- Write queries that include regular expressions, such as REGEXP_LIKE, REGEXP_REPLACE, REGEXP_SUBSTR, REGEXP_INSTR, REGEXP_COUNT, REGEXP_MATCHES, and REGEXP_SPLIT_TO_TABLE
- Write queries that include fuzzy string matching functions, such as EDIT_DISTANCE, EDIT_DISTANCE_SIMILARITY, and JARO_WINKLER_DISTANCE
- Write graph queries that use the MATCH operator
- Write correlated queries
- Implement error handling

Design and implement SQL solutions by using AI-assisted tools

- Interpret security impact of using AI-assisted tools
- Enable GitHub Copilot and Microsoft Copilot in Fabric
- Configure model and Model Context Protocol (MCP) tool options in a GitHub Copilot or Copilot in Fabric chat session
- Create and configure GitHub Copilot instruction files
- Connect to MCP server endpoints, including Microsoft SQL Server and Fabric lakehouse

Secure, optimize, and deploy database solutions (35–40%)

Implement data security and compliance

- Design and implement data encryption, including Always Encrypted and column-level encryption
- Design and implement Dynamic Data Masking
- Design and implement Row-Level Security (RLS)
- Design and implement object-level permissions
- Implement secure database access, including passwordless
- Implement auditing
- Secure model endpoints, including Managed Identity
- Secure GraphQL, REST, and MCP endpoints

Optimize database performance

- Recommend database configurations
- Preserve data integrity and consistency by using transaction isolation levels and concurrency controls
- Evaluate query performance by using query execution plans, dynamic management views (DMVs), Query Store, and Query Performance Insight
- Identify and resolve query performance issues, including blocking and deadlocks

Implement CI/CD by using SQL Database Projects

- Design and implement a testing strategy, including unit tests and integration tests
- Create and manage reference/static data in source control
- Create, build, and validate database models by using SQL Database Projects, including SDK-style models
- Configure source control for SQL Database Projects
- Manage branching, pull requests, and conflict resolution
- Implement secrets management
- Detect schema drift by using SQL Database Projects
- Update an SQL database project and deploy changes
- Design and implement controls for deployment pipelines, including branching policies, triggers in approvals, authentication tables, and code owners

Integrate SQL solutions with Azure services

- Create configuration files for Data API builder (DAB)
- Configure entities for REST and GraphQL, including data caching, pagination, searching, and filtering
- Configure REST or GraphQL endpoints
- Expose database objects, stored procedures, and views, including GraphQL relationships
- Configure and implement DAB deployment

- Recommend Azure Monitor configurations, including Application Insights and Log Analytics
- Handle changes by using change event streaming (CES), change data capture (CDC), Change Tracking, Azure Functions with SQL trigger binding, or Azure Logic Apps

Implement AI capabilities in database solutions (25–30%)

Design and implement models and embeddings

- Evaluate external models, including multimodal, multilanguage, sizes, and structured output
- Create and manage external models
- Choose an embedding maintenance method, including table triggers, Change Tracking, Azure Functions with SQL trigger binding, Azure Logic Apps, CDC, CES, and Microsoft Foundry
- Identify which columns to include in embeddings
- Design and implement chunks for embeddings
- Generate embeddings

Design and implement intelligent search

- Choose from full-text, semantic vector, and hybrid search
- Implement full-text search
- Design for vector data, including vector data type, vector indexes, and size
- Identify when to use vector-related types and functions for semantic searching, including VECTOR_NORMALIZE, VECTOR_DISTANCE, VECTORPROPERTY, and VECTOR_SEARCH
- Choose between using ANN and ENN for vector search
- Evaluate vector index types and metrics
- Implement vector search
- Implement hybrid search
- Implement reciprocal rank fusion (RRF)

- Evaluate performance of vector and hybrid search

Design and implement retrieval-augmented generation (RAG)

- Identify use cases for RAG
- Create a prompt by using the sp_invoke_external_rest_endpoint stored procedure
- Convert structured data to JSON for language model processing
- Send results to language model
- Extract language model responses

Study guide for Exam DP-900: Microsoft Azure Data Fundamentals

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.

Updates to the exam

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. Although Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 21, 2026

Audience profile

This exam is an opportunity to demonstrate your knowledge of core data concepts and related Microsoft Azure data services. As a candidate for this exam, you should have familiarity with Exam DP-900's self-paced or instructor-led learning material.

This exam is intended for you, if you're a candidate beginning to work with data in the cloud.

You should be familiar with:

- The concepts of relational and non-relational data.
- Different types of data workloads such as transactional or analytical.

You can use Azure Data Fundamentals to prepare for other Azure role-based certifications like Azure Database Administrator Associate or Azure Data Engineer Associate, but it is not a prerequisite for any of them.

Skills at a glance

- Describe core data concepts (25–30%)
- Identify considerations for relational data on Azure (20–25%)
- Describe considerations for working with non-relational data on Azure (15–20%)
- Describe an analytics workload on Azure (25–30%)

Describe core data concepts (25–30%)

Describe ways to represent data

- Describe the features of structured data

- Describe the features of semi-structured data
- Describe the features of unstructured data

Identify options for data storage

- Describe common formats for data files
- Describe features of common data stores including databases
- Identify Azure datastores for common use cases

Describe common data workloads

- Describe features of transactional workloads
- Describe features of analytical workloads

Identify roles and responsibilities for data workloads

- Describe responsibilities for database administrators
- Describe responsibilities for data engineers
- Describe responsibilities for data analysts

Identify considerations for relational data on Azure (20–25%)

Describe relational concepts

- Identify features of relational data
- Describe normalization and why it is used
- Identify common structured query language (SQL) statements
- Identify common database objects

Describe relational Azure data services

- Describe the Azure SQL family of products, including Azure SQL Database, Azure SQL Managed Instance, and SQL Server on Azure Virtual Machines
- Identify Azure database services for open-source database systems

Describe considerations for working with non-relational data on Azure (15–20%)

Describe the capabilities of Azure storage

- Describe features of Azure Blob storage
- Describe features of Azure Files
- Describe features of Azure Table storage

Describe the capabilities and features of Azure Cosmos DB

- Identify use cases for Azure Cosmos DB
- Describe Azure Cosmos DB APIs

Describe an analytics workload (25–30%)

Describe common elements of large-scale analytics

- Describe considerations for data ingestion and processing
- Describe options for analytical data stores
- Describe Microsoft cloud services for large-scale analytics, including Azure Databricks and Microsoft Fabric

Describe considerations for real-time data analytics

- Describe the difference between batch and streaming data
- Identify Microsoft cloud services for real-time analytics

Describe data visualization in Microsoft Power BI

- Identify the capabilities of Power BI
- Describe features of data models in Power BI
- Identify appropriate visualizations for data

About the exam

Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 2026

Audience profile

Candidates for this exam should have experience administering GitHub Enterprise environments, including user identity and access management, GitHub Actions, enterprise-level governance, and the administration of features that support secure software development (such as GitHub Advanced Security). Administrators in this role support both GitHub Enterprise Cloud and Server deployments and collaborate with development, security, and operations teams to ensure effective use of GitHub tools and services.

Skills at a glance

- Manage GitHub identities and access (15–20%)
- Administer GitHub Enterprise environment (10–15%)
- Implement secure software development and compliance (25–30%)
- Manage GitHub Actions (20–25%)
- Monitor and optimize GitHub usage (10–15%)

Manage GitHub identities and access (15–20%)

Manage user identities and authentication

- Describe differences between managed users and personal accounts
- Configure and enforce SAML SSO and 2FA
- Understand SCIM and team synchronization: implementation and key differences
- Choose and configure identity providers
- Explain GitHub’s authentication and authorization model

Manage access and permissions

- Configure organization and repository roles
- Define and manage enterprise teams
- Audit access and permissions
- Manage settings, policies, rulesets, and roles

Administer GitHub Enterprise environment (10–15%)

Support GitHub Enterprise users and stakeholders

- Identify issues resolvable by admins vs GitHub Support
- Generate support bundles and diagnostics
- Recommend standards for developer processes
- Define standards for workflows, branching, reviews, and releases

Manage deployment and licensing

- Describe GitHub Enterprise deployment scenarios (GHEC with EMU, GHEC with Data Residency + EMU, GHEC with personal accounts, GHES)
- Explain licensing and billing models
- Monitor license usage and consumption

Implement secure software development and compliance (25–30%)

Configure security policies and rulesets

- Define organization and enterprise policies
- Strengthen enterprise security posture and data protection
- Implement audit logging and reporting

Enable repository security features

- Configure vulnerability alerts, secret scanning, and CodeQL

- Manage Dependabot and security advisories
- Define and implement a security response plan

Manage API access and integrations

- Configure personal access tokens
- Understand rate limits for PATs and GitHub Apps
- Describe GitHub Apps and OAuth Apps
- Approve or deny app usage based on policy

Manage GitHub Actions (20–25%)

Configure workflows and reusable components

- Configure and manage reuse of actions and workflows to the enterprise repository
- Apply organizational policies for GitHub Actions

Manage runners

- Manage runner groups and administer GitHub-hosted vs. self-hosted runner options
- Apply IP allow lists and configure networking (including Azure private networking)
- Monitor and troubleshoot runner performance

Manage encrypted secrets

- Define scope and access for secrets
- Configure secrets at organization and repository levels
- Integrate third-party vaults

Monitor and optimize GitHub usage (10–15%)

Monitor enterprise usage and activity

- Analyze audit logs and API usage
- Distinguish admin responsibilities vs. GitHub Support and generate diagnostics

- Evaluate enterprise usage patterns to identify adoption, activity, and underutilized features

Optimize cost and performance

- Interpret usage reports for metered products
- Recommend strategies for license and resource optimization

Study resources

Change log

This exam has changed significantly (e.g., new objectives were added, some were removed, existing objectives may have moved to different functional groups, and all were reworded) on July, 2026.

Last updated on 05/05/2026

Study guide for Exam GH-200: GitHub Actions

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a free online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.

About the exam

Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of January 2026

Audience profile

Candidates for this exam should have expertise in automating software development workflows with GitHub Actions. This includes creating and maintaining workflows and actions, managing GitHub Actions at scale, and ensuring secure and efficient automation for organizations and enterprises. Candidates should also be familiar with CI/CD, GitHub repositories, GitHub Packages, and integrating third-party services.

Skills at a glance

- Author and manage workflows (20–25%)
- Consume and troubleshoot workflows (15–20%)
- Author and maintain actions (15–20%)
- Manage GitHub Actions for the enterprise (20–25%)
- Secure and optimize automation (10–15%)

Author and manage workflows (20–25%)

Configure workflow triggers and events

- Configure workflows to run for scheduled, manual, webhook, and repository events
- Choose appropriate scope, permissions, and events for workflow automation
- Define and validate workflow_dispatch inputs (types, required, defaults) and pass inputs to reusable workflows via workflow_call with inputs and secrets mapping

Design and implement workflow structure

- Use jobs, steps, and conditional logic
- Implement dependencies between jobs
- Use workflow commands and environment variables
- Use service containers (services:) for dependent services (databases, queues); configure ports, health checks, and container options
- Use strategy and matrix to generate job variations (OS, language/runtime versions); apply include/exclude; control fail-fast and max-parallel; optimize matrix size for cost and performance; account for runner image changes (Ubuntu 20.04 deprecation, Windows Server 2025 migration for windows-latest)
- Implement YAML anchors and aliases (&, * and merge <<) to reuse repeated mappings/steps within a single workflow file
- Use predefined contexts (github, runner, env, vars, secrets, inputs, matrix, needs, strategy, job, steps, github.event, github.ref) to access workflow, repository, and runtime metadata; understand immutable actions behavior and version pinning requirements
- Evaluate expressions with ${{ }} referencing contexts; distinguish static (workflow parse) vs runtime evaluation; prevent secret leakage in logs and expressions
- Leverage editor tooling (GitHub Actions VS Code extension / YAML schema completion, metadata IntelliSense, validation) to author and maintain workflows efficiently

Manage workflow execution and outputs

- Configure caching and artifact management; apply retention policies via REST APIs (logs, artifacts, workflow runs) at org/repo level
- Pass data between jobs and steps (artifacts, outputs, environment files via GITHUB_ENV and GITHUB_OUTPUT, reusable workflow outputs)
- Generate job summaries using GITHUB_STEP_SUMMARY for rich Markdown reports (test results, coverage, links)
- Add workflow status badges and environment protections

Consume and troubleshoot workflows (15–20%)

Interpret workflow behavior and results

- Identify workflow triggers and effects from configuration and logs
- Diagnose failed workflow runs using logs and run history
- Expand and interpret YAML anchors, aliases, and merged mappings when analyzing workflow configuration
- Interpret matrix expansions, correlate job names to matrix axes, analyze failures across variants, and selectively rerun individual matrix jobs

Access workflow artifacts and logs

- Locate workflows, logs, and artifacts in the UI and via API
- Download and manage workflow artifacts

Use and manage workflow templates

- Consume organization-level and reusable workflows
- Consume non-public organization workflow templates
- Use starter workflows (public and private/non-public templates); customize and adapt; distinguish from reusable workflows and composite actions
- Differentiate starter workflows (copy scaffold, independent after creation) vs reusable workflows (central versioned definition invoked via workflow_call) vs composite actions (encapsulated step logic)
- Contrast disabling and deleting workflows

Author and maintain actions (15–20%)

Create and troubleshoot custom actions

- Identify and implement action types (JavaScript, Docker, composite); understand immutable actions rollout on hosted runners and implications for version pinning and registry sources
- Troubleshoot action execution and errors

Define action structure and metadata

- Specify required files, directory structure, and metadata
- Implement workflow commands within actions

Distribute and maintain actions

- Select distribution models (public, private, marketplace)
- Publish actions to the GitHub Marketplace
- Apply versioning and release strategies

Manage GitHub Actions for the enterprise (20–25%)

Distribute and govern actions and workflows

- Define and manage reusable components and templates
- Control access to actions and workflows within the enterprise
- Configure organizational use policies

Manage runners at scale

- Configure and monitor GitHub-hosted and self-hosted runners
- Apply IP allow lists and networking settings
- Manage runner groups and troubleshoot runner issues
- Identify preinstalled software/tool versions on GitHub-hosted runners (image release notes, toolcache) and install additional software at runtime (setup-* actions, package managers, caching, container images, custom self-hosted images)

Manage encrypted secrets and variables

- Define and scope encrypted secrets and variables at the organization, repository, and environment levels
- Access and use secrets and variables in workflows and actions; manage secrets and variables programmatically via REST APIs

Secure and optimize automation (10–15%)

Implement security best practices

- Use environment protections and approval gates
- Identify and use trustworthy actions from the Marketplace
- Mitigate script injection (sanitize/validate inputs, least-privilege permissions, avoid untrusted data in run:, proper shell quoting, prefer vetted actions over inline scripts)
- Understand GITHUB_TOKEN lifecycle (ephemeral, scoped), configure granular permissions, contrast with PAT; restrict write scopes
- Use OIDC token (id-token permission) for cloud provider federation to eliminate long-lived cloud secrets
- Pin third-party actions to full commit SHAs; align with immutable actions enforcement on hosted runners; avoid floating @main/@v* without justification
- Enforce action usage policies (organization/repository allow/deny lists, required reviewers for unverified actions)
- Generate and verify artifact attestations / provenance (e.g., SLSA, build metadata) and integrate into deployment verification

Optimize workflow performance and cost

- Configure caching and artifact retention for efficiency; apply retention policies programmatically via REST APIs
- Recommend strategies for scaling and optimizing workflows

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Skills measured as of January 2026

Audience profile

Candidates for this exam should possess expertise in using GitHub Copilot to improve software development productivity, quality, and security. This includes responsible AI use, prompt engineering, Copilot features across various plans, and privacy safeguards. Candidates should also be familiar with GitHub fundamentals and have experience with one or more programming languages.

Skills at a glance

- Use GitHub Copilot responsibly (15–20%)
- Use GitHub Copilot features (25–30%)
- GitHub Copilot features (25–30%)
- Understand GitHub Copilot data and architecture (10–15%)
- Apply prompt engineering and context crafting (10–15%)
- Improve developer productivity with GitHub Copilot (10–15%)
- Configure privacy, content exclusions, and safeguards (10–15%)

Use GitHub Copilot responsibly (15–20%)

Understand responsible AI principles

- Describe risks and limitations of Generative AI tools
- Describe ethical and responsible AI usage

- Identify potential harms and mitigation strategies of AI usage

Validate and operate AI tools

- Explain the need to validate AI output
- Identify how to operate GitHub Copilot responsibly

Use GitHub Copilot features (25–30%)

Use GitHub Copilot in the IDE

- Enable Copilot in the IDE
- Trigger Copilot through inline suggestions, chat, CLI, and Plan Mode
- Exclude specific files or repositories (app knowledge)

Use GitHub Copilot CLI

- Define GitHub Copilot CLI and how it benefits developers
- Identify the steps for installing GitHub Copilot CLI
- Describe key GitHub Copilot CLI features and commands
- Use GitHub Copilot CLI interactively and in sessions
- Generate scripts and manage files with GitHub Copilot CLI

Use GitHub Copilot features and capabilities

- Use Agent Mode, Edit Mode, and MCP for enhanced development and workflows; manage Agent Sessions and delegate tasks to Sub-Agents for optimized context usage
- Use Copilot for code review and coding assistance
- Utilize Spaces, Spark, Pull Request summaries, and customizable review standards via instructions files
- Understand the limits, options, feedback, and commands of GitHub Copilot Chat; include prompt file reuse for consistent responses

Manage organization-wide settings and policies

- Configure organization-wide policy management; enable Copilot Code Review policies and manage feature availability across IDEs and github.com
- Utilize audit log events
- Manage subscriptions using the REST API

Understand GitHub Copilot data and architecture (10–15%)

Describe data handling and flow

- Explain data usage, flow, and sharing
- Describe input processing and prompt building
- Explain proxy filtering and post-processing

Understand lifecycle and limitations

- Visualize code suggestion lifecycle
- Describe limitations of LLMs and Copilot

Apply prompt engineering and context crafting (10–15%)

Craft effective prompts

- Describe prompt structure and context
- Understand how context is determined
- Use zero-shot and few-shot prompting
- Apply best practices for prompt crafting

Engineer prompts for performance

- Explain prompt engineering principles
- Describe prompt process flow and chat history usage

Improve developer productivity with GitHub Copilot (10–15%)

Enhance productivity and code quality

- Use Copilot for code generation, refactoring, and documentation
- Accelerate learning and reduce context switching
- Generate sample data and modernize legacy code

Support testing and security

- Generate unit and integration tests
- Identify edge cases and write assertions
- Suggest security improvements and performance optimizations

Configure privacy, content exclusions, and safeguards (10–15%)

Manage privacy settings and exclusions

- Configure content exclusions and editor settings
- Describe ownership and limitations of outputs

Apply safeguards and troubleshoot

- Enable duplication detection and security warnings
- Resolve issues with suggestions and exclusions

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 2026

Audience profile

Candidates for this exam have experience using GitHub Advanced Security (GHAS) to secure code, secrets, and dependencies across the software development lifecycle. They can configure security features, triage and remediate alerts, and apply prevention-first practices using policies, workflows, and automation. Candidates are familiar with GitHub fundamentals, CI/CD, and secure development concepts.

Skills at a glance

- Describe GitHub Security suites, features, and ecosystem (15–20%)
- Configure and use Secret Protection (formerly secret scanning) (15–20%)
- Configure and use supply chain security (formerly Dependabot/Dependency Review) (15–20%)
- Configure and use Code Security (formerly Code Scanning with CodeQL) (10–15%)
- Security operations: best practices, prioritization, and remediation (15–20%)
- GitHub Security suites administration (10–15%)

Describe GitHub Security suites, features, and ecosystem (15–20%)

Understand GitHub Security suites and architecture

- Describe GitHub Security suite structure and navigation
- Contrast Code Security, Secret Protection, and Supply Chain Security
- Differentiate security feature availability for public repositories vs. enterprise environments
- Explain features and benefits of the Security Overview

Apply secure SDLC and security strategies

- Explain differences and interplay between Secret Protection and Code Security
- Describe end-to-end secure SDLC using GitHub Security suites
- Compare prevention-first approaches vs. gate-based security strategies
- Explain security campaigns and their role in reducing risk

Detect, manage, and respond to security alerts

- Identify vulnerability and secret detection mechanisms
- Choose and act on security alerts (alert management, policies, workflows)
- Explain implications and best practices for ignoring or dismissing alerts
- Describe developer, security, and admin responsibilities for alerts and remediation

Manage access, governance, and supply chain security

- Explain alert access management, roles, delegated bypass, and enforcement
- Describe supply chain security concepts and alert information across the SDLC

Configure and use Secret Protection (formerly secret scanning) (15–20%)

Enable and configure Secret Protection

- Enable GitHub Secret Protection at the repository and organization levels
- Configure Secret Protection settings and feature availability
- Contrast Secret Protection behavior for public vs. private/enterprise repositories

Prevent secret exposure

- Explain Push Protection and how it prevents secrets at the source
- Describe validity checks and prioritized alerting for high-confidence secrets

Manage and respond to Secret Protection alerts

- Describe the Secret Protection alert lifecycle (creation, status, dismissal)
- Respond to secret alerts and apply appropriate remediation actions
- Explain implications and best practices for dismissing or ignoring alerts

Control access, policies, and customization

- Explain role-based and delegated bypass policies in Secret Protection
- Configure alert recipients and exclusions
- Create and manage custom secret patterns

Configure and use supply chain security (formerly Dependabot/Dependency Review) (15–20%)

Understand and manage dependency and supply chain risks

- Comprehensive dependency security (tools, vulnerability databases, SBOMs)
- Generate and interpret the dependency graph
- SBOM usage: export options, formats, and supply chain context

Detect, prioritize, and respond to supply chain alerts

- Supply chain alerts and security updates (prioritization, EPSS scoring)
- Remediating supply chain alerts through campaigns and pull requests
- Auto-dismiss behavior and security campaign configuration

Secure dependencies during development

- Dependency Review (pre-merge checks, license and compliance validation, configuration)
- Advanced dependency update rules (grouping, auto-dismiss, update strategies)

Configure policies, permissions, and integrations

- Permissions and role-based alert assignment
- Workflow management for dependency and supply chain security

- External notifications, webhooks, and security integrations

Configure and use Code Security (formerly Code Scanning with CodeQL) (10–15%)

Understand code scanning approaches and tooling

- Native and third-party code scanning options
- Choosing between CodeQL and third-party analysis tools
- SARIF file ingestion, management, and interoperability

Set up and configure Code Security

- Enable code security using GitHub Actions or external CI systems
- Configure code scanning workflows and workflow templates
- Use matrix builds and define appropriate scan frequency

Analyze, triage, and remediate code scanning results

- Review scan results, including dataflow analysis insights
- Alert lifecycles, autofix capabilities, and remediation workflows
- Dismissing alerts and managing severity and category classifications

Optimize and automate Code Security operations

- Advanced configuration and customization
- Troubleshooting scan failures and performance issues

Security operations: best practices, prioritization, and remediation (15–20%)

Understand vulnerability context and remediation frameworks

- CVE, CWE, and GitHub Security Advisory concepts
- End-to-end remediation workflows across security alerts and advisories

Prioritize and manage security work at scale

- Defining, prioritizing, and enforcing severity and remediation rulesets
- Campaign-based remediation strategies and bulk alert management
- Automated alert dismissal and documentation practices

Customize and optimize security detection

- Customizing CodeQL query suites and language-specific analysis
- Tailoring security detection to organizational risk profiles

Collaborate across roles and enforce governance

- Security roles, delegated exceptions, and alert ownership
- Collaboration on alerts and security campaigns across teams
- Cross-suite rulesets, policies, and enforcement mechanisms

Shift left and strengthen preventive security

- Early vulnerability prevention through push protection, dependency scanning, and pre-merge analysis

GitHub Security suites administration (10–15%)

Roll out and manage security features at scale

- Enable GitHub Security Suites at enterprise, organization, and repository levels
- Understand feature availability and differences across GitHub Enterprise Cloud and GitHub Enterprise Server

Configure security features and defaults

- Enable Code Security (CodeQL), Secret Protection, and Supply Chain Security
- Define default configurations and inheritance behavior

Define governance, access, and Code Security workflows

- Define enterprise and organization security policies and rulesets
- Configure enforcement boundaries, bypass permissions, and exceptions
- Define administrator, security manager, and developer roles
- Configure permissions for managing and dismissing security alerts
- Enable and configure default or approved custom CodeQL workflows
- Understand APIs and automation methods for large-scale security configuration and governance

Manage CodeQL and security automation

- Enable and configure default or approved custom CodeQL workflows
- Understand available APIs and automation methods for large-scale security configuration and governance

Domains

Audience profile

Candidates for this exam should have foundational knowledge of GitHub and its core features. This includes understanding Git, repositories, collaboration tools, project management, and modern development practices. The exam is designed for non-developers, developers, and all GitHub users seeking to improve their proficiency with GitHub fundamentals.

Skills at a glance as of January 2026

- Understand Git and GitHub basics (25–30%)
- Work with GitHub repositories (10–15%)
- Collaborate using GitHub (10–15%)
- Apply modern development practices (10–15%)
- Manage projects with GitHub (5–10%)
- Understand privacy, security, and administration (10–15%)
- Explore the GitHub community (5–10%)

Understand Git and GitHub basics (25–30%)

Version control fundamentals

- Describe the purpose and benefits of version control
- Explain the difference between Git and GitHub
- Identify key Git concepts such as repositories, commits, and branches

Working with GitHub

- Describe GitHub accounts, organizations, and enterprise options
- Explain the GitHub Flow for collaboration
- Identify uses of Markdown for clear communication in issues and pull requests
- Recognize when to use GitHub Desktop and GitHub Mobile

Work with GitHub repositories (10–15%)

Repository management

- Describe the structure and key files of a GitHub repository (README, LICENSE, CONTRIBUTING, CODEOWNERS, SECURITY)
- Identify how to create, organize, and maintain repositories using templates and branches.
- Explain how to add and manage files within a repository
- Describe repository insights, stars, feature previews, repository metrics dashboards, and dependency insights for improved visibility
- Recognize best practices for repository maintenance and collaboration

Collaborate using GitHub (10–15%)

Collaboration tools

- Describe how to use issues, pull requests, and discussions for collaboration
- Explain how to link pull requests to issues and manage templates, filters, and assignments
- Identify the purpose of notifications and how to configure them for workflow management
- Describe how to use Gists, Wikis, and GitHub Pages to document and share information

Apply modern development practices (10–15%)

Automation and AI tools

- Describe the purpose and capabilities of GitHub Actions
- Identify how GitHub Copilot assists with AI-powered code suggestions, including Copilot agents, Agent Mode, and multi-model support
- Explain the differences between GitHub Copilot for Individuals, Business, and Enterprise
- Describe GitHub Codespaces and how to set up, customize, and use dev containers
- Explain when to use the github.dev editor and how it differs from Codespaces

Manage projects with GitHub (5–10%)

Project Tracking and organization

- Describe GitHub Projects and layout options
- Explain how to configure projects, labels, milestones, and workflows
- Identify how to use saved replies and assignees to streamline communication
- Describe how project insights can be used to track progress and productivity

Understand Privacy, security, and administration (10–15%)

Security and access management

- Describe how to secure accounts with two-factor authentication (2FA) and passkeys
- Identify access permissions and roles for repositories and organizations
- Explain the purpose of Enterprise Managed Users (EMUs) and organization-wide Copilot policy management
- Describe repository privacy options, visibility settings, and branch protection rules
- Recognize how to manage organization settings, teams, and roles

Explore the GitHub community (5–10%)

Open-source engagement

- Describe the benefits of open source and GitHub Sponsors
- Explain how GitHub supports and advances open-source projects.
- Identify how to follow users and organizations to stay informed about activity.
- Describe the GitHub Marketplace and its purpose.
- Explain how InnerSource applies open-source principles within organizations.
- Recognize when to use forks, templates, and discoverable repositories to promote collaboration.

Study resources

Recommendations

To increase your chances of success in passing the GitHub Foundations exam, it's essential to start with a solid foundation of basic experience, exposure, and proficiency on GitHub. The recommended learning paths for this exam provide you with an in-depth study of the learning content, followed by hands-on exercises and preparation assessment questions that were created to enable you to fine-tune your knowledge and readiness for the certification exam.

The following resources have been created in collaboration with GitHub as recommended content that covers the learning objectives in each domain for the GitHub Foundations exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of April 19, 2024

Audience profile

As a candidate for this exam, you're a Microsoft Dynamics 365 functional consultant with sales expertise. You're responsible for implementing solutions that meet the business requirements of an organization, large or small. You're also responsible for identifying potential process efficiencies and improvements that could be achieved by using Dynamics 365 Sales and wider Microsoft Power Platform features. This may include supporting a sales lifecycle to run effectively and assisting the sales team to:

- Achieve revenue targets.
- Execute business strategies.
- Meet an organization's objectives.

You're responsible for configuring and expanding the core sales application functionality to create scalable customer solutions which support, automate, and accelerate the company's sales process. You'll use your knowledge of Microsoft Power Platform and the common customer engagement capabilities in Dynamics 365 to inform the solution design where the following are required:

- Integrations
- Business process flows
- Visualizations
- Custom applications

As a candidate, you should:

- Have strong business knowledge of sales processes for business-to-customer and business-to-business scenarios.
- Understand the sales process of the customer as well as the core functionality of Dynamics 365 Sales to identify where the two align and differ.
- Be proficient in configuring Microsoft Power Platform, primarily model-driven apps.
- Have knowledge of Microsoft 365 services and their interactions with Microsoft Dataverse.

Skills at a glance

- Configure Dynamics 365 Sales (35–40%)
- Manage core sales features (30–35%)

- Configure additional tools and services (25–30%)

Configure Dynamics 365 Sales (35–40%)

Configure user interfaces

- Configure model-driven apps
- Create and configure forms
- Create and configure views
- Create email, Excel, and Word templates
- Configure the timeline control
- Describe Microsoft Dataverse security concepts
- Configure column mappings on table relationships

Configure sales settings

- Configure sales territories and hierarchical sales territories
- Configure auto number settings for quotes, orders, and invoices
- Configure currencies and fiscal years
- Describe sales security roles
- Manage sales literature
- Configure hierarchy security
- Configure and utilize the assistant
- Configure the business card scanner control
- Enable the Kanban control
- Describe goal management

Configure processes

- Configure duplicate detection rules

- Configure sales business process flows
- Import data by using the Data Import wizard and export data to Excel

Configure sales visualizations

- Implement Power BI apps for Sales
- Configure sales dashboards
- Describe options for sales reports
- Configure the opportunity pipeline view

Configure sales engagement

- Configure and utilize the Sales accelerator
- Configure the workspace
- Create and manage sequences
- Create and manage segments
- Configure lead and opportunity assignment rules for routing
- Configure the Up Next widget

Evaluate Sales licensing

- Compare and contrast Sales Professional and Enterprise configuration
- Describe use cases for Team member licensing
- Describe the upgrade pathway from Sales Professional to Enterprise

Manage core sales features (30–35%)

Create and manage accounts and contacts

- Create and manage accounts
- Create and manage contacts
- Describe use cases for auto capture

- Describe use cases for email engagement
- Describe relationship intelligence
- Describe use cases for notes analysis
- Describe SMS message engagement with customers

Create and manage leads and opportunities

- Create and manage leads
- Perform lead qualification and disqualification
- Configure lead qualification
- Manage opportunities
- Track stakeholders, sales team members, and competitors
- Manage product line items on opportunities
- Customize the Opportunity Close form
- Configure and utilize predictive lead and opportunity scoring
- Manage the sales pipeline by using the work list
- Configure duplicate lead detection

Create and manage quotes, orders, and invoices

- Add quotes to opportunities
- Edit quotes in various stages
- Send quotes and invoices to customers
- Convert quotes to orders
- Manage orders and invoices

Create and manage the product catalog

- Create and manage products, product bundles, and product families
- Describe the product lifecycle

- Create and manage price lists
- Create and manage unit groups

Create and manage forecasts

- Configure and utilize forecasts
- Describe the forecast templates
- Configure and utilize premium forecasting

Manage in-app campaigns

- Create and manage marketing lists
- Create quick campaigns

Configure additional tools and services (25–30%)

Integrate sales applications

- Integrate with LinkedIn Sales Navigator and Insights
- Describe Dynamics 365 Sales mobile app capabilities
- Create push notifications for the Dynamics 365 Sales mobile app

Integrate with Microsoft 365 services

- Configure mailboxes
- Describe Server-Side Synchronization
- Configure document management
- Deploy the Dynamics 365 App for Outlook
- Configure the Dynamics 365 App for Outlook
- Configure auto capture and email engagement
- Configure SharePoint integration
- Describe Microsoft Teams calling and conversation intelligence

- Describe Microsoft Teams collaboration

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of March 20, 2024

Audience profile

As a candidate for this exam, you're a Microsoft Dynamics 365 Customer Insights - Journeys functional consultant.

You're responsible for implementing solutions that:

- Engage with and convert leads.
- Orchestrate marketing experiences.
- Personalize marketing messaging.
- Deliver marketing insights.

You're responsible for:

- Configuring the core marketing application to include segmentation, email and text message marketing, and interactive journeys.
- Lead nurturing with personalized experiences, events, surveys, lead scoring, and analytics.
- Maintaining compliance and consent policies.

As a candidate, you should have some knowledge of marketing principles and the Dynamics 365 Customer Insights - Journeys application's role in relationship to the Dynamics 365 suite of applications, including interoperability with:

- Dynamics 365 Customer Insights - Data
- Microsoft Power Platform
- Dynamics 365 Customer Voice
- Dynamics 365 Sales
- Microsoft Teams

You should understand:

- Industry terminology
- Industry processes
- Best practices

Skills at a glance

- Configure Dynamics 365 Customer Insights – Journeys (10–15%)
- Manage segments and preferences (15–20%)
- Manage leads, contacts, and accounts (1–5%)
- Manage marketing channels (25–30%)
- Manage journeys (20–25%)
- Manage events and webinars (10–15%)

Configure Dynamics 365 Customer Insights - Journeys (10–15%)

Configure the Customer Insights - Journeys app

- Configure forms, including adding columns to forms and changing form layouts
- Configure views, including adding columns to views
- Configure the model-driven app
- Create and configure columns in tables

Configure organization settings

- Configure domain authentication
- Configure SMS providers, including Microsoft Azure Communication Services

Configure and manage marketing settings

- Configure form matching strategies
- Configure compliance profiles
- Configure brand profiles
- Configure UTM tracking
- Configure audiences

- Configure frequency capping

Manage segments and preferences (15–20%)

Create and manage segments

- Create and manage segments
- Create segments by using Copilot Query Assist
- Combine segments by using union, exclude, or intersect logic
- Create a segment within a customer journey
- Describe table relationships
- Describe Customer Insights - Data tables

Manage preference centers

- Create and manage preference centers
- Describe how consent is managed and enforced for email and text messages
- Configure opt-in and double opt-in
- Describe consent purposes and topics
- Import consent records
- Describe multi-brand preference centers

Manage leads, contacts, and accounts (1–5%)

Manage leads

- Create leads
- Manage the leads lifecycle
- Create and manage lead scoring models

Create and manage accounts and contacts

- Create and manage accounts
- Create and manage contacts
- Create and manage activities and activity templates

Manage marketing channels (25–30%)

Create marketing emails

- Create a marketing email
- Describe the HTML editor feature in a marketing email
- Create and use reusable content blocks
- Define mandatory fields for email
- Add dynamic content to email
- Add conditional content to email
- Validate email content for compliance by using the Accessibility Checker
- Check spam scores for email content by using Spam checker
- Personalize email content
- Describe the content ideas copilot
- Use specialized links
- Include iCalendar files and documents from the asset library

Distribute marketing emails

- Define message requirements
- Validate and publish email messages
- Send emails without building a journey
- Prevent duplicate sends

Create and manage other channels

- Create outbound text messages
- Add SMS keywords to a text message
- Personalize text messages
- Manage SMS keywords
- Configure push notifications
- Include Customer Voice surveys in messages

Create and manage forms

- Manage form templates
- Create and manage forms
- Embed forms in external websites
- Implement form capture for externally managed forms
- Review form submissions
- Describe form hosting options
- Describe use cases for extending forms by using JavaScript
- Configure form validation rules

Manage journeys (20–25%)

Configure journey orchestration

- Create a journey by using a segment
- Configure a journey by using a trigger
- Configure A/B testing and review test results
- Configure a business goal and measure progress
- Add journey reminders
- Define journey exit conditions
- Add channel optimization to a journey

Manage journey triggers

- Describe trigger types
- Describe custom triggers
- Create a trigger for a Dataverse record change
- Use a custom trigger to run a Power Automate flow
- Use conditions in triggers
- Move custom triggers between environments

Explore insights and analytics

- Analyze marketing outcomes
- Track campaigns by using UTM codes

Manage events and webinars (10–15%)

Create and configure events and webinars

- Create an event
- Configure an event as a Microsoft Teams webinar
- Configure an event as a Microsoft Teams Live event
- Configure event agenda, including sessions and tracks
- Manage speakers and event team members
- Create and manage event forms

Manage events

- Manage event registrations, including attendee check-in and cancellations
- Manage registration, waitlists, and attendees
- Configure event capacity and passes
- Describe the event management dashboard and event analytics

Audience profile

As a candidate for this exam you're a Microsoft Dynamics 365 Customer Insights - Journeys functional consultant. You're responsible for implementing solutions that:

- Attract and convert leads.
- Build brand awareness.
- Standardize omnichannel messaging.
- Deliver marketing insights.

You're responsible for:

- Configuring the core marketing application to include segmentation, email marketing, interactive customer journeys, and real-time journeys.
- Lead nurturing with personalized experiences, events, surveys, lead scoring, and analytics.
- Maintaining compliance with data privacy and security regulations.

As a candidate, you should have some knowledge of marketing principles and the Dynamics 365 Customer Insights - Journeys application's role in relationship to the Dynamics 365 suite of applications, including integration of:

- The Microsoft Power Platform
- Other Dynamics 365 customer engagement apps

- Dynamics 365 Customer Insights - Data
- Dynamics 365 Customer Voice
- Microsoft Teams
- Other Microsoft 365 applications

You should understand:

- Industry terminology
- Priorities
- Common initiatives
- Standards
- Methodologies
- Best practices

Skills at a glance

- Configure marketing applications (15–20%)
- Manage segments and lists (10–15%)
- Create and manage marketing forms and pages (5–10%)
- Manage leads, contacts, and accounts (5–10%)
- Create and manage marketing email messages (10–15%)
- Manage customer journeys (20–25%)
- Manage events and webinars (10–15%)
- Configure Dynamics 365 Customer Voice (5–10%)

Configure marketing applications (15–20%)

Configure the Dynamics 365 Customer Insights - Journeys app

- Create and configure forms
- Create and configure views

- Create and configure charts
- Create and configure dashboards
- Configure site maps

Configure organization settings

- Configure data sources for synchronization
- Create and manage templates
- Configure integration with the marketing portal
- Configure landing page settings
- Configure domain authentication
- Configure social media accounts
- Configure webinar providers
- Configure LinkedIn Lead Gen
- Configure the Customer Insights connector
- Configure SMS providers
- Configure push notifications
- Describe Teams integration

Configure and manage marketing settings

- Configure matching strategies
- Configure marketing email settings
- Configure customer journey settings
- Configure opt-in settings
- Configure lead scoring settings
- Configure required options for publishing journeys
- Create and configure marketing calendars

- Configure content settings
- Configure compliance settings
- Manage marketing content libraries

Manage insights

- Analyze contact insights
- Analyze lead insights
- Analyze segment insights
- Analyze customer journey insights
- Analyze email insights
- Analyze lead scoring model insights
- Analyze marketing page insights
- Analyze marketing form insights
- Analyze website insights
- Analyze redirect URL insights
- Analyze event insights

Manage segments and lists (10–15%)

Create and manage segments

- Determine segment type
- Create and manage marketing segments
- Create and manage templates
- Create segments using Natural Language Query
- Configure dynamic segments using the Designer
- Combine segments using union, exclude, or intersect logic

- Create segments from external sources by using Dynamics 365 Customer Insights - Data
- Describe use cases for blocks including behavioral blocks and query blocks

Create and manage subscription centers and lists

- Create a subscription list
- Add a subscription list or lists to a form
- Create a segment based on a subscription list
- Describe use cases for subscription centers
- Create and manage a subscription center
- Describe when to use marketing lists and subscription lists
- Describe use cases for suppression lists

Create and manage marketing forms and pages (5–10%)

Create and manage marketing forms

- Determine which marketing form type to use
- Identify form requirements and limitations
- Create a marketing form by using a template
- Manage form templates
- Create and manage marketing forms
- Configure marketing form fields
- Embed forms in external websites
- Implement form capture for externally managed forms

Create and manage marketing pages

- Create and configure marketing pages and templates
- Create and configure real-time marketing forms

- Add outbound content blocks to marketing pages
- Add marketing forms to marketing pages
- Apply a style to marketing pages
- Integrate marketing pages with marketing emails
- Preview and validate marketing pages
- Publish marketing pages
- Monitor visitors to marketing pages
- Describe personalized marketing pages

Manage leads, contacts, and accounts (5–10%)

Manage leads

- Create leads
- Manage the leads lifecycle
- Synchronize leads from LinkedIn Campaign Manager by using LinkedIn Lead Gen
- Create and manage lead scoring models

Create and manage accounts and contacts

- Create and manage accounts
- Create and manage contacts
- Manage marketing consent settings
- Create and manage activities and activity templates

Create and manage marketing email messages (10–15%)

Create email messages

- Create and manage marketing email and templates
- Describe the HTML editor feature in a marketing email

- Create and use reusable outbound content blocks
- Define mandatory fields for email messages
- Add dynamic content to email messages
- Add conditional content to email messages
- Validate email content for compliance by using the Accessibility Checker
- Check spam scores for messages by using Spam checker
- Personalize using predefined tokens

Manage email messages

- Define message requirements
- Preview messages by using basic, inbox, Litmus features
- Configure A/B testing and review test results
- Validate and publish email messages
- Send emails without building a journey

Manage customer journeys (20–25%)

Create automated campaigns by using outbound customer journeys

- Create and manage customer journey templates
- Determine when to use an inbound or outbound customer journey
- Determine content types required for a customer journey
- Create a customer journey by using a template
- Set the target audiences
- Configure Smart Scheduler
- Describe business unit scoping for segments and customer journeys
- Add segments and suppression lists to a customer journey

- Configure recurring journeys

Publish and manage customer journeys

- Configure required options for publishing journeys
- Check customer journeys for errors
- Publish a customer journey

Configure and manage real-time journey orchestration

- Determine whether to use real-time or outbound journey orchestration
- Describe the real-time marketing asset library
- Enable real-time customer journey orchestration
- Create a real-time journey
- Configure real-time journey triggers
- Configure real-time email templates
- Configure automated SMS keyword flows
- Configure push notifications
- Measure campaign effectiveness with built-in analytics
- Create content blocks in real-time marketing
- Move custom triggers between environments

Manage events and webinars (10–15%)

Create and configure events and webinars

- Create an event
- Configure an event as a Microsoft Teams webinar
- Configure an event as a Microsoft Teams Live event
- Configure buildings, rooms, and layouts for events

- Set up sessions including internal and external tracks
- Set up speakers
- Configure event websites
- Create and manage event forms
- Configure event agenda
- Describe the event business process flow

Manage events

- Create event invitations, banners, and social media posts
- Manage event registrations (including attendee check-in) and cancellations
- Manage speakers, registration, waitlists, and attendees
- Manage sponsors, vendors, logistics, and accommodations
- Record and view financial information for events
- Configure event capacity and passes

Configure Dynamics 365 Customer Voice (5–10%)

Create surveys

- Create and manage Customer Voice surveys
- Apply design elements to a survey
- Define satisfaction metrics

Manage surveys

- Embed surveys in marketing email messages
- Add surveys to a webpage
- Add surveys to customer journeys
- View survey responses in Customer Voice

- Create a segment from survey responses

Skills measured as of March 11, 2026

Audience profile

As a candidate for this exam, you're a functional consultant with customer service expertise. You're responsible for implementing solutions that focus upon:

- Customer service
- Quality
- Reliability
- Efficiency
- Customer satisfaction

You design and implement service management processes and automation in collaboration with solution architects and developers. You coordinate with customer engagement administrators to implement and upgrade customer service components including:

- Case management
- Dynamics 365 Copilot in Service
- Collaboration

- Knowledge management
- Customer feedback

You must have strong applied knowledge of customer service, including in-depth understanding of cases, knowledge management, queues, service-level agreements (SLAs), Customer Service applications, Customer Voice, and routing.

As a functional consultant, your knowledge should include:

- Comprehensive understanding of the customer service application's role in relation to the Dynamics 365 suite of apps.
- Basic understanding of the solution architecture.

Skills at a glance

- Manage cases in Customer Service (51–55%)
- Configure representative experience and routing (25–30%)
- Extend Customer Service (15–20%)

Manage cases in Customer Service (51–55%)

Define and configure foundational Customer Service components

- Implement and monitor record creation and update rules
- Configure and modify the case resolution experience
- Configure and manage security roles
- Configure the timeline control, including records, card forms, and highlights

Create and administer knowledge management

- Configure internal knowledge search capabilities
- Configure tables for knowledge management
- Manage translated knowledge articles
- Integrate and search external knowledge sources

- Configure AI suggestions and Copilot-led knowledge article creation

Manage collaboration

- Configure Microsoft Teams chat
- Configure Join a Teams call for specific users
- Configure suggested contacts in Microsoft Teams, including by using AI and rules-based suggestions
- Configure Teams collaboration experience

Manage agents and Copilot in Service features

- Configure Ask a Question, including filtering content
- Configure case, timeline, and conversation summaries
- Configure Draft a Response
- Configure the Case Management Agent
- Integrate agents with Customer Service, including plug-ins and knowledge sources

Create and manage SLAs for cases

- Configure SLA settings
- Implement actions by using Power Automate
- Apply SLAs
- Create and manage SLA items including key performance indicators (KPIs), warning actions, success actions, and applicability
- Configure a timer control on a form
- Create SLA KPIs

Configure representative experience and routing (25–30%)

Configure routing

- Configure workstreams
- Configure user settings
- Manage capacity profiles
- Configure work classification and assignments, including rules
- Configure basic routing rulesets
- Configure skills-based routing and skill finder models
- Configure queues
- Configure routing for records

Configure productivity tools

- Configure scripts, including slugs
- Create macros

Configure the Copilot Service workspace

- Configure session templates
- Create experience profiles
- Configure the Inbox, including creating custom views
- Configure application tab templates

Extend Customer Service (15–20%)

Configure the data model and UI components

- Create and configure forms
- Create and configure views
- Configure model-driven app components
- Create and configure columns
- Configure alerts and in-app notifications

- Create or modify a table
- Configure relationships
- Configure Dataverse search
- Create and manage email templates

Capture customer feedback by using Customer Voice

- Trigger distribution of a survey
- Personalize a survey
- Populate survey results against cases and conversations

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Study Guide for Exam MB-240: Microsoft Dynamics 365 Field Service Functional Consultant

08/19/2025

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a free online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of September 18, 2025

Audience profile

As a candidate for this exam, you're a Microsoft Dynamics 365 Field Service functional consultant. You're responsible for implementing solutions that:

- Schedule resources to meet customer requirements.
- Optimize resources by matching skills, locations, and availability.
- Equip frontline workers with the information and tools to deliver great service.
- Build a service history of customer assets.

You're responsible for:

- Configuring the default administration areas of the Field Service application.
- Configuring resources and scheduling.
- Configuring service agreements and booking setups.
- Managing work orders, incident types, and bookings.

- Managing customer assets.
- Installing and configuring the Field Service mobile app.
- Enhancing Field Service based on customer requirements.

As a candidate, you should have a basic understanding of field service principles and the role the Field Service app plays in relationship to the Dynamics 365 suite of applications, including integration of:

- Microsoft Power Platform
- Dynamics 365 Customer Service
- Microsoft 365 apps
- Dynamics 365 Remote Assist
- Dynamics 365 Guides

You should understand:

- Industry terminology
- Field service processes
- Work order lifecycle
- Uses for Microsoft 365 Copilot in Field Service
- Best practices

Skills at a glance

- Configure field service applications (20–25%)
- Manage work orders and customer assets (25–30%)
- Schedule and dispatch work orders (15–20%)
- Manage the Field Service mobile app (5–10%)
- Manage inventory and purchasing by using the built-in inventory management system (5–10%)
- Implement Microsoft Power Platform (5–10%)

Configure field service applications (20–25%)

Configure core Field Service components

- Implement security for standard user groups
- Configure territories, postal codes, and organizational units
- Configure characteristics and proficiency models
- Implement resource roles and categories
- Configure Field Service settings
- Configure trades and trade coverages
- Configure not-to-exceed values
- Configure Copilot summary

Configure product and service pricing

- Create and configure required product and service types
- Configure minimum charge amounts and durations
- Determine how pricing rules affect the price that is applied to a product on a work order
- Associate products and services with price lists

Configure bookable resources

- Create and manage bookable resources, including frontline workers
- Configure start and end locations for resources
- Configure pay types and rates
- Configure working hours and working hour templates
- Manage time off requests
- Enable technician time tracking
- Configure facilities and equipment

Configure scheduling of multiple resources

- Configure and apply Requirement group templates
- Set up resource pools and crews
- Schedule and visualize pools, crews, and Requirement groups on the schedule board

Integrate other tools with Field Service

- Implement Dynamics 365 Remote Assist for use with Field Service
- Set up and use Dynamics 365 Remote Assist one-time call
- Use Dynamics 365 Guides with work orders
- Set up the Field Service Portal

Manage work orders and customer assets (25–30%)

Configure the work order lifecycle

- Configure work order types and work order resolutions
- Configure booking status and work order sub-status values

Create and manage work orders

- Create a work order
- Add status and sub-status information to a work order
- Organize work orders and resources by geography
- Associate a work order with a price list, service-level agreement, and entitlement
- Close a work order, including attaching a work order resolution
- Create a work order by using Microsoft 365 Copilot in Outlook

Manage incidents

- Configure incident types and suggestions
- Assign requirement group templates to incident types

- Add service tasks to incidents
- Add products and services to incidents

Create and manage agreements

- Configure agreements
- Configure automatic generation of work orders
- Configure agreement booking setup
- Configure agreement invoicing
- Create entitlements for agreements

Manage inspections

- Create inspection templates
- Associate inspections with work orders and customer assets
- Create inspections without work orders

Configure customer assets

- Create and manage customer assets
- Configure products to enable automatic creation of customer assets
- Create child assets
- Configure 3D asset models
- Create and manage functional locations
- Configure properties and property templates

Schedule and dispatch work orders (15–20%)

Manage scheduling options

- Schedule work orders by using the schedule board and schedule assistant
- Configure fulfillment preferences

- Configure quick scheduling (“quick book”)
- Configure resource requirements for multi-day scheduling
- Include appointments in scheduling

Configure, customize, and manage schedule boards

- Configure and manage schedule boards, including customizing views
- Configure the Requirements panel
- Configure schedule board settings
- Customize a schedule board

Configure the schedule assistant

- Configure schedule assistant settings
- Apply filtering constraints
- Troubleshoot the schedule assistant

Configure Universal Resource Scheduling

- Enable scheduling for a table, including configuring the metadata
- Configure geocoding for a custom table
- Configure booking timestamps, booking journals, and actuals

Manage the Field Service mobile app (5–10%)

Deliver work orders by using the mobile app

- Complete work orders, including tasks, booking statuses, follow-up work orders, signatures, images, and Field Service technician reports
- Service and maintain customer assets, including IoT devices
- Perform inspections, including adding ad hoc inspections
- Manage working offline

- Perform time entry
- Launch related apps, including Dynamics 365 Remote Assist and Guides

Set up the mobile app

- Configure security roles
- Customize the mobile app including forms, views, pages, and navigation
- Enable and configure location tracking and geofencing
- Configure mobile offline profiles, online mode, and synchronization
- Configure push notifications
- Configure barcode features
- Install the mobile app
- Configure technician service reports

Manage inventory and purchasing by using the built-in inventory management system (5–10%)

Manage inventory and warehouses

- Set up inventory and warehouses
- View product inventory
- Adjust inventory levels
- Transfer inventory between warehouses
- Manually update inventory by using inventory journals

Manage purchasing and product returns

- Create purchase orders
- Create a list of receivable products for a purchase order
- Create return merchandise authorizations

- Create return to vendor transactions
- Finalize returns

Implement Microsoft Power Platform (5–10%)

Configure model-driven apps

- Create and configure forms
- Create and configure views
- Configure navigation

Create custom apps and automations

- Create task-specific canvas apps and custom pages
- Embed apps in Field Service
- Use Power Automate cloud flows to automate tasks and enhance Field Service

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Skills measured as of April 15, 2024

Audience profile

As a candidate for this exam, you implement solutions that provide insights into customer profiles and that track engagement activities to help improve customer experiences.

You should have firsthand experience with:

- Dynamics 365 Customer Insights - Data
- Microsoft Power Query
- Microsoft Dataverse
- Microsoft Azure Data Lake Storage
- Azure Data Factory pipelines

You should also have direct experience with practices related to:

- Privacy, compliance, and consent
- Security
- Responsible AI

As a candidate for this exam, you need experience with data processes related to:

- Preparation
- Matching
- Segmentation
- Enhancement
- Deduplication

You should have a general understanding of:

- Azure Machine Learning
- Azure Synapse Analytics
- Azure architecture

Skills at a glance

- Describe Dynamics 365 Customer Insights – Data (5–10%)

- Ingest data (10–15%)
- Create customer profiles through data unification (35–40%)
- Implement AI predictions (5–10%)
- Configure measures and segments (15–20%)
- Configure third-party connections (5–10%)
- Administer Customer Insights – Data (5–10%)

Describe Dynamics 365 Customer Insights - Data (5–10%)

Describe Customer Insights - Data functionality

- Describe Customer Insights - Data components
- Describe support for near real-time updates
- Describe the differences between individual consumer and business account profiles
- Describe support for Microsoft Fabric
- Describe the tables and relationships in Customer Insights - Data
- Describe real-time ingestion capabilities and limitations
- Describe benefits of pre-unification data enrichment
- Identify when to use the managed data lake or an organization's own data lake

Describe use cases for Customer Insights - Data

- Describe use cases for Customer Insights - Data
- Describe use cases for Customer Insights - Data APIs
- Describe the integration between Customers Insights - Data and Customer Insights - Journeys
- Describe use cases for machine learning

Ingest data (10–15%)

Connect to data sources

- Attach to Microsoft Dataverse
- Attach to Azure Data Lake Storage
- Ingest and transform data by using Power Query
- Attach to Azure Synapse Analytics
- Update Unified Customer Profile fields in near real-time
- Troubleshoot common ingestion errors
- Attach to data stored in Delta Lake format
- Configure incremental refresh

Transform, cleanse, and load data

- Select tables and columns
- Resolve data inconsistencies, unexpected or null values, and data quality issues
- Evaluate and transform column data types
- Transform data from Dataverse

Create customer profiles through data unification (35–40%)

Select source fields

- Select Customer Insights tables and attributes for unification
- Describe attribute types
- Describe the requirements for a primary key

Remove duplicate records

- Deduplicate enriched tables
- Define deduplication rules, including exceptions, winner, and alternate records

- Manage merged preferences

Match conditions

- Specify a match order for tables
- Define match rules
- Define exceptions
- Include enriched tables in matching
- Configure normalization options
- Differentiate between basic and custom precision methods
- Configure custom match conditions

Unify customer fields

- Specify the order of fields for merged tables
- Combine fields into a merged field
- Combine a group of fields
- Separate fields from a merged field
- Exclude fields from a merge
- Change the order of fields
- Rename fields
- Group profiles into Clusters
- Configure customer ID generation
- Describe B2B unification

Implement business data separation

- Describe business unit separation prerequisites
- Access business data in Dataverse
- Implement Customer Insights - Data business unit integrations

Review data unification

- Review and create customer profiles
- View the results of data unification
- Verify output tables from data unification
- Update the unification settings

Configure relationships and activities

- Create and manage relationships
- Create and manage activities
- Combine customer profiles with activity data from unknown users
- Describe how to use customer consent
- Describe how to use web data for personalization
- Describe relationship paths
- Set the B2B account relationship with contacts

Configure search and filter indexes

- Define which fields should be searchable
- Define filter options for fields
- Define indexed fields

Implement AI predictions (5–10%)

Configure built-in prediction models

- Configure and evaluate the customer churn models, including the transactional churn and subscription churn models
- Configure and evaluate the product recommendation model
- Configure and evaluate the customer lifetime value model
- Configure and manage sentiment analysis

Implement machine learning models

- Describe prerequisites for using custom Azure Machine Learning models in Customer Insights - Data
- Create and manage workflows that consume machine learning models
- Describe prerequisites for using custom models from Azure Synapse Analytics in Customer Insights - Data

Configure measures and segments (15–20%)

Create and manage measures

- Create and manage tags
- Describe the different types of measures
- Create a measure
- Configure measure calculations
- Modify dimensions
- Schedule measures

Create and manage segments

- Describe methods for creating segments, including segment builder and quick segments
- Create a segment from customer profiles or measures
- Create a segment based on a prediction model
- Describe projected attributes
- Schedule segments

Find suggested segments

- Describe how the system suggests segments for use
- Create a suggested segment based on a measure

- Create a suggested segment based on activity

Create segment insights

- Configure overlap segments
- Configure differentiated segments
- Review the overlap or differentiator analysis
- Find similar customers by using AI

Configure third-party connections (5–10%)

Configure connections and exports

- Configure a connection for exporting data
- Create a data export
- Define types of exports
- Configure on demand and scheduled data exports
- Define the limitations of segment exports

Implement data enrichment

- Enrich customer profiles
- Configure and manage enrichments
- Enrich data sources before unification

Administer Customer Insights - Data (5–10%)

Create and configure environments

- Identify who can create environments
- Differentiate between trial, sandbox, and production environments
- Connect Customer Insights - Data to Dataverse

- Connect Customer Insights - Data with Azure Data Lake Storage Account
- Manage environments
- Assign user permissions
- Create an environment in Customer Insights - Data
- Manage keys in Azure key vault

Manage system refreshes

- Differentiate between system refreshes and data source refreshes
- Describe the system refresh process
- Configure a system refresh schedule
- Monitor and troubleshoot refreshes

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Skills measured prior to April 15, 2024

Audience profile

As a candidate for this exam, you implement solutions that provide insights into customer profiles and that track engagement activities to help:

- Improve customer experiences.
- Increase customer retention.

You should have firsthand experience with:

- Dynamics 365 Customer Insights - Data and one or more additional Dynamics 365 apps
- Microsoft Power Query
- Microsoft Dataverse
- Common Data Model
- Microsoft Power Platform

You should also have direct experience with practices related to:

- Privacy
- Compliance
- Consent
- Security
- Responsible AI
- Data retention policy

As a candidate for this exam, you need experience with processes related to key performance indicators (KPIs), data retention, validation, visualization, preparation,

matching, fragmentation, segmentation, and enhancement. You should have a general understanding of:

- Azure Machine Learning
- Azure Synapse Analytics
- Azure Data Factory

Skills at a glance

- Design Dynamics 365 Customer Insights - Data solutions (5–10%)
- Ingest data into Customer Insights - Data (10–15%)
- Create customer profiles through data unification (30–35%)
- Implement AI predictions in Customer Insights - Data (5–10%)
- Configure measures and segments (10–15%)
- Configure third-party connections (10–15%)
- Administer Customer Insights - Data (5–10%)

Design Dynamics 365 Customer Insights - Data solutions (5–10%)

Describe Customer Insights - Data

- Describe Dynamics 365 Customer Insights - Data components, including tables, relationships, enrichments, activities, measures, and segments
- Describe the first run experience (FRE) in D365 Customer Insights - Data
- Describe support for near real-time updates
- Describe support for enrichment
- Describe the differences between individual consumer and business account profiles.

Describe use cases for Customer Insights - Data

- Describe use cases for Dynamics 365 Customer Insights - Data

- Describe use cases for extending Customer Insights - Data by using Microsoft Power Platform components
- Describe use cases for Customer Insights - Data APIs
- Describe use cases for working with business accounts

Ingest data into Customer Insights - Data (10–15%)

Connect to data sources

- Determine which data sources to use
- Determine whether to use the managed data lake or an organization's data lake
- Attach to a Microsoft Dataverse data lake
- Attach to Azure Data Lake Storage
- Ingest and transform data using Power Query connectors
- Attach to Azure Synapse Analytics
- Describe real-time ingestion capabilities and limitations
- Describe benefits of pre-unification data enrichment
- Ingest data in real-time
- Update Unified Customer Profile fields in real-time
- Understand common ingestion errors

Transform, cleanse, and load data by using Power Query

- Select tables and columns
- Resolve data inconsistencies, unexpected or null values, and data quality issues
- Evaluate and transform column data types

Configure incremental refreshes for data sources

- Identify data sources that support incremental updates
- Configure incremental refresh

- Identify capabilities and limitations for scheduled refreshes
- Configure scheduled refreshes and on-demand refreshes

Create customer profiles through data unification (30-35%)

Select source fields

- Select Customer Insights tables and attributes for unification
- Select attribute types
- Select the primary key

Remove duplicate records

- Deduplicate enriched tables
- Define deduplication rules
- Review deduplication results

Match conditions

- Specify a match order for tables
- Define match rules
- Define exceptions
- Include enriched tables in matching
- Configure normalization options
- Differentiate between basic and custom precision methods

Unify customer fields

- Specify the order of fields for merged tables
- Combine fields into a merged field
- Combine a group of fields

- Separate fields from a merged field
- Exclude fields from a merge
- Change the order of fields
- Rename fields
- Group profiles into Clusters

Implement business data separation

- Understand business unit separation prerequisites
- Access business data in Dataverse
- Implement Customer Insights - Data business unit integrations

Review data unification

- Review and create customer profiles
- View the results of data unification
- Verify output tables from data unification
- Update the unification settings

Configure relationships and activities

- Create and manage relationships
- Create activities by using a new or existing relationship
- Create activities in real-time
- Manage activities
- Combine customer profiles with activity data from unknown users
- Display Customer Insights - Data Activities in D365 Activity Timeline

Create a unified contact profile for B2B accounts

- Create unified contact profile

- Set the relationship between contacts and accounts
- Define the semantic fields
- Review contact unification
- Verify output tables from data unification

Configure search and filter indexes

- Define which fields should be searchable
- Define filter options for fields
- Define indexes

Implement AI predictions in Customer Insights - Data (5–10%)

Use Copilot in Customer Insights - Data

- Understand key Discovery page components

Configure prediction models

- Configure and evaluate the customer churn models, including the transactional churn and subscription churn models
- Configure and evaluate the product recommendation model
- Configure and evaluate the customer lifetime value model
- Create a customer segment based on prediction model
- Configure and manage sentiment analysis

Implement machine learning models

- Describe prerequisites for using custom Azure Machine Learning models in Customer Insights - Data
- Use a wizard to bring custom prediction models to Customer Insights - Data
- Implement workflows that consume machine learning models

- Manage workflows for custom machine learning models

Configure measures and segments (10–15%)

Create and manage measures

- Create and manage tags
- Describe the different types of measures
- Create a measure
- Create a measure by using a template
- Configure measure calculations
- Modify dimensions
- Schedule Measures

Create and manage segments

- Create and manage tags
- Describe methods for creating segments, including segment builder and quick segments
- Create a segment from customer profiles, measures, or AI predictions
- Create a segment based on a prediction model
- Find similar customers
- Project attributes
- Track usage of segments
- Export segments

Find suggested segments

- Describe how the system suggests segments for use
- Create a segment from a suggestion
- Create a suggested segment based on activity

- Configure refreshes for suggestions

Create segment insights

- Configure overlap segments
- Configure differentiated segments
- Analyze insights
- Find similar segments with AI

Configure third-party connections (10–15%)

Configure connections and exports

- Configure a connection for exporting data
- Create a data export
- Define types of exports
- Configure on demand and scheduled data exports
- Define the limitations of segment exports

Export data to Dynamics 365 Customer Insights – Journeys or Dynamics 365 Sales

- Identify prerequisites for exporting data from Dynamics 365 Customer Insights - Data
- Create connections between Dynamics 365 Customer Insights - Data and Dynamics 365 apps
- Define which segments to export
- Export a Dynamics 365 Customer Insights - Data segment into Dynamics 365 Customer Insights - Journeys as a marketing segment
- Use Dynamics 365 Customer Insights - Data profiles and segments with real-time marketing

- Export a Dynamics 365 Customer Insights - Data profile into Dynamics 365 Customer Insights - Journeys for customer journey orchestration
- Export a Dynamics 365 Customer Insights - Data segment into Dynamics 365 Sales as a marketing list
- Display Customer Insights - Data data from within Dynamics 365 apps
  Identify what data from Dynamics 365 Customer Insights - Data can be displayed within Dynamics 365 apps Configure the Customer Card add-in for Dynamics 365 apps
- Identify permissions required to implement the Customer Card Add-in for Dynamics 365 apps

Implement Data Enrichment

- Enrich customer profiles
- Configure and manage enrichments
- Enrich data sources before unification
- View enrichment results

Use Customer Consent data

- Add Consent Data to Customer Insights - Data
- Use Consent Data

Use Customer Insights - Data data across Power Platform and M365 applications

- Use D365 Customer Insights - Data chatbot for Microsoft Teams
- Connect Power Apps and Dynamics 365 Customer Insights - Data
- Use the Power Automate Connector for Dynamics 365 Customer Insights - Data
- Configure the Dynamics 365 Customer Insights connector for Power BI - Data

Administer Customer Insights - Data (5–10%)

Create and configure environments

- Identify who can create environments
- Differentiate between trial and production environments
- Connect Customer Insights - Data to Microsoft Dataverse
- Connect Customer Insights - Data with Azure Data Lake Storage Account Manage existing environments
- Change or claim ownership of the environment
- Reset an existing environment
- Delete an existing environment
- Configure user permissions
- Describe available user permissions
- Export diagnostic logs

Manage system refreshes

- Differentiate between system refreshes and data source refreshes
- Describe refresh policies
- Configure a system refresh schedule
- Monitor and troubleshoot refreshes

Create and manage connections

- Describe when connections are used
- Configure and manage connections

Study guide for Exam MB-280: Microsoft Dynamics 365 Customer Experience Analyst

08/25/2025

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

About the exam

Languages

Some exams are localized into other languages. You can find these in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of September 24, 2025

Audience profile

As a candidate for this exam, you configure solutions using Microsoft Dynamics 365 customer experience apps. You understand:

- An organization's sales processes and the seller's perspective.
- AI-driven features to enhance seller efficiency.
- End-to-end marketing functions and how they support sales.

You streamline business processes, improve automation, and accelerate sales operations. You are responsible for:

- Configuring the standard and premium features of Dynamics 365 Sales.
- Implementing collaboration tools to enhance teamwork.
- Managing the security model.
- Tailoring Dynamics 365 Sales to business needs.
- Extending functionality with Microsoft Power Platform.
- Supporting sales processes using Dynamics 365 Customer Insights - Journeys.

You should have proficiency in Dynamics 365 Sales and are familiar with:

- Microsoft Dataverse
- Microsoft Power Apps
- Microsoft Power Automate cloud flows
- Dynamics 365 Customer Insights - Journeys

- Dynamics 365 Customer Insights - Data

Skills at a glance

- Implement Dynamics 365 Sales (30–35%)
- Configure and customize Dataverse and model-driven apps (35–40%)
- Demonstrate Dynamics 365 Customer Insights capabilities (10–15%)
- Extend and enhance Dynamics 365 Sales capabilities (10–15%)

Implement Dynamics 365 Sales (30–35%)

Configure core functionality of Dynamics 365 Sales

- Enable and configure predictive lead and opportunity scoring
- Configure the lead qualification experience
- Configure the opportunity pipeline view
- Interpret the Sales Pipeline chart
- Configure and deploy the Sales mobile app
- Configure Copilot in Sales capabilities
- Demonstrate sales order processing, including quotes, orders, and invoices
- Configure lead and opportunity status reasons
- Configure opportunity close
- Configure automatic creation rules for leads
- Create and manage sales territories

Set up the product catalog

- Configure product catalog settings
- Differentiate the product catalog components
- Manage the product lifecycle, including creating, revising, cloning, and retiring

- Customize the enhanced experience for adding products
- Create product bundles
- Create product families
- Create price lists, discount lists, and product pricing

Configure goals and forecasting

- Create and edit goals
- Configure rollup queries
- Manage forecasts
- Build forecasts from templates

Configure and use Sales Insights

- Configure and use the assistant
- Differentiate standard and premium Sales Insights features
- Configure relationship analytics and improve relationship health
- Recommend conversation intelligence settings

Configure sales engagement

- Configure the Sales accelerator for an organization and users
- Customize the workspace
- Manage the sales pipeline by using the work list
- Configure the Sales accelerator record types
- Create and manage sequences
- Create and manage assignment rules
- Configure lead and opportunity segments
- Configure Work assignment
- Connect sequences to records

Configure and customize Dataverse and model-driven apps (35–40%)

Perform tasks and manage settings in the Power Platform Environment Settings app

- Create and manage email templates
- Create and manage Word templates
- Create and manage Excel templates
- Configure duplicate detection

Configure Dataverse table components

- Create or modify a table
- Create or modify fields
- Configure relationship behaviors
- Configure auditing of data
- Configure connections and connection roles

Implement business logic

- Configure business rules
- Configure formula and rollup columns
- Implement business process flows
- Use the Dataverse connector in a cloud flow

Customize the user experience

- Differentiate form and view types
- Configure the timeline control
- Embed Power BI dashboard, reports, and tiles
- Create and configure model-driven apps

- Differentiate between types of Power Apps
- Create and configure visualizations for model-driven apps

Manage security

- Implement hierarchy security
- Manage security roles
- Create and manage owner and access teams
- Share a model-driven app
- Evaluate security privileges by using access checker
- Manage Microsoft Entra ID groups in Dataverse
- Diagnose user access issues
- Create and manage column security profiles and column-level security

Demonstrate Dynamics 365 Customer Insights capabilities (10–15%)

Configure core functionality of Dynamics 365 Customer Insights - Journeys

- Create and personalize marketing emails by using templates and email editor
- Create a journey
- Create marketing forms
- Create and manage text messages in journeys
- Create marketing segments
- Create journeys using unified profiles and segments from Dynamics 365 Customer Insights - Data
- Configure consent management including Compliance Profiles and Consent Center
- Differentiate segments in Dynamics 365 Sales, Customer Insights - Journeys, and Customer Insights - Data

Create and manage events

- Create an event
- Create and manage event registration forms
- Manage registration, waitlists, and attendees

Extend and enhance Dynamics 365 Sales capabilities (10–15%)

Implement collaboration features

- Configure document management
- Configure Teams calling and dialer
- Configure Teams collaboration

Manage sales data and interactions in Outlook

- Perform common tasks including tracking records, creating records, adding sales literature and knowledge articles, and applying email templates
- Customize the Dynamics 365 App for Outlook

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Study guide for Exam MB-310: Microsoft Dynamics 365 Finance Functional Consultant

06/26/2025

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a free online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 25, 2025

Audience profile

As a candidate for this exam, you analyze business requirements and translate them into fully realized business processes and solutions that implement industry-recommended practices. You have a fundamental understanding of accounting principles and financial operations as they relate to:

- Core tasks in the finance and operations apps
- Manufacturing
- Retail
- Supply chain management operations

As a candidate for this exam, you specialize in one or more feature sets of Dynamics 365 Finance including:

- General ledger
- Accounts payable
- Accounts receivable

- Credit and collections
- Cash and bank management
- Budgeting
- Fixed assets
- Asset leasing
- Tax
- Expense management
- Subscription billing
- Cost accounting
- Cost management
- Consolidation and elimination

Skills at a glance

- Implement financial management (40–45%)
- Implement accounts receivable, credit, collections, and subscription billing (15–20%)
- Implement and manage accounts payable and expenses (10–15%)
- Manage budgeting (10–15%)
- Manage fixed assets (10–15%)

Implement financial management (40–45%)

Design and configure the chart of accounts

- Design and configure financial dimensions
- Design and configure the chart of accounts and main accounts
- Configure main accounts categories, ledger account aliases, and balance control accounts
- Configure legal entity overrides for financial dimensions and main accounts
- Configure and manage account structures and advanced rules

- Design and configure financial tags

Configure ledgers and currencies

- Configure currency exchange types and rates
- Configure a currency revaluation posting profile
- Configure accounting and reporting currencies

Implement and manage journals

- Configure journal names and vouchers
- Configure journal controls and posting restriction rules
- Implement journal approvals, including workflows
- Configure and use periodic journals
- Configure intercompany accounting
- Create templates to edit journals in Microsoft Excel
- Reverse financial transaction entries
- Configure default descriptions
- Create and use journal entries, including validation and posting manually and by using Microsoft Excel
- Configure batch processing of journals

Implement and manage cash and bank

- Create and manage bank groups and bank accounts
- Configure payment formats
- Configure bank reconciliations, including advanced bank reconciliations
- Configure the cash flow forecast setup, including automation setup
- Perform bank foreign currency revaluation
- Process manual and advanced bank reconciliations

- Configure shared payment setup for customers and vendors
- Configure and process customer and vendor netting

Perform periodic processes

- Design and configure periodic closing processes and end-of-year processes, including main accounts, reports, and templates
- Perform financial consolidation and elimination processes by using Consolidation online
- Create and manage financial reports, including modifying row, column, and report definitions, and reporting trees
- Design and configure financial period workspaces and closing schedules
- Design and configure legal entity for consolidation and elimination by using Consolidation online
- Design consolidation and elimination by using financial reports
- Configure and process ledger settlements
- Perform general ledger foreign currency revaluation
- Manage the ledger calendar

Configure, collect, and report taxes

- Configure tax groups, tax codes, settlement periods, and authorities
- Configure tax ledger posting groups
- Settle and post sales tax
- Configure withholding tax groups, tax codes, and authorities
- Calculate and adjust sales tax

Implement cost management

- Configure cost groups
- Configure inventory costing versions
- Differentiate between inventory costing methodologies

- Configure item model groups
- Configure item groups and inventory posting profiles
- Perform inventory recalculation, closing, and adjustment processes

Implement accounts receivable, credit, collections, and subscription billing (15–20%)

Implement and manage accounts receivable

- Configure customers and customer groups, including configuring shared customers
- Configure and process free text invoices, including recurring free text invoices
- Process sales order invoices and credit memos
- Configure customer payment methods
- Configure accounts receivable charges and apply changes to an invoice
- Manage customer holds
- Configure customer posting profiles
- Process customer payments
- Configure customer change approvals
- Perform accounts receivable foreign currency revaluation
- Configure and use billing classification
- Configure batch processing of free text and sales order invoicing
- Configure bank accounts for customers

Manage credit and collections

- Configure credit management processes
- Configure collections management processes, including collection activities
- Manage delinquent customers
- Prepare and send customer account statements

- Configure and process collection letters
- Configure aging definitions and process aged balances
- Process and manage credit holds
- Configure and use customer write-offs
- Configure and process interest notes

Configure and manage subscription billing

- Generate sales documents by using billing schedules
- Manage billing schedules, including price update and hold termination
- Configure contract billing, including billing schedule group, item group, and milestone setup
- Configure and use revenue deferrals and recognition, including for charges, deferral defaults, and items deferred by default
- Configure and use expense deferrals and recognition
- Process and manage revenue and expense recognition schedules

Implement and manage accounts payable and expenses (10–15%)

Implement and manage accounts payable

- Configure invoice validation policies and invoice matching setup
- Configure vendor groups, vendors, and vendor posting profiles, including configuring shared vendors
- Process purchase order invoices and credit memos, including prepayments
- Configure vendor payment methods
- Configure accounts payable charges, and apply changes to an invoice
- Configure bank accounts and bank account approvals for vendors
- Configure vendor change approvals

- Perform accounts payable foreign currency revaluation
- Configure vendor invoice automation
- Process the vendor invoice journal including voyage cost
- Configure and use recurring vendor invoices
- Process and generate vendor payments, centralized payments, and prepayments

Configure and use expense management

- Configure expense management including categories, per diem options, mileage expenses, intercompany expenses, and personal expenses
- Create and manage expense reports

Manage budgeting (10–15%)

Implement basic budgeting

- Configure budgeting components, including budget models, codes, allocation terms, and transfer rules
- Create and manage budget register entries
- Compare budgeted values with actual values

Configure and manage budget controls

- Configure budget controls including budget parameters, budget fund availability options, budget control rules and groups, and over-budget permissions
- Activate or deactivate budget control configurations

Manage fixed assets (10–15%)

Implement and manage fixed assets

- Create and manage fixed asset groups and other fixed asset attributes
- Configure fixed asset posting profiles

- Configure fixed asset parameters
- Configure fixed asset books
- Configure depreciation profiles
- Create and manage fixed assets
- Configure mapping for fixed asset groups and books

Process fixed asset transactions

- Process fixed asset disposal (sales) by using free text invoices
- Process fixed asset acquisitions by using purchase orders, journals, inventory journals, and projects
- Create fixed asset budgets and transfer the budgets to the budgeting module
- Process fixed asset depreciation
- Process fixed asset disposals and other transactions by using the fixed asset journal
- Process fixed asset split, reclassification, and transfer
- Process acquisition and depreciation for derived books

Skills measured as of June 20, 2025

Audience profile

As a candidate for this exam, you design solutions and configure Dynamics 365 Supply Chain Management to meet the business requirements for a customer. You understand the end-to-end processes of supply chain management and can identify system capabilities and features that can be used to implement system functionality using industry-recommended practices.

You possess knowledge of supply chain management operations and implementing Dynamics 365 Supply Chain Management features, including:

- Product information management
- Sales processes
- Procurement processes
- Vendor collaboration
- Inventory processes
- Quality management
- Warehouse management

- Warehouse Management mobile app
- Master planning and planning optimization
- Asset management
- Transportation management
- Landed cost
- Copilot in Dynamics 365 Supply Chain Management

As a candidate, you:

- Analyze business requirements across multiple areas.
- Map requirements to system capabilities and design reliable, scalable solutions.
- Identify and manage dependencies between processes.
- Apply industry-recommended practices to implementations.

You deliver effective solutions that meet or exceed the needs of your customers by partnering with:

- Solution architects
- Developers
- Consultants
- Business users
- Project managers
- Other stakeholders

Skills at a glance

- Implement product information management (25–30%)
- Implement inventory and asset management (20–25%)
- Implement and manage supply chain processes (15–20%)
- Implement warehouse management and transportation management (20–25%)
- Implement master planning (10–15%)

Implement product information management (25–30%)

Create and manage products

- Create and release products and product variants
- Create and apply product templates
- Create bills of materials (BOMs) and BOM versions
- Create and configure category hierarchies
- Create and manage product states during the lifecycle of a product
- Create and manage product attributes

Configure prerequisites for products

- Configure inventory dimensions, including storage, tracking, and product dimension groups
- Configure item model groups
- Configure reservation hierarchies
- Configure unit sequence groups

Configure additional product details

- Create and assign bar codes and Global Trade Item Number (GTIN) codes
- Configure product unit conversions
- Configure default order settings
- Configure product filter codes for warehouse operations

Manage inventory pricing and costing

- Configure and maintain costing versions for standard and planned costs
- Configure price groups
- Configure items with standard costs

- Configure default item prices, purchase and sales prices, and discounts in trade agreements

Implement inventory and asset management (20–25%)

Manage and process inventory activities

- Create and process journals, including BOMs, item arrival, output order, transfer, movement, inventory adjustment, and counting journals
- Create and process transfer orders
- Configure and manage the inventory closing and adjustment process
- Apply and remove inventory blocking manually
- Create batch disposition codes
- Configure and run inventory reports including ABC classification

Manage quality

- Configure and process nonconformances
- Configure quality associations
- Configure components for the quality control process
- Process quality orders
- Process quarantine orders

Configure asset management

- Create and manage work orders
- Create and configure assets and asset types
- View and manage capacity for work orders
- Configure work order settings
- Schedule preventive maintenance and reactive maintenance
- Manage and configure asset loans

- Create and configure asset lifecycle models and states

Implement asset management

- Configure maintenance plans
- Configure functional locations
- Manage maintenance requests
- Manage work order consumption
- Manage work order scheduling

Implement and manage supply chain processes (15–20%)

Implement procurement and sourcing

- Create and maintain vendors
- Create and manage purchase requisitions, requests for quotation (RFQs), and purchase orders (POs)
- Create purchase agreements and vendor rebates
- Configure and process consignment inventory
- Manage over and under deliveries and delivery schedules
- Configure procurement categories, charge codes, and purchasing policies
- Configure vendor collaboration features
- Create and process vendor returns
- Manage registration and product receipt
- Configure procurement workflows

Implement landed cost

- Configure landed cost parameters and voyage statuses
- Create and process voyage with purchase orders or transfer orders

- Configure cost estimations, tracking control center, over/under tolerance setup, and journey templates
- Configure cost type codes and auto-costs
- Track inbound voyages and shipping container journeys

Implement common sales and marketing features

- Create and maintain customers
- Configure sales agreements
- Configure and process sales quotations, sales orders, reservations, and sales returns
- Configure sales groups and commissions
- Configure and process intercompany orders
- Configure and process customer rebates
- Configure and manage delivery schedule, available-to-promise (ATP), and capable-to-promise (CTP)
- Configure and use product bundles

Implement warehouse management and transportation management (20–25%)

Configure warehouse management

- Create sites, warehouses, locations, location formats, location profiles, location types, and zones
- Configure work policies and work breaks
- Implement location directives
- Configure wave, load, and work templates
- Create and print labels, including product, wave, GS1 label segments, and license plate labels
- Configure packing dimensions

- Configure inbound receiving process
- Configure outbound shipment process
- Configure and update inventory status

Perform warehouse management processes

- Configure and process replenishment
- Manage inbound and outbound load planning workbench
- Configure and process inventory movements via warehouse work
- Create cycle counting work and perform cycle counting
- Process inbound and outbound orders by using the Warehouse Management mobile app
- Configure containerization and packaging options
- Configure and process cross docking

Implement transportation management

- Configure shipping carriers and carrier groups
- Perform planning and executing of loads and shipments
- Configure and generate freight bills and invoices
- Configure route plans and guides
- Manage route and rate engines
- Configure and use dock appointment scheduling
- Reconcile freight by using manual or automatic processes

Implement the Warehouse Management mobile app

- Configure mobile device menus, menu items, and display settings
- Configure detours for mobile device steps
- Install and configure the Warehouse Management mobile app
- Create and manage warehouse workers for the Warehouse Management mobile app

-

Implement master planning (10–15%)

Configure master planning

- Set up coverage groups and item coverage
- Configure and maintain master planning parameters and master plans
- Define positive and negative days
- Define action messages, delay, and time fences
- Configure period templates

Manage master plans

- Run master planning and analyze the results
- Evaluate and process planned purchase and transfer orders
- Set up and use the Supply Schedule form
- Configure safety margins
- Configure and process safety stock journals

Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a free online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. Although Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of June 20, 2025

Audience profile

As a candidate for this exam, you design solutions and configure Dynamics 365 Supply Chain Management to meet complex business requirements for a customer. You have a deep understanding of the end-to-end processes of supply chain management and can identify advanced system capabilities and features that can be used to implement system functionality using industry recommended practices.

You possess advanced knowledge of supply chain management operations and implementing Dynamics 365 Supply Chain Management features for complex scenarios, including:

- Product information management
- Production control (costing, subcontracting, manufacturing execution, production scheduling)
- Production methods (discrete, process, lean)
- Engineering change management
- Master planning and planning optimization for advanced scenarios

- Vendor rebates
- Service management
- Mixed reality technologies
- Copilot in Dynamics 365 Supply Chain Management

As a candidate, you:

- Analyze complex business requirements across multiple areas
- Map requirements to system capabilities and design reliable, scalable solutions
- Identify and manage dependencies between processes
- Apply industry-recommended practices to implementations

You deliver effective solutions that meet or exceed the needs of your customers by partnering with:

- Solution architects
- Developers
- Consultants
- Business users
- Project managers
- Other stakeholders

Prior to taking MB-335, it is highly recommended to take MB-330, which focuses on core supply chain management operations and features in Dynamics 365.

Skills at a glance

- Configure products (20–25%)
- Configure production prerequisites (20–25%)
- Implement production methods (20–25%)
- Configure and manage production control (15–20%)
- Implement additional supply chain management features (10–15%)

Configure products (20–25%)

Implement advanced product information features

- Configure formula items, planning items, co-products, and by-products
- Configure catch weight items including handling policies
- Configure inventory batches, batch attributes, and lot inheritance
- Manage product compliance including regulated and restricted items
- Create and implement configuration groups and routes for dimension-based products
- Manage products with dimension-based configurations
- Configure advanced export control functionality, excluding Power Fx formulas
- Configure and manage hazardous materials

Implement constraint-based product configuration models

- Create and manage product configuration model components and subcomponents
- Create calculations for product configuration models, including configuration using tables and/or expressions
- Configure BOM lines and route operations for a product configuration model
- Configure and manage pricing for configuration models
- Validate, approve, and test product configuration models

Implement engineering change management

- Design an engineering product lifecycle
- Configure engineering categories
- Configure product readiness policies and product release policies
- Create an engineering product with engineering attributes
- Release engineering products to a local company
- Create and process engineering change requests and change orders

Configure production prerequisites (20–25%)

Configure resources, routes, and calendars

- Implement and manage work calendars and working time
- Create and configure resource capabilities
- Implement and manage resources and resource groups
- Create and manage operations and routes, including routes to manage scrap

Configure production settings and processes

- Create production units, production groups, production pools, and production journal names
- Manage reservations in production process, including partial reservations and re-reservations
- Configure warehouse processes for raw materials picking and finished goods put away
- Design a unified (mixed mode) manufacturing process
- Configure production control parameters

Implement costing

- Configure costing sheets and indirect costs
- Configure and manage cost groups, costing versions, and cost categories
- Configure cost allocations for co-products and burden allocation for by-products
- Configure and perform BOM/formula calculations
- Calculate and activate item cost prices
- Configure production posting profiles
- Analyze common sources of production variances
- View and analyze production costing

Implement production methods (20–25%)

Implement discrete manufacturing

- Manage production order lifecycle stages including create, estimate, schedule, release, start
- Create and process picking list journals
- Create and process job card and route card journals
- Create and process reports as finished journals
- Reset the status of a production order
- Configure and manage production-related reservations
- Configure bills of material (BOM) and BOM versions
- Manage production order lifecycle stages including report as finished and end
- Configure and use mobile device to start, report as finish, and register material consumption in production
- Configure error quantity posting using allocation or ledger account in production
- Substitute materials in the manufacturing process

Implement process manufacturing

- Configure batch reservations and release to warehouse process
- Configure consolidated batch order processes
- Manage batch balancing and batch order sequencing
- Configure formulas features
- Create and process report as finished journals with co-products and by-products
- Create and process batch orders and rework batch order
- Configure formulas and formula versions

Implement lean manufacturing

- Create value streams and production flows
- Create kanban rules

- Process and manage kanban orders by using kanban boards

Configure and manage production control (15–20%)

Implement subcontracting

- Implement subcontracting for discrete and process manufacturing
- Configure BOM and formula lines, resources, routes, and warehouses for subcontracting items
- Manage service items and prices for subcontracting
- Create and process purchase orders for subcontracting
- Create and process transfer orders for subcontracting

Implement manufacturing execution

- Configure time and attendance prerequisites and activate workers for time registration
- Configure manufacturing execution features including production floor execution interface
- Process production and batch orders by using production floor execution interface
- Calculate and approve time registrations

Implement production scheduling and capacity planning

- Configure scheduling parameters
- View, monitor, and update production schedules
- Configure capacity for production resources including machines, labor, and tooling
- Configure infinite and finite scheduling and capacity
- Set up and run operations and job scheduling
- Configure and use Gantt to schedule production jobs

Implement additional supply chain management features (10–15%)

Implement Rebate management

- Configure Rebate management parameters
- Manage rebate reduction principles
- Process, review, and post rebates

Implement advanced master planning scenarios

- Evaluate and process planned production and kanban orders
- Configure intercompany master planning
- Configure forecast models, plans, and parameters
- Run demand forecasting and adjust as appropriate
- Execute explosion and validate results
- Configure supply chain calendars
- Configure Demand Driven Material Requirements Planning (DDMRP)
- Configure the Planning Optimization Add-in for Microsoft Dynamics 365 Supply Chain Management
- Create and manage demand forecast lines

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Skills measured as of January 30, 2026

Audience profile

As a candidate for this exam, you're a developer who works with finance and operations apps in Microsoft Dynamics 365 to implement and extend applications that meet the requirements of a business. You provide fully realized solutions by using:

- Standardized application coding patterns
- Extensible features
- External integrations

As a candidate for this exam, you do the following:

- Develop business logic by using X++.
- Create and modify finance and operations app reports and workspaces.
- Customize the UI.
- Provide endpoints and APIs to support Microsoft Power Platform apps and external systems.
- Perform testing.
- Monitor performance.

- Analyze and manipulate data.
- Manage implementations by using application lifecycle management (ALM).

You also create technical designs, specify implementation details, and implement security requirements.

You should have a deep knowledge and experience using the underlying framework, data structures, and objects associated with the finance and operations solutions.

You should have experience with products and services that include Microsoft Visual Studio, Azure, Power Platform, Azure DevOps (including version control tools like Team Foundation Version Control [TFVC] and Git), Lifecycle Services tools, Power Platform admin center, Implementation portal, Copilot, Postman, Microsoft 365, reporting tools (for example, SQL Server Reporting Services [SSRS], Power BI), and SQL Server Management Studio.

Skills at a glance

- Plan the architecture and solution design (5–10%)
- Apply developer tools (5–10%)
- Design and develop AOT elements (15–20%)
- Develop and test code (20–25%)
- Implement reporting (10–15%)
- Integrate and manage data solutions (15–20%)
- Implement security and optimize performance (10–15%)

Plan the architecture and solution design (5–10%)

Plan for the major components of finance and operations apps

- Differentiate between the cloud and on-premises versions of finance and operations apps
- Extend the functionality of finance and operations apps into the Microsoft ecosystem

Implement application lifecycle management (ALM)

- Manage environments by using Lifecycle Services tools and components

- Research and resolve issues by using Issue Search
- Perform activities that require asset libraries
- Manage package deployments between environments
- Manage Unified Developer Experience (UDE) developer environments in Power Platform admin center
- Manage environments by using the Implementation portal

Apply developer tools (5–10%)

Customize finance and operations apps by using Visual Studio

- Create and manage extension models
- Manage metadata by using Application Explorer
- Synchronize data dictionary changes with the application database
- Create elements by using element designers
- Perform debugging activities

Manage source code and artifacts by using Microsoft Azure DevOps version control

- Create, check out, review, and check in code
- Maintain project artifacts
- Branch and merge code
- Compare code and resolve version conflicts
- Choose a version control system
- Implement continuous integration and continuous delivery (CI/CD)

Design and develop AOT elements (15–20%)

Create and extend UI elements

- Create and extend forms
- Create and extend menus and menu items
- Create and use label files

Create and extend the data model

- Create and extend tables
- Create and extend views, queries, and maps
- Create and extend data entities

Create classes and extend AOT elements

- Create and extend classes
- Add event handler methods to a class
- Add attributes or modifiers to a class

Develop and test code (20–25%)

Develop X++ code

- Implement common structured programming constructs of X++
- Create, read, update, and delete (CRUD) data
- Implement global functions in X++
- Resolve best practice warnings

Develop object-oriented code

- Implement variable scoping
- Implement inheritance and abstraction concept
- Implement query objects and the QueryBuilder class
- Implement attribute classes
- Implement Chain of Command (CoC)

- Assess the extensibility of code and avoid breaking changes
- Implement event handler classes and delegates

Implement finance and operations app framework functionality

- Implement the SysOperation framework
- Implement the workflow framework
- Implement the SysExtensionSerializer framework

Perform testing

- Create unit tests by using the SysTest framework and Task recorder
- Run unit tests in Test Explorer

Implement reporting (10–15%)

Select reporting tools in finance and operations apps

- Create and modify report data sources and supporting classes
- Implement reporting security requirements
- Differentiate among reporting datastores

Design, create, and revise Dynamics 365 reports

- Determine when to use a specific reporting tool or platform
- Create, modify, and deploy reports in finance and operations apps by using SSRS
- Create and modify finance and operations apps reports by using Power BI
- Create and modify finance and operations apps reports by using Microsoft Excel
- Create and modify finance and operations apps reports by using Electronic reporting

Design, create, and revise Dynamics 365 workspaces

- Design and implement key performance indicators (KPIs)

- Create drill-through workspace elements
- Implement Power BI visualizations

Integrate and manage data solutions (15–20%)

Evaluate data integration patterns and scenarios

- Contrast data integration patterns
- Select an appropriate data integration API
- Differentiate between synchronous and asynchronous patterns

Implement data integration concepts and solutions

- Consume external web services by using RESTful APIs and Simple Object Access Protocol (SOAP)
- Implement Electronic reporting integrations
- Implement custom services
- Implement Batch OData API

Implement data management

- Import and export data using entities between finance and operations apps and other systems
- Import and export data using composite and aggregate data entities
- Monitor the status and availability of entities
- Enable change tracking for entities
- Set up a data project, including entity sequencing and recurring data jobs
- Generate and modify field mapping between source, staging, and target

Integrate with Microsoft Power Platform, Microsoft 365, and Azure

- Integrate Microsoft Dataverse with finance and operations apps by using dual-write

- Integrate Microsoft Dataverse with finance and operations apps by using virtual entities
- Integrate Power Platform with finance and operations apps
- Integrate finance and operations apps with Microsoft Excel by using OData
- Implement business events
- Implement Azure Key Vault

Implement security and optimize performance (10–15%)

Implement security policies and requirements

- Create and extend duties and roles
- Create privileges and add permissions
- Enforce security policies
- Implement Extensible Data Security (XDS) policies

Apply fundamental performance optimization techniques

- Apply caching mechanisms for tables and forms
- Implement global cache and singleton
- Create and modify temporary tables for optimization purposes
- Assess when to use set-based queries or row-based queries
- Modify queries to optimize performance
- Modify variable scope to optimize performance
- Analyze and optimize concurrency

Optimize performance

- Capture traces, and analyze traces by using Trace Parser
- Optimize performance for data entities, data source queries, batch processes, and reports
- Implement Async and Sandbox frameworks

- Create and modify indexes for tables and views

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of October 9, 2025

Audience profile

Candidates for this exam are Microsoft Dynamics 365 Finance, Supply Chain Management, and Commerce professionals who advise stakeholders and translate business requirements into secure, scalable, and reliable solutions.

Candidates should have knowledge of the Dynamics 365 ecosystem and Microsoft Power Platform. They must have deep understanding of finance and operations apps, and Copilot and AI agents used in the finance and operations apps. In addition, they must have extensive domain knowledge in one or more industry verticals. This role requires understanding how decisions affect the overall solution.

Skills at a glance

- Architect solutions (25–30%)
- Define solution strategies (45–50%)
- Manage implementations (10–15%)
- Manage testing (15–20%)

Architect solutions (25–30%)

Gather requirements

- Identify operational and organizational challenges that may affect a business
- Identify existing business processes and opportunities to optimize business processes
- Gather data migration requirements and expected data migration volumes
- Categorize business requirements and perform gap fit analyses
- Review and validate business requirements throughout the solution lifecycle

Define the solution architecture

- Map business requirements to functional components and business process catalog
- Evaluate whether to build versus buy for gap business requirements
- Identify solution components including other Microsoft and independent software vendor (ISV) technologies based on customer requirements
- Describe the Success by Design framework
- Create overall solution architecture diagrams

Describe and document the solution blueprint

- Review an organization including company information, locations, and organizational hierarchy in finance and operations apps
- Document the implementation timeline including roll-out strategies
- Define the business process catalog and document solution gaps
- Define instances, environments, and solution components
- Identify required security strategy

Define solution strategies (45–50%)

Select a deployment strategy

- Review a process to manage solution code and deployment
- Select a deployment model and identify instances and environments required for the selected deployment model
- Plan the One Version strategy and release process for service updates
- Segment solution development and delivery into logical phases
- Provide alternative methodologies and approaches for deploying modifications
- Determine solution maintenance cadence and timelines
- Identify upgrade scenarios and select appropriate tools

Define an application lifecycle management (ALM) strategy

- Define a code management and data flow strategy
- Define a Microsoft Power Platform solution management strategy
- Determine which build automation capabilities to implement
- Define a roll-back strategy for solution code and data

Determine a data management strategy

- Differentiate between transactional, historical, and master data
- Define data quality and data validation process
- Define data cleansing and transformation strategies
- Define data dependencies
- Develop a data migration strategy for master, transactional, reference, parameter, and document data entities
- Develop data cut-over, verification and data retention plans

Define the security architecture

- Differentiate between Azure, finance and operations apps, and infrastructure security
- Describe Azure and infrastructure security-related elements

- Review security design and performance implications of record-level security in Dynamics 365
- Review security design and license implications of custom and standard role-based security in Dynamics 365
- Identify use cases for segregation of duties

Define the integration architecture

- Select an integration pattern including OData, Microsoft Power Platform, Batch Data API, custom services, external web services, office integrations, business events, Azure Synapse Link, and dual-write with Microsoft Dynamics 365 apps
- Identify required integration and interface details
- Design integrations
- Define an integration testing strategy
- Define error handling and troubleshooting strategy for integrations
- Define use cases for integration requirements with Microsoft Power Platform and finance and operations apps

Define the business intelligence and reporting architecture

- Define data sources required to meet business intelligence and reporting requirements
- Select appropriate business intelligence and reporting tools including Power BI, organizational workspaces, financial reports, SQL Server Reporting Services (SSRS), and the Electronic Reporting tool
- Define printing requirements including, Document Routing Agent (DRA), modern report design layout templates, check printing, and label printing

Manage implementations (10–15%)

Manage interactions with FastTrack

- Identify the requirements for FastTrack eligibility
- Identify FastTrack engagement types and personnel roles

- Describe typical types of FastTrack workshops and the inputs for each workshop across the phases
- Describe go-live checklist elements
- Utilize Dynamics 365 Implementation Portal

Determine support options

- Develop a support plan and strategy
- Define post-go-live support plans including response times and service-level agreements (SLAs)
- Describe use cases and capabilities for the Power Platform Admin Center Support tool

Determine licensing requirements

- Determine the types of licenses required
- Estimate the number of licenses required by using the License Sizing estimator
- Describe the process for estimating ongoing software licensing costs

Manage testing (15–20%)

Define a testing strategy

- Define a testing strategy that includes all required types of testing
- Define a regression testing strategy
- Identify opportunities for automated testing
- Review use cases and test coverage for business scenarios
- Determine when to use RSAT, SysTest, Postman, ATL, Azure DevOps Test Plans, Leapworks, and other tools

Define a performance testing strategy

- Define performance goals and requirements
- Identify performance monitoring and testing tools

- Define performance benchmarks and success criteria
- Design a performance and load testing strategy
- Troubleshoot performance issues

Skills measured as of June 30, 2026

Audience profile

As a candidate for this exam, you implement Dynamics 365 Business Central. Candidates configure the core application, create companies, migrate data and collaborate with implementation teams to ensure useability and effective business management. Candidates implement and configure Business Central modules, including:

- Financial management
- Sales
- Purchasing
- Inventory
- Fixed Assets

Candidates have applied experience meeting business requirements and may specialize in one or more Business Central feature areas. They configure role centers, including insights, cues, action tiles, reports and charts, and expand functionality by using extensions. Candidates configure and use Copilot capabilities in Business Central, including built-in agents.

They understand how to integrate Business Central with other technologies, including:

- Microsoft 365
- Microsoft Power Platform

- Microsoft Dynamics 365

Skills at a glance

- Set up Business Central (20–25%)
- Configure financials (30–35%)
- Configure sales and purchasing (10–15%)
- Perform Business Central operations (30–35%)

Set up Business Central (20–25%)

Create and configure a company

- Create a company by using Assisted Setup
- Create a configuration worksheet
- Create and use a configuration package
- Create journal opening balances
- Migrate data to and within Business Central

Manage security

- Create and assign user profiles
- Set up a new user
- Create permissions and permission sets
- Apply security filters
- Assign user permissions by using security groups and permission sets
- Configure and use security auditing in Business Central

Set up core functionality

- Set up reports and configure report layouts
- Set up and use job queues

- Set up number series
- Enable Copilot and agent capabilities

Set up dimensions

- Set up dimensions and dimension values
- Set up global dimensions and shortcut dimensions
- Set up default dimensions for master data
- Set up blocking combinations of dimensions and dimension values
- Set up default dimensions for account types
- Set up default dimension priorities

Manage approvals by using workflows

- Set up native workflows
- Set up a notification system
- Set up users for approval and workflow user groups

Configure financials (30–35%)

Set up financial management

- Configure general ledger setup
- Configure accounting periods
- Set up payment terms
- Set up deferrals
- Configure currencies including exchange rates
- Set up payment methods

Manage the chart of accounts

- Set up general ledger accounts

- Create account categories and subcategories
- Prepare financial reporting with financial data and account categories
- Set up general ledger allocations

Set up posting groups

- Create specific posting groups
- Create general posting groups
- Configure the general posting setup
- Configure inventory posting setup
- Allow multiple posting groups

Set up journals and bank accounts

- Set up bank accounts
- Create journal templates, including number series
- Create batches
- Create templates for recurring journals

Set up accounts payables

- Create vendor accounts, including payment terms, vendor bank accounts, and related records
- Configure Purchases & Payables Setup
- Set up payment journals
- Assess the relationship between vendors, vendor ledger entries, detailed vendor ledger entries, and general ledger entries

Set up accounts receivables

- Create customer accounts, including payment terms, payment methods, customer bank accounts, and related records

- Configure Sales & Receivables Setup
- Set up cash receipt journals
- Set up payment registration
- Assess the relationship between customers, customer ledger entries, detailed customer ledger entries, and general ledger entries

Configure fixed assets

- Configure fixed asset settings, including depreciation books and fixed asset classes and subclasses
- Create and modify fixed assets, main assets, and components
- Differentiate between different depreciation methods

Configure sales and purchasing (10–15%)

Set up inventory

- Configure inventory setup
- Configure core item settings, including item categories, item attributes, units of measure, and item variants
- Create locations
- Assess the relationship between items, item ledger entries, value entries, and general ledger entries
- Differentiate between costing methods
- Configure stockkeeping units

Configure master data for sales and purchasing

- Configure core customer settings including shipping agents, locations, and shipping addresses
- Configure core vendor settings including order address, lead time, and locations

Manage pricing and discounts

- Manage vendor purchase prices
- Manage purchase line and invoice discounts
- Manage customer sales prices
- Manage sales line and invoice discounts

Perform Business Central operations (30–35%)

Perform basic tasks in Business Central

- Differentiate between designing, customizing, and personalizing pages
- Customize pages
- Apply and save filters
- Find documents and related entries
- Inspect pages
- Perform data updates by using the Edit in Excel feature
- Configure and use data analysis mode
- Personalize pages

Process purchases

- Manage quotes
- Create a purchase order
- Receive items for a purchase order
- Receive more items than ordered
- Reverse a receipt
- Create a posted invoice from a purchase order
- Configure recurring purchase lines
- Manage blanket purchase orders

- Use deferrals with purchasing documents

Process sales

- Manage quotes
- Convert a sales quote into a sales order or sales invoice
- Analyze item availability
- Ship items for a sales order
- Reverse a shipment
- Create a sales invoice from a sales order
- Configure recurring sales lines
- Manage blanket sales orders
- Use deferrals with sales documents

Process financial documents

- Process purchase invoices
- Process purchase credit memos
- Process sales invoices
- Process sales credit memos
- Combine sales shipments into a single sales invoice
- Combine purchase receipts into a single purchase invoice
- Correct a posted purchase invoice
- Correct a posted sales invoice
- Release and reopen documents
- Process prepayment invoices for purchases and sales

Process journals and payments

- Process payments by using payment journals
- Process receipts by using the cash receipt journal
- Process payment registrations
- Apply ledger entries and undo applied entries
- Reverse posted journals
- Perform bank account reconciliation
- Process recurring transactions by using the recurring journals
- Use general ledger allocations
- Adjust currency exchange rates
- Correct posted dimensions using the Dimension Correction Tool
- Revalue general ledger account balances

Process fixed asset transactions

- Process fixed asset acquisitions
- Process fixed asset depreciations
- Process fixed asset disposals

Process inventory transactions

- Process inventory receipts
- Process inventory shipments
- Transfer items between locations
- Adjust item cost
- Count inventory
- Reclassify inventory

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Study guide for Exam MB-820: Microsoft Dynamics 365 Business Central Developer

Article • 05/10/2025

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.

About the exam

Languages

Some exams are localized into other languages. You can find these in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of June 10, 2025

Audience profile

As a Microsoft Dynamics 365 Business Central developer, you're responsible for designing, developing, testing, and maintaining solutions based on Dynamics 365 Business Central. In this role, you develop apps that extend Business Central, including customizing or adding extra functionality. You also integrate Business Central with other applications, such as Microsoft Power Platform products. Plus, you need to ensure that data remains current during an upgrade process.

As a Business Central developer, you're responsible for troubleshooting and debugging issues in the system. This may involve:

- Identifying the root cause of a problem.
- Fixing bugs.
- Testing the solution to ensure that it works as expected.

You may be required to optimize the performance of the system by:

- Identifying bottlenecks.
- Improving code quality.

You must have applied knowledge of Business Central and the application language (AL), the development environment, and other tools to develop extensions for it. You need some knowledge of how to install and upgrade the system. You should also understand:

- Industry terminology.
- The Business Central role in relationship to Microsoft 365 and Dynamics 365.

As a developer, you should have knowledge of:

- AppSource, Business Central–related technologies, frameworks, and services to build solutions.
- Technologies for application lifecycle management (ALM), including source control management (SCM) and continuous integration and continuous delivery (CI/CD).

Skills at a glance

- Describe Business Central (10–15%)
- Install, develop, and deploy for Business Central (10–15%)
- Develop by using AL objects (35–40%)
- Develop by using AL (15–20%)
- Work with development tools (10–15%)
- Integrate Business Central with other applications (10–15%)

Describe Business Central (10–15%)

Describe the Business Central architecture

- Describe the components and capabilities of Business Central
- Describe the core solution and extensions approach for Business Central
- Describe the update lifecycle for customizations of Business Central
- Differentiate Business Central online and Business Central on-premises features

Describe Business Central apps

- Differentiate between the base app and the system app
- Describe the functionality of apps
- Describe the process of bringing an app to AppSource

Install, develop, and deploy for Business Central (10–15%)

Install and configure a Business Central development environment

- Describe the development environment for Business Central
- Install and configure the development environment
- Manage configuration files for an AL extension
- Manage multiple AL extensions in one workspace

Create, debug, and deploy an extension in Business Central

- Debug an extension with Visual Studio Code
- Deploy an extension
- Create or modify a Business Central extension in Visual Studio Code
- Manage multilanguage development
- Maintain extensions

Develop by using AL objects (35–40%)

Build and extend tables and pages in Business Central

- Develop Role Center pages
- Identify different page types
- Build and extend page objects
- Build and extend tables
- Build and extend enums

Build and extend reports

- Substitute a report
- Create a report layout
- Create document reports
- Design the data model of a report
- Implement multilanguage in reports

- Use report triggers, functions, and processing-only reports
- Develop the report request page

Design and create an XMLport

- Configure different XMLport properties
- Configure nodes and their properties
- Use XMLports in AL code

Develop codeunits

- Create and access codeunits
- Use events and triggers
- Implement interfaces
- Create installation and upgrade codeunits

Create entitlement and permission set objects

- Create and extend permission sets
- Override entitlements with inherent permissions
- Troubleshoot permission sets

Create queries in Business Central

- Link and join data items
- Apply filters in query objects
- Use queries instead of record variables
- Aggregate data in query objects
- Use a query to create a report

Develop by using AL (15–20%)

Customize the UI experience, and implement onboarding techniques

- Create profiles in AL
- Use and create views in AL
- Develop the UI by using the user assistance model
- Integrate assisted setup
- Create teaching tips and in-app tours to onboard users
- Create an onboarding checklist

Describe the essential development standards

- Implement the data process model in Business Central
- Define the different functional table types and characteristics
- Use document standards in Business Central
- Implement master data standards and design patterns

Use AL to extend Business Central

- Create custom procedures
- Use data types in code
- Manage files
- Manipulate data by using code
- Describe the basics of the AL
- Use the different types of expressions
- Use AL built-in functions and AL statements
- Work with variables and define them in AL code
- Manage errors
- Use access modifiers to limit access

Work with development tools (10–15%)

Implement semiautomated test processes, and run standard Business Central tests

- Test applications in Business Central
- Install and run the Test Toolkit
- Develop test codeunits and procedures

Manage and analyze telemetry

- Monitor and analyze telemetry
- Configure telemetry
- Create custom telemetry signals

Integrate Business Central with other applications (10–15%)

Access Representational State Transfer (REST) services from within Business Central

- Use the different HTTP classes and their functions
- Get data from and send data to an external REST service
- Use and read JSON

Implement APIs

- Create and work with APIs
- Create and manage OData bound and unbound actions
- Use Read Scale-Out to improve performance

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't

available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 24, 2026

Audience profile

As a candidate for this exam, you have subject matter expertise managing devices and client applications in a Microsoft 365 tenant by using Microsoft Intune and agentic tools and workflows. You're responsible for:

- Implementing solutions for efficient deployment and management of endpoints on various platforms and device types
- Implementing and managing endpoints at scale by using Microsoft Intune, Microsoft Intune Suite, Windows Autopilot, Microsoft Defender for Endpoint, Microsoft Entra ID, PowerShell, Microsoft Graph, and Windows 365
- Implementing identity, security, access, policies, updates, and apps for endpoints
- Optimizing endpoint operations through automation, monitoring, and reporting

As an endpoint administrator, you collaborate with architects, Microsoft 365 administrators, security administrators, and other workload administrators to plan and implement a modern workplace strategy that meets the business needs of an organization.

You must have experience with Microsoft Entra ID and Microsoft 365 technologies, including Intune, as well as strong skills and experience in deploying, configuring, and maintaining Windows client and non-Windows devices. You should also have an understanding of Microsoft Security Copilot, Intune agents, and Microsoft Defender XDR.

Skills at a glance

- Prepare infrastructure for devices (20–25%)
- Manage and maintain devices (25–30%)
- Protect devices (15–20%)
- Manage and secure applications (15–20%)
- Optimize endpoint operations by using automation, monitoring, and reporting (10–15%)

Prepare infrastructure for devices (20–25%)

Add devices to Microsoft Entra ID

- Choose an appropriate device join type, including considerations such as device registration and Microsoft Entra join
- Join devices to Microsoft Entra ID
- Register devices to Microsoft Entra ID
- Plan and implement groups for devices in Microsoft Entra ID, including dynamic group membership rules

Enroll devices to Microsoft Intune

- Configure enrollment settings in Microsoft Intune
- Configure automatic enrollment for Windows
- Configure personal enrollment for macOS, iOS, iPadOS
- Configure enrollment profiles for Android devices, including fully managed, dedicated, corporate owned, work profile, enrollment restrictions and troubleshooting enrollment failures
- Configure corporate enrollment for macOS and iOS devices by integrating Intune with Apple Business Manager
- Configure enrollment for Android devices by integrating Intune with Samsung Knox Mobile Enrollment or Google Zero Touch

Implement identity and compliance

- Manage built-in and custom roles for Intune and Windows 365, including role assignments
- Configure scope tags and scoped administration for multi-admin environments
- Implement and manage multi-admin approval
- Implement compliance policies for all supported device platforms by using Intune
- Implement Microsoft Entra Conditional Access policies that require a compliance status
- Configure Windows Hello for Business by using Intune
- Implement and manage Windows Local Administrator Password Solution (Windows LAPS) by using Microsoft Intune and Microsoft Entra ID
- Manage the membership of local groups on Windows devices by using Intune

Manage and maintain devices (25–30%)

Deploy and upgrade Windows clients by using cloud-based tools

- Choose between Windows Autopilot deployment profiles and device preparation policies
- Choose between Windows Autopilot deployment modes, including user-driven, pre-provisioning, and self-deploying
- Apply a device name template by using Windows Autopilot
- Implement Windows client deployment by using Windows Autopilot
- Create an Enrollment Status Page (ESP)
- Plan and implement device upgrades for Windows 11 by using Intune
- Provision and configure Windows 365 Cloud PCs by using Intune, including provisioning policies, network connections, and image management
- Implement Windows Backup and Restore by using Intune

Plan and implement device configuration profiles

- Create device configuration profiles for Windows devices, including importing ADMX files and using Group Policy analytics

- Create device configuration profiles for Android devices
- Create device configuration profiles for iOS/iPadOS devices
- Create device configuration profiles for macOS devices
- Create device configuration profiles for specialty devices, including Teams Rooms, HoloLens 2, and Zebra
- Target a profile by using assignment filters and enrollment time grouping

Implement Intune Suite add-on capabilities

- Configure Endpoint Privilege Management including configuring elevation policies, monitoring elevated actions, and adjusting EPM settings
- Manage applications by using the Enterprise App Catalog
- Configure Microsoft Intune Remote Help
- Plan and implement Microsoft Cloud PKI, including setting up cloud-based PKI, automating certificate issuance, and monitoring certificate health
- Implement Microsoft Tunnel for Mobile Application Management, including configuring Tunnel Gateway, extending support to MAM devices, and monitoring tunnel connections
- Implement Microsoft Intune Advanced Analytics, including anomaly detection, proactive insights, and risk-based policy recommendations

Perform remote actions on devices

- Sync, restart, retire, or wipe devices
- Perform bulk remote actions
- Update Microsoft Defender Antivirus security intelligence
- Rotate BitLocker recovery keys
- Rotate locate administrator passwords
- Run a device query by using KQL
- Collect device diagnostics and logs by using Microsoft Intune, including using the Troubleshooting blade for user-based diagnostics

Protect devices (15–20%)

Configure endpoint security

- Create antivirus policies by using Microsoft Intune
- Create and manage disk encryption policies by using Microsoft Intune, including managing BitLocker recovery keys, configuring user self-service recovery, and monitoring encryption compliance status
- Create firewall policies by using Microsoft Intune
- Configure Attack surface reduction policies by using Microsoft Intune, including applying Zero Trust principles for endpoint protection
- Plan and implement security baselines by using Microsoft Intune
- Integrate Intune with Microsoft Defender for Endpoint, including configuring Endpoint Detection and Response (EDR) policies, investigating endpoint threats, and triaging incidents
- Onboard devices into Microsoft Defender for Endpoint
- Configure App Control for Business policies by using Microsoft Intune

Manage device updates

- Plan for device updates by using Intune
- Create and manage update rings, feature updates, and quality updates for Windows devices by using Intune
- Implement Windows Autopatch and configure Hotpatch policies
- Create and manage update policies for iOS/iPadOS and macOS devices by using the Settings Catalog in Microsoft Intune
- Manage Android updates by using configuration profiles or firmware-over-the-air (FOTA) deployments
- Configure Windows client Delivery Optimization by using Intune
- Monitor device updates by using Intune

Manage and secure applications (15–20%)

Deploy and update apps

- Prepare applications for deployment by using Intune
- Deploy apps by using Intune, including Win32 apps, line-of-business (LOB) apps, and Microsoft Store apps
- Configure Quiet Time policies for Android and iOS apps
- Deploy Microsoft 365 Apps by using Intune
- Configure policies for Office apps by using Microsoft Intune or the Microsoft 365 Apps admin center
- Deploy Microsoft 365 Apps as part of a Windows Autopilot deployment, including using the Office Deployment Tool (ODT) or Microsoft Intune
- Manage Microsoft 365 Apps by using the Microsoft 365 Apps admin center
- Deploy apps from platform-specific app stores by using Intune, including Apple Volume Purchase Program and Google Play
- Monitor app deployment status and troubleshoot installation failures by using Microsoft Intune

Plan and implement app protection and app configuration policies

- Plan and implement app protection policies for managed and unmanaged (BYOD) devices by using Microsoft Intune
- Implement Microsoft Entra Conditional Access policies for app protection policies
- Plan and implement app configuration policies for managed apps and managed devices

Optimize endpoint operations by using automation, monitoring, and reporting (10–15%)

Automate management tasks

- Automate Intune management tasks by using PowerShell and Microsoft Graph
- Investigate threats identified by Security Copilot agents in Intune

- Analyze device performance by using Security Copilot agents in Intune
- Review and respond to Security Copilot agent recommendations to make management decisions
- Extend device compliance by using PowerShell

Monitor and optimize health

- Implement reporting and data visibility in Microsoft Intune, including customizing reports and filters, using workbooks and dashboards, and exporting reporting data
- Monitor endpoint performance by using Endpoint Analytics, including proactive remediations, device health scores, and app startup performance
- Configure and manage proactive remediation scripts, including detecting and fixing common device issues, and scheduling remediation runs
- Analyze endpoint reliability and user experience scores, including startup performance, restart frequency, and application reliability metrics
- Monitor tenant health and Intune service communications, including reviewing service health dashboards, message center notifications, and establishing operational baselines
- Configure alerts and notifications for policy and compliance changes, including setting up alert rules for compliance drift, enrollment failures, and configuration conflicts

Skills measured as of April 28, 2026

Audience profile

If you’re an administrator who deploys and manages Microsoft 365 and performs Microsoft 365 tenant-level implementation and administration of cloud and hybrid environments, this exam is designed for you.

As a Microsoft 365 administrator, you:

- Function as the integrating hub for all Microsoft 365 workloads.
- Coordinate across multiple Microsoft 365 workloads.
- Work with architects and other administrators responsible for workloads, infrastructure, identity, security, compliance, endpoints, and applications.

As a candidate for this exam, you have functional experience with all Microsoft 365 workloads and Microsoft Entra ID and have administered at least one of these. You should also have a working knowledge of the following:

- Networking
- Active Directory Domain Services
- DNS
- PowerShell

To become a Microsoft 365 Certified: Administrator Expert, you must earn at least one of the following: Microsoft 365 Certified: Endpoint Administrator Associate, Microsoft 365 Certified: Teams Administrator Associate, Microsoft Certified: Identity and Access Administrator Associate certification.

Skills at a glance

- Deploy and manage a Microsoft 365 tenant (25–30%)
- Implement and manage Microsoft Entra identity and access (25–30%)
- Manage security and threats by using Microsoft Defender XDR (30–35%)
- Manage compliance by using Microsoft Purview (10–15%)

Deploy and manage a Microsoft 365 tenant (25–30%)

Implement and manage a Microsoft 365 tenant

- Create a tenant
- Implement and manage domains
- Configure org settings, including Security & privacy and Organization profile
- Monitor the health of Microsoft 365 services by using Service Health, including configuration of notifications
- Configure and review Network connectivity insights
- Configure and monitor software updates by using the Microsoft 365 admin center
- Monitor Microsoft 365 adoption and usage
- Configure and manage Microsoft 365 Backup

Manage users and groups

- Create and manage users in Microsoft Entra ID, including external users
- Create and manage contacts in the Microsoft 365 admin center
- Create and manage groups, including Microsoft 365 Groups and manage shared mailboxes

- Manage and monitor Microsoft 365 licenses, including group-based licensing
- Perform bulk user management, including Microsoft Graph PowerShell and Microsoft Entra PowerShell

Manage roles and role groups

- Implement and manage roles in Microsoft 365 and Microsoft Entra ID
- Manage permissions for Microsoft Defender XDR, Microsoft Purview and other Microsoft 365 workloads using roles or role groups
- Manage delegation by using administrative units
- Manage Microsoft Entra ID roles in Microsoft Entra Privileged Identity Management (PIM)

Implement and manage Microsoft Entra identity and access (25–30%)

Implement and manage identity synchronization with Microsoft Entra tenant

- Prepare for identity synchronization, including IdFix
- Implement and manage directory synchronization by using Microsoft Entra Connect Sync or Microsoft Entra Cloud Sync
- Monitor synchronization by using Microsoft Entra Connect Health
- Troubleshoot synchronization, including Microsoft Entra Connect Sync and Microsoft Entra Cloud Sync

Implement and manage authentication

- Implement and manage authentication methods
- Implement and manage self-service password reset (SSPR)
- Implement and manage Microsoft Entra Password Protection
- Investigate and resolve authentication issues

Implement and manage secure access

- Plan for identity protection
- Implement and manage Microsoft Entra Identity Protection
- Plan Conditional Access policies
- Implement and manage Conditional Access policies
- Implement and manage multifactor authentication (MFA) by using Conditional Access policies

Manage security and threats by using Microsoft Defender XDR (30–35%)

Review and respond to security reports and alerts generated by Microsoft Defender XDR

- Review and respond to threats by using Microsoft Security Exposure Management, including the Microsoft Secure Score
- Review and respond to incidents and alerts generated by Microsoft Defender XDR, including advanced hunting
- Review and respond to issues identified in Microsoft Defender XDR reports
- Review and respond to threats identified by Microsoft Defender Threat Intelligence

Implement and manage email and collaboration protection by using Microsoft Defender for Office 365

- Implement threat policies and rules in Microsoft Defender for Office 365
- Configure alert policies in Microsoft Defender for Office 365
- Investigate and respond to email and collaboration threats by using Microsoft Defender for Office 365
- Manage attack simulations, including training campaigns
- Manage restricted entities, including blocked users

Implement and manage endpoint protection by using Microsoft Defender for Endpoint

- Onboard devices to Microsoft Defender for Endpoint
- Configure endpoint settings
- Review and respond to vulnerabilities identified in the Microsoft Defender Vulnerability Management dashboard

Implement and manage Microsoft Defender for Cloud Apps

- Configure the app connector for Microsoft 365
- Configure Microsoft Defender for Cloud Apps policies, including triggering alerts
- Interpret activity log
- Configure Cloud App Discovery
- Review and respond to issues identified in Cloud App Discovery

Manage compliance by using Microsoft Purview (10–15%)

Implement Microsoft Purview information protection and data lifecycle management

- Implement and manage sensitive information types by using keywords, keyword lists, or regular expressions
- Implement retention labels, retention label policies, and retention policies
- Implement sensitivity labels and sensitivity label policies
- Monitor label usage by using Content explorer, Activity explorer, and label reports

Implement Microsoft Purview data loss prevention (DLP)

- Configure DLP policies for Microsoft 365 workloads, including Exchange Online, SharePoint Online, OneDrive, Teams, Power BI, and Microsoft 365 Copilot
- Configure Endpoint DLP
- Review and respond to DLP alerts, events, and reports

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Study guide for Exam MS-700: Managing Microsoft Teams

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a **free** online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 29, 2026

Audience profile

As a Microsoft Teams administrator, you plan, implement, manage, and maintain internal and external collaboration and communication solutions using Teams.

You're responsible for configuring and managing teams, channels, chat, apps, events, and calling.

You collaborate with owners of other areas, including:

- Identity
- Licensing
- Information management
- User adoption
- Security
- Compliance
- Devices
- Networking

As a candidate for this exam, you should have a working knowledge of how Teams integrates into Microsoft 365 services.

Skills at a glance

- Configure and manage a Teams environment (40–45%)
- Manage teams, channels, chats, and apps (20–25%)

- Manage meetings and calling (15–20%)
- Monitor, report on, and troubleshoot Teams (15–20%)

Configure and manage a Teams environment (40–45%)

Plan network settings for Teams

- Calculate network bandwidth capacity for Teams voice, video, meetings, and events
- Analyze network impact by using Network planner
- Specify network ports and protocols used by Teams
- Assess network readiness and connectivity by using the Microsoft Teams Network Assessment Tool and Microsoft 365 network connectivity test tool

Manage security and compliance settings for Teams

- Identify licensing requirements for security and compliance features
- Specify security and compliance alert policies for Teams
- Choose appropriate Teams administrator roles
- Plan and configure threat policies in Microsoft Defender for Office 365
- Specify retention policies
- Specify sensitivity labels and publishing policies, including for Teams meetings
- Specify Microsoft Purview Data Loss Prevention (DLP) policies
- Specify Microsoft Entra Conditional Access policies for Teams
- Specify Microsoft Purview Information Barriers policies
- Identify appropriate use cases for Microsoft Purview Communication Compliance and Microsoft Purview Insider Risk Management

Plan and implement governance for Teams

- Identify licensing requirements for lifecycle management of teams
- Identify where Teams stores content

- Plan and manage update policies
- Create and manage policy packages in Teams
- Plan and configure policy assignment for users and groups
- Configure settings for Microsoft 365 group creation
- Configure an expiration policy for Microsoft 365 groups
- Configure a naming policy for Microsoft 365 groups, including blocked words
- Archive, delete, or unarchive one or more teams
- Restore or troubleshoot the deletion of a Microsoft 365 group
- Identify when to use Microsoft Entra Access reviews for teams and groups
- Perform operations for Teams by using PowerShell and Microsoft Graph

Configure and manage external collaboration

- Identify licensing requirements for external collaboration
- Configure SharePoint Online and OneDrive external sharing settings
- Configure External access in the Microsoft Teams admin center
- Control External Access by Domain for Specific Users and Groups
- Configure External collaboration settings in Microsoft Entra ID for guest access
- Configure guest access and sharing in the Microsoft Teams admin center, Microsoft 365 admin center, Microsoft Entra admin center, or the SharePoint admin center
- Control guest access to a specific team by using Microsoft Purview and Microsoft Entra ID
- Remove guests from Teams, including from a team or a tenant
- Configure shared channels for external access
- Configure and manage B2B direct connect cross-tenant access settings in Microsoft Entra ID for shared channels
- Configure a multitenant organization (MTO)

Manage Teams clients and devices

- Identify licensing requirements for Teams Phone accounts and resource accounts
- Identify licensing requirements for Teams devices
- Manage configuration profiles for Teams devices
- Configure accounts and systems for Microsoft Teams Rooms
- Manage device settings and firmware
- Manage Teams device tags
- Provision and configure remote sign-in for new devices
- Plan and configure Teams for VDI

Manage teams, channels, chats, and apps (20–25%)

Create and manage teams

- Plan for a Teams rollout by using Advisor for Teams
- Create a team by using the Microsoft Teams admin center, Teams client, the Teams PowerShell module, or Microsoft Graph
- Create a team from an existing Microsoft 365 group, SharePoint site, or team
- Create a team from a template
- Create and manage templates and template policies for teams
- Manage the membership and roles for a team
- Manage a team in the Microsoft Teams admin center
- Manage Teams environment settings
- Configure privacy and sensitivity settings for a team
- Create and manage frontline teams and experiences

Manage channels and chats

- Recommend channel types, including standard, private, and shared

- Add, edit, and remove channels
- Manage channel settings
- Create and manage Teams policies for channel creation and sharing
- Manage private and shared channel membership
- Create and manage messaging policies

Manage apps for Teams

- Manage Org-wide app settings in the Microsoft Teams admin center
- Create and manage app assignments and app setup policies
- Manage permissions and consent for apps, including blocking apps
- Recommend appropriate extensibility options, including apps, tabs, meetings, messaging extensions, and workflows
- Manage purchasing of apps in the Teams app store
- Customize the appearance of the Teams app store
- Upload an app to Teams

Manage meetings and calling (15–20%)

Manage meetings and events

- Recommend meeting types based on business requirements, including Appointments with Microsoft Teams, webinars, Teams town halls, and meetings
- Configure meeting settings, including for Microsoft 365 Copilot
- Create and manage meeting templates and template policies
- Create and manage meeting policies
- Create and manage meeting customization policies
- Create and manage event settings and policies
- Configure and manage Teams webinars

- Configure and manage Teams town halls

Manage phone numbers and services for Teams Phone

- Provision and manage phone numbers for users, services, and conferencing bridges
- Assign, change, or remove a phone number for a user or a resource account
- Manage voice settings and policies for users
- Create and manage voicemail policies
- Manage auto-attendants and call queues
- Create and manage calling policies

Monitor, report on, and troubleshoot Teams (15–20%)

Monitor and report on Teams

- Monitor and report on voice and meeting quality
- Configure alert rules
- Report on Teams usage, including team activity, app usage, active users, per-meeting metrics, and storage usage
- Monitor and report on the creation and deletion of teams
- Monitor and report on guest access
- Monitor the Microsoft 365 network connectivity test tool
- Manage feedback, including policies

Troubleshoot audio, video, and client issues

- Collect client-side logs
- Clear the Teams client cache
- Troubleshoot issues by using self-help diagnostics for Teams
- Troubleshoot Teams client installation and update issues

- Troubleshoot Teams client health and issues in the Microsoft Teams admin center
- Troubleshoot sign-in issues to Teams
- Troubleshoot Microsoft 365 Copilot and AI experiences in Teams
- Troubleshoot issues with joining meetings and accessing features in meetings

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English

version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of April 28, 2026

Audience profile

As a candidate for this exam, you're responsible for planning, deploying, configuring, maintaining, and troubleshooting collaboration communication systems that include:

- Microsoft Teams Phone
- Microsoft Teams meetings, webinars, and town halls
- Microsoft Teams Premium
- Microsoft 365 Copilot
- Microsoft Teams Rooms
- Other certified and supported devices
- Flexible workplaces

As a collaboration communications systems engineer, you have a fundamental understanding of networking, telecommunications, audio/visual and meeting room technologies, and identity and access management. You're proficient in managing collaboration and communications solutions by using:

- Microsoft Teams admin center

- Microsoft Teams Rooms Pro Management portal
- PowerShell
- Microsoft Call Quality Dashboard

You work with:

- Microsoft Teams administrators
- Microsoft identity and access administrators
- Microsoft 365 administrators
- Owners of other workloads, including facilities managers, network engineers, security engineers, device manufacturers, telephony providers, and Microsoft Certified solution providers

Skills at a glance

- Plan and design collaboration communications systems (20–25%)
- Configure and manage Teams meetings, webinars, and town halls (15–20%)
- Configure and manage Teams Phone (30–35%)
- Configure and manage Teams Rooms and devices (20–25%)

Plan and design collaboration communications systems (20–25%)

Plan and design Teams meetings

- Plan for Teams meetings, webinars, and town halls
- Plan and design Teams meeting policies and settings
- Plan for PSTN audio conferencing
- Recommend when to use Teams Premium, including Microsoft 365 Copilot
- Recommend meeting types based on business requirements, including virtual appointments, webinars, town halls, and meetings
- Recommend methods for assigning policies

- Plan and design Teams policy packages

Plan and design Teams Phone and PSTN connectivity

- Identify licensing requirements to enable Teams Phone for users, shared devices, and Teams resource accounts
- Identify PSTN connectivity requirements
- Recommend when to use Teams Phone Mobile
- Plan for Operator Connect
- Plan and design SMS in Teams with Microsoft Calling Plan numbers
- Recommend an appropriate billing method for communications consumption, including domestic, international, and pay-as-you-go (PAYG)
- Plan for Shared Calling
- Plan usage scenarios for service and user phone numbers
- Plan for porting and/or acquiring phone numbers
- Design call flows for auto attendants and call queues
- Design a solution for dynamic emergency calling
- Recommend devices for Teams Phone
- Plan for and recommend analog devices, Session Initiation Protocol (SIP) handsets, and SIP devices
- Recommend when to use Survivable Branch Appliances (SBAs)
- Plan and design Direct Routing
- Recommend a Session Border Controller (SBC) solution based on PSTN connectivity
- Identify an appropriate compliance recording solution
- Identify use cases for certified contact center solutions
- Identify use cases for the Queues app

Plan and design Teams-certified device solutions

- Recommend a room configuration based on the meeting space, including Bring Your Own Device (BYOD)
- Recommend a room configuration based on customer and business requirements
- Choose between Teams Rooms Basic and Teams Rooms Pro
- Recommend a Teams Rooms device platform, including Windows and Android
- Recommend Teams-certified devices
- Recommend Teams Rooms certified components
- Recommend an interoperability solution for Microsoft Teams Rooms, including Cloud Video Interop (CVI), Direct Guest Join, and SIP Guest Join
- Identify the requirements for a Microsoft Teams Rooms resource account
- Identify the enrollment requirements for Microsoft Intune
- Identify the enrollment requirements for Android Open Source Project (AOSP) device management
- Plan for advanced features on shared devices

Prepare the network for Teams

- Evaluate network readiness by using the Microsoft Teams Network Assessment Tool
- Recommend when to use Enterprise Content Delivery Network (eCDN)
- Specify the network configuration for certified devices
- Determine network requirements by using the Network planner for Teams
- Specify the optimal network architecture for Teams
- Specify Teams Quality of Service (QoS) requirements and policies
- Configure Teams for QoS
- Configure Media Bit Rate (MBR)
- Create and assign a network roaming policy
- Configure the network topology
- Configure tenant data upload for the Microsoft Call Quality Dashboard

- Configure reporting labels for Call Analytics

Configure and manage Teams meetings, webinars, and town halls (15–20%)

Configure and manage Teams meetings

- Create and manage meeting policies
- Configure meeting settings
- Configure avatars for Teams meetings
- Configure and manage meeting features, including meeting apps, polls and forms, Q&A, breakout rooms, and Teams Premium features
- Create and manage Teams meeting templates and meeting template policies
- Configure controlled-content meeting policies
- Configure Cloud Video Interop policies
- Configure meeting recording and transcription to support Microsoft 365 Copilot and Microsoft Teams Premium
- Configure virtual appointments and advanced virtual appointment policies
- Evaluate Teams Premium by using the Teams admin center

Configure and manage Audio Conferencing

- Configure Audio Conferencing for Teams
- Configure a default Audio Conferencing bridge
- Configure an Audio Conferencing bridge number
- Configure a toll-free Audio Conferencing bridge number
- Assign a specific Audio Conferencing number to a user
- Configure toll-free Audio Conferencing
- Configure the Audio Conferencing numbers included in meeting invitations

Configure and manage Teams webinars

- Configure webinar roles and presenter and attendee experience
- Manage access to scheduling Teams webinars
- Configure policies for Teams webinars
- Configure in-org vs public webinars
- Configure advanced webinar features
- Configure attendee interaction for webinars

Configure and manage Teams Town halls

- Configure Town Hall settings
- Configure a Microsoft eCDN for Town halls
- Configure advanced Town hall features
- Configure Town halls with Teams, Viva Engage, and Microsoft Stream

Implement and configure Teams Phone (30–35%)

Create and configure Teams Phone policies

- Create and configure dial plans
- Create and configure calling policies
- Create and configure call park policies
- Create and configure caller ID policies
- Create and configure IP Phone policies
- Create and configure mobility policies
- Create and configure voicemail policies
- Create and configure call hold policies
- Create and configure outbound call restrictions
- Create and configure inbound call blocking

- Create and configure routing of unassigned numbers
- Create and configure compliance recording policies
- Create and configure Shared Calling policies

Create and configure auto attendants and call queues

- Create and configure resource accounts
- Assign licenses to resource accounts
- Assign phone numbers to resource accounts, including toll-free phone numbers
- Assign a resource account to an auto attendant or call queue
- Choose an appropriate call queue routing method, including call priorities
- Configure business hours and holidays for auto attendants
- Configure custom Music on Hold (MoH)
- Configure caller ID policies and outbound caller ID for call queues
- Create and configure voice applications policies for auto attendants and call queues
- Implement callback for call queues
- Configure the Queues app

Configure emergency calling

- Create and configure emergency calling locations
- Configure emergency call routing policies
- Configure emergency calling policies
- Configure networks and locations (Location Information Service (LIS))
- Validate emergency address and emergency calling from Teams clients
- Assign a verified emergency address location
- Troubleshoot dynamic emergency address

Assign Teams Phone licenses, phone numbers, and policies

- Assign a Teams Phone Standard license
- Assign a Teams Calling Plan
- Assign phone numbers to users by using the Microsoft Teams admin center
- Assign phone numbers in bulk by using PowerShell
- Assign Teams Phone policies to a specific user
- Create and assign policy packages
- Configure and assign Teams Phone policies by using group policy

Configure and manage calling features for Teams Phone

- Configure Cloud Voicemail
- Configure group call pickup
- Configure Call Forwarding
- Configure Simultaneous Ring
- Configure call delegation
- Configure Audio Conferencing
- Configure private lines

Configure and manage Direct Routing for Teams Phone

- Configure connectivity for Teams Phone to an SBC
- Create and configure a PSTN gateway
- Create PSTN usage records
- Create and configure voice routes
- Create and configure voice routing policies
- Validate Direct Routing SBC connectivity
- Identify use cases for Location-Based Routing (LBR)
- Identify use cases for Local Media Optimization (LMO)

- Configure trunk translation rules
- Configure on-network conferencing for Direct Routing
- Configure SBA policies
- Manage emergency call routing policies for Direct Routing
- Configure phone number inventory for Direct Routing
- Troubleshoot Direct Routing by using the Teams admin center

Configure and manage Teams Rooms and devices (20–25%)

Manage and maintain Teams Rooms and devices

- Configure device settings
- Configure local network settings
- Configure device updates
- Recommend Microsoft Entra Conditional Access MFA exceptions for resource accounts
- Configure meeting room settings by using the Microsoft Teams admin center or the local Teams application settings
- Manage Teams Rooms from the Microsoft Teams Rooms Pro Management portal
- Specify Intune configuration requirements for Teams devices
- Deploy common area phones, user phones, and conference phones
- Create and manage Teams device tags
- Configure SIP Gateway and provision SIP devices
- Monitor Teams device health
- Troubleshoot authentication issues
- Troubleshoot update issues
- Troubleshoot remote provisioning issues
- Troubleshoot proximity join issues

Configure and manage Teams Android devices

- Configure Teams IP phone policies
- Create and configure device configuration profiles for Android based devices
- Enable hotline for shared space devices
- Deploy Android devices remotely
- Configure custom displays for Teams Rooms on Android and Teams panels
- Specify Intune configuration requirements for AOSP and Microsoft Device Ecosystem Platform (MDEP) devices

Configure and manage Teams Rooms on Windows

- Specify domain group policy exclusions for Teams Rooms on Windows
- Configure custom displays for Teams Rooms on Windows
- Customize Teams Rooms on Windows settings by using an XML configuration file
- Configure settings for peripherals for Teams Rooms on Windows

Configure optional features for Teams Rooms and devices

- Configure HDMI ingest and options
- Configure a content camera
- Configure Teams casting
- Configure proximity join
- Configure room remote
- Configure Direct Guest Join
- Configure hot desking on Teams shared devices
- Configure AI-enabled voice and video capabilities for shared space devices

Configure BYOD spaces and bookable desks

- Create and publish room types

- Manage inventory, including discovery of or import of hardware
- Assign devices to room types
- Set up and configure bookable desks
- Manage and monitor shared space rooms that include bring-your-own devices

Study guide for Exam MS-900: Microsoft 365 Fundamentals

Article • 03/31/2025

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when localized versions of an exam are not

updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of April 30, 2025

Audience profile

This exam is designed for you, if you're looking to demonstrate foundational-level knowledge of cloud-based solutions to facilitate productivity and collaboration among on-site, remote, and hybrid workers. As a candidate, you may:

- Have knowledge of cloud-based solutions.
- Be new to Microsoft 365.

You can use this exam to prepare for other Microsoft certifications, but it's not a prerequisite for the related ones.

As a candidate, you should be able to recommend Microsoft 365 solutions that address common organizational IT challenges. You should understand how Microsoft 365 solutions:

- Improve productivity
- Facilitate collaboration
- Optimize communications
- Help secure data
- Identify and facilitate compliance

You should be able to recommend solutions for:

- Endpoint and application management
- Desktop virtualization
- Automated operating system deployment
- Reporting and analytics

You should be familiar with Microsoft 365 licensing, deployment and migration assistance, and support options for organizations looking to maximize their investment in the cloud.

Skills at a glance

- Describe cloud concepts (5–10%)
- Describe Microsoft 365 apps and services (45–50%)
- Describe security, compliance, privacy, and trust in Microsoft 365 (25–30%)
- Describe Microsoft 365 pricing, licensing, and support (10–15%)

Describe cloud concepts (5–10%)

Describe the different types of cloud services available

- Describe Microsoft software as a service (SaaS), infrastructure as a service (IaaS), and platform as a service (PaaS) concepts and use cases
- Describe differences between Office 365 and Microsoft 365

Describe the benefits of and considerations for using cloud, hybrid, or on-premises services

- Describe public, private, and hybrid cloud models
- Compare costs and advantages of cloud, hybrid, and on-premises services
- Describe the concept of hybrid work and flexible work

Describe Microsoft 365 apps and services (45–50%)

Describe productivity solutions of Microsoft 365

- Describe the productivity and content creation capabilities of the core Microsoft 365 Apps including Microsoft Word, Excel, PowerPoint, and OneNote
- Describe the productivity benefits and capabilities of Microsoft 365 Copilot and Microsoft 365 Copilot Chat
- Describe project management capabilities of Microsoft 365 including Microsoft Project, Planner, Bookings, Forms, Lists, To Do, and Loop

Describe collaboration solutions of Microsoft 365

- Describe the collaboration and content sharing capabilities of Microsoft SharePoint, OneDrive, and Stream
- Describe the email and calendaring capabilities of Microsoft Exchange and Outlook
- Describe the collaboration and communication capabilities of Microsoft Teams and Teams Phone
- Describe the collaboration benefits and capabilities of Microsoft 365 Copilot and Microsoft 365 Copilot Chat
- Describe the employee experience capabilities of the Microsoft Viva apps
- Describe the ways that you can extend Microsoft Teams by using collaborative apps such as Whiteboard, Microsoft Planner, Microsoft Power Apps, and Power Automate

Describe device and cloud endpoint management concepts and deployment options in Microsoft 365

- Describe the endpoint management capabilities of Microsoft 365 including Microsoft Intune, co-management with Configuration Manager, Endpoint Analytics, Windows Autopilot, and Windows Autopatch
- Compare the differences between Windows 365 and Azure Virtual Desktop
- Describe the deployment and release models for Windows-as-a-Service (WaaS) including deployment rings
- Identify deployment and update channels for Microsoft 365 Apps

Describe Microsoft 365 administration capabilities

- Describe the capabilities of the Microsoft 365 Admin center and the reports available
- Describe the capabilities of the Microsoft 365 user portal
- Describe the reports available in other admin centers such as SharePoint, Teams, and Exchange
- Describe the capabilities of the Microsoft Copilot dashboard

Describe security, compliance, privacy, and trust in Microsoft 365 (25–30%)

Describe identity and access management solutions of Microsoft 365

- Describe the identity and access management capabilities of Microsoft Entra ID
- Describe cloud identity, on-premises identity, and hybrid identity concepts
- Describe how Microsoft uses methods such as multi-factor authentication (MFA), self-service password reset (SSPR), and conditional access, to keep identities, access, and data secure

Describe threat protection solutions of Microsoft 365

- Describe Microsoft Defender XDR, Defender for Endpoint, Defender for Office 365, Defender for Identity, Defender for Cloud Apps, and the Microsoft Defender Portal
- Describe Microsoft Secure Score benefits and capabilities
- Describe how Microsoft 365 addresses the most common types of threats against endpoints, applications, and identities

Describe trust, privacy, risk, and compliance solutions of Microsoft 365

- Describe the Zero Trust Model
- Describe Microsoft Purview compliance solutions such as insider risk, auditing, and eDiscovery

- Describe Microsoft Purview Information Protection features such as sensitivity labels and data loss prevention
- Describe how Microsoft supports data residency to ensure regulatory compliance
- Describe the capabilities and benefits of Microsoft Priva

Describe Microsoft 365 pricing, licensing, and support (10–15%)

Identify Microsoft 365 pricing and billing management options

- Describe the pricing model for Microsoft cloud services including enterprise agreements, cloud solution providers, and direct billing
- Describe available billing and bill management options including billing frequency and methods of payment

Identify licensing options available in Microsoft 365

- Describe license management
- Describe the differences between base licensing and add-on licensing

Identify support options for Microsoft 365 services

- Describe how to create a support request for Microsoft 365 services
- Describe support options for Microsoft 365 services
- Describe service-level agreements (SLAs) including service credits
- Determine service health status by using the Microsoft 365 admin center or the Microsoft Entra admin center

Study guide for Exam PL-200: Microsoft Power Platform Functional Consultant

Article • 11/26/2024

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
How to earn the certification	Some certifications only require passing one exam, while others require passing multiple exams.
Certification renewal	Microsoft associate, expert, and specialty certifications expire annually. You can renew by passing a free online assessment on Microsoft Learn.
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after

the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of December 26, 2024

Audience profile

As a candidate for this exam, you:

- Perform discovery.
- Capture requirements.
- Engage subject matter experts and stakeholders.
- Configure business solutions by using Microsoft Power Platform tools and components.

You create:

- Application enhancements
- Tailored user experiences
- Process automation

As a candidate, you implement the design provided by and in collaboration with a solution architect and the standards, branding, and artifacts established by user experience designers. You implement integrations with third-party applications and

services. You generate training documentation, and you facilitate training and enablement.

You must interact and effectively communicate with members of a delivery team, stakeholders, and customer teams while championing for their success. You must have an understanding of application lifecycle management (ALM) practices for Microsoft Power Platform and quality assurance.

You should be familiar with using the following Microsoft Power Platform components:

- Microsoft Dataverse
- Microsoft Power Apps
- Microsoft Power Automate cloud flows
- Microsoft Power Pages
- Microsoft Power Platform environments

You should have proficiency in:

- Data modeling
- User experience design
- Requirements analysis

Skills at a glance

- Configure Microsoft Dataverse (25–30%)
- Create apps by using Microsoft Power Apps (25–30%)
- Create and manage logic and process automation (25–30%)
- Manage environments (15–20%)

Configure Microsoft Dataverse (25–30%)

Manage the data model

- Create or modify standard, activity, or virtual tables
- Create new tables or modify existing tables

- Determine which type of relationship to implement, including one-to-many and many-to-many
- Configure table relationships including behaviors and cascading rules
- Create new or modify existing columns, including rollup and formula
- Configure table properties

Manage Dataverse

- Configure Dataverse search, and manage the search index
- Manage auditing
- Describe options for importing and exporting data
- Configure duplicate detection settings
- Configure bulk deletion

Configure security settings

- Manage business units
- Create and manage security roles
- Create and manage users and teams
- Create and manage column security
- Configure hierarchy security
- Configure Microsoft Entra ID group teams

Create apps by using Microsoft Power Apps (25–30%)

Create model-driven apps

- Create and configure multiple form types
- Use controls in the form designer
- Create and configure views
- Configure custom pages

- Configure modern commanding by using Power Fx
- Embed a canvas app in a model-driven app form
- Add Microsoft Power BI dashboards and reports in a model-driven app

Describe canvas apps

- Describe canvas app structure
- Describe form navigation, formulas, variables and collections, and error handling
- Describe how Microsoft Power Automate flows are called from a canvas app

Build Microsoft Power Pages

- Configure pages, forms, lists, and navigation
- Describe advanced Power Pages features, including document management, search, multi-step forms, and Power BI
- Configure website security including web roles and page access
- Describe use cases for templates
- Describe authentication options

Create and manage logic and process automation (25–30%)

Create and manage cloud flows

- Describe types of flows, use cases, and flow components, including when to use a classic workflow
- Describe components of a connector
- Implement logic controls including branches, loops, conditions, error handling, and variables
- Implement dynamic content and expressions
- Work with the Dataverse connector
- Manage and troubleshoot flows

Create and manage business process flows

- Configure a business process flow
- Add stages, workflows, and flow steps to a business process flow
- Manage the business process flow table for a business process flow

Create and manage classic Dataverse workflows

- Configure a workflow
- Troubleshoot workflows
- Manage workflow logs

Implement low-code logic

- Configure low-code plug-ins
- Create and manage Power Fx functions and formulas
- Create and configure business rules

Manage environments (15–20%)

Participate in application lifecycle management (ALM)

- Describe use cases for app checker and solution checker
- Create and manage Dataverse solutions
- Describe the difference between managed and unmanaged Dataverse solutions
- Manage Microsoft Power Platform environments for development
- Import and export Dataverse solutions

Manage interoperability with other services

- Configure email integration
- Configure Microsoft SharePoint integration
- Describe options for document management

- Work with Microsoft Word templates

Skills measured as of April 20, 2026

Audience profile

As a candidate for this exam, you should deliver actionable insights by working with available data and applying domain expertise. You should:

- Provide meaningful business value through easy-to-comprehend data visualizations.
- Enable others to perform self-service analytics.

As a Power BI data analyst, you work closely with business stakeholders to identify business requirements. You collaborate with analytics engineers and data engineers to identify and acquire data. You use Power BI to:

- Prepare the data
- Model the data
- Visualize and analyze data
- Manage and secure Power BI

You should be proficient at using Power Query and Data Analysis Expressions (DAX).

Skills at a glance

- Prepare the data (25–30%)

- Model the data (25–30%)
- Visualize and analyze the data (25–30%)
- Manage and secure Power BI (15–20%)

Prepare the data (25–30%)

Get or connect to data

- Identify and connect to data sources or a shared semantic model
- Change data source settings, including credentials and privacy levels
- Choose between DirectLake, DirectQuery, and Import
- Create and modify parameters

Profile and clean the data

- Evaluate data, including data statistics and column properties
- Resolve inconsistencies, unexpected or null values, and data quality issues
- Resolve data import errors

Transform and load the data

- Select appropriate column data types
- Create and transform columns
- Group and aggregate rows
- Pivot, unpivot, and transpose data
- Convert semi-structured data to a table
- Create fact tables and dimension tables
- Identify when to use reference or duplicate queries and the resulting impact
- Merge and append queries
- Identify and create appropriate keys for relationships

- Configure data loading for queries

Model the data (25–30%)

Design and implement a data model

- Configure table and column properties
- Implement role-playing dimensions
- Define a relationship's cardinality and cross-filter direction
- Create a common date table
- Identify use cases for calculated columns and calculated tables

Create model calculations by using DAX

- Create single aggregation measures
- Use the CALCULATE function
- Implement time intelligence measures
- Use basic statistical functions
- Create semi-additive measures
- Create a measure by using quick measures
- Create calculated tables or columns
- Create calculation groups

Optimize model performance

- Improve performance by identifying and removing unnecessary rows and columns
- Identify poorly performing measures, relationships, and visuals by using Performance Analyzer and DAX query view
- Improve performance by reducing granularity

Visualize and analyze the data (25–30%)

Create reports

- Select an appropriate visual
- Format and configure visuals
- Create a narrative visual with Copilot
- Apply and customize a theme
- Apply conditional formatting
- Apply slicing and filtering
- Use Copilot to create a new report page
- Use Copilot to suggest content for a new report page
- Configure the report page
- Choose when to use a paginated report
- Create visual calculations by using DAX

Enhance reports for usability and storytelling

- Configure bookmarks
- Create custom tooltips
- Edit and configure interactions between visuals
- Configure navigation for a report
- Apply sorting to visuals
- Configure sync slicers
- Group and layer visuals by using the Selection pane
- Configure drillthrough navigation, including pages, filters, and buttons
- Configure export settings
- Design reports for mobile devices
- Enable personalization in a report, including personalized visuals
- Design and configure Power BI reports for accessibility

- Configure automatic page refresh

Identify patterns and trends

- Use the Analyze feature in Power BI
- Use grouping, binning, and clustering
- Use AI visuals
- Use reference lines, error bars, and forecasting
- Detect outliers and anomalies
- Use Copilot to summarize the underlying semantic model

Manage and secure Power BI (15–20%)

Create and manage workspaces and assets

- Create and configure a workspace
- Configure and update an app
- Publish, import, or update items in a workspace
- Create dashboards
- Choose a distribution method
- Configure subscriptions and data alerts
- Promote or certify Power BI content
- Identify when a gateway is required
- Configure a semantic model scheduled refresh

Secure and govern Power BI items

- Assign workspace roles
- Configure item-level access
- Configure access to semantic models

- Implement row-level security roles
- Configure row-level security group membership
- Apply sensitivity labels

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of March 19, 2026

Audience profile

As a candidate for this exam, you design, develop, test, and troubleshoot solution components using the extension points of Microsoft Power Platform. Your expertise encompasses implementing:

- custom user experiences and business logic.
- system integrations.
- data conversions.
- custom process automation.
- complex Power Fx logic.
- Power Automate workflow expressions.
- AI as part of your solution logic.

You must have applied knowledge of:

- Microsoft Power Platform services, including in-depth understanding of its capabilities, boundaries, and constraints.

- authentication, security, and application lifecycle management (ALM) practices for the Microsoft Power Platform.
- Microsoft Power Platform developer tools including Power Platform CLI as part of the developer workflow.
- AI tools, including agents, to improve development and troubleshooting solutions.

As a candidate, you should have development experience that includes Microsoft Power Platform services, JavaScript, JSON, TypeScript, C#, HTML, RESTful Web APIs, Visual Studio, Visual Studio Code, and Microsoft Azure.

Skills at a glance

- Create a technical design (10–15%)
- Build Power Platform solutions (10–15%)
- Implement Power Apps improvements (10–15%)
- Extend the user experience (10–15%)
- Extend the platform (30–35%)
- Develop integrations (10–15%)

Create a technical design (10–15%)

Design technical architecture

- Analyze the technical architecture to identify solution components and their implementation approach
- Design the authentication and authorization strategy for solution components
- Determine whether requirements can be met with out-of-the-box functionality
- Determine where to implement business logic including cloud computing, client-side processing, business rules, plug-ins, and Power Automate
- Determine when to use standard tables, virtual tables, elastic tables, or connectors
- Assess the impact of Microsoft Power Platform security features on solution components including data loss prevention (DLP) policies, security roles, teams, business units, and row sharing

Design solution components

- Design Power Apps reusable components including canvas components, code components (Power Apps component framework), and client scripting
- Design custom connectors
- Design Dataverse code components including Power Fx functions, plug-ins, and custom APIs
- Design automations including Power Automate cloud flows
- Design inbound and outbound integrations using Dataverse and Azure

Build Power Platform Solutions (10–15%)

Configure and troubleshoot Microsoft Power Platform

- Troubleshoot operational security issues
- Configure Dataverse security roles to support code components including the principle of least privilege
- Manage Microsoft Power Platform environments for development

Implement application lifecycle management (ALM)

- Manage solution dependencies
- Create and use environment variables
- Manage solution layers
- Implement and extend Power Platform Pipelines
- Create Continuous Integration/Continuous Deployment (CI/CD) automations using Power Platform Build Tools

Implement Power Apps improvements (10–15%)

Implement advanced canvas apps features

- Implement complex Power Fx formulas and functions

- Build reusable component libraries
- Utilize Power Automate cloud flows to implement business logic from a canvas app

Optimize and troubleshoot apps

- Troubleshoot canvas and model-driven app issues by using Monitor and other browser-based debugging tools
- Optimize canvas app performance including pre-loading data and query delegation
- Optimize model-driven app performance including forms and views

Extend the user experience (10–15%)

Apply business logic in model-driven apps using client scripting

- Build JavaScript code that targets the Client API object model
- Determine event handler registration approach
- Create client scripting that targets the Dataverse Web API
- Configure commands and buttons using Power Fx and JavaScript
- Implement navigation to custom pages using the Client API

Create a Power Apps component framework (PCF) code component

- Demonstrate the use of the different lifecycle events
- Configure a code component manifest
- Implement component interfaces
- Package, deploy, and consume a component
- Configure and use Device, Utility, and Web API features in component logic

Extend the platform (30–35%)

Create a Dataverse plug-in

- Demonstrate the use of the different event execution pipeline stages

- Develop a plug-in that uses the execution context
- Develop a plug-in that implements business logic
- Implement Pre Images and Post Images to support plug-in logic
- Perform operations in plug-ins by using the Organization service
- Optimize plug-in performance
- Configure a Dataverse custom API message
- Register plug-in components by using the Plug-in Registration Tool
- Develop a plug-in that implements a custom API
- Configure Dataverse business events

Create custom connectors

- Create an Open API definition for an existing REST API
- Implement authentication for custom connectors
- Configure policy templates to modify connector behavior at runtime
- Import definitions from existing APIs including Open API definitions, Azure services, and GitHub
- Create a custom connector for an Azure service
- Develop an Azure Function to be used in a custom connector
- Extend the Open API definition for a custom connector
- Develop code for a custom connector to transform data

Use platform APIs

- Perform operations with the Dataverse Web API
- Perform operations with the Organization service
- Implement API limit retry policies
- Optimize for performance, concurrency, transactions, and bulk operations
- Perform authentication by using OAuth

Process workloads by using Azure Functions

- Process long-running operations by using Azure Functions for Microsoft Power Platform solutions
- Implement scheduled and event-driven triggers in Azure Functions for Microsoft Power Platform solutions
- Authenticate to Microsoft Power Platform by using managed identities

Configure Power Automate cloud flows

- Configure Dataverse connector actions and triggers
- Implement complex expressions in flow steps
- Manage sensitive input and output parameters
- Utilize Azure Key Vault
- Implement flow control actions including error handling
- Configure trigger filter and retry policies
- Develop reuseable logic by using child flows
- Implement Microsoft Entra ID service principles

Develop integrations (10–15%)

Publish and consume Dataverse events

- Publish a Dataverse event by using the IServiceEndpointNotificationService
- Publish a Dataverse event by using the Plug-in Registration Tool
- Register service endpoints including webhooks, Azure Service Bus, and Azure Event Hub
- Recommend options for listening to Dataverse events

Implement data synchronization with Dataverse

- Perform data synchronization by using change tracking
- Develop code that utilizes alternate keys

- Utilize the UpsertRequest message to synchronize data

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 8, 2024

Audience profile

Audience Profile

As a candidate for this exam, you automate Windows-based, browser-based, and terminal-based applications that are time-consuming or contain repetitive processes. You use a mix of automation approaches like:

- UI
- API

- Database

You analyze, design, and implement automations by using Power Automate desktop flows and cloud flows. As a robotic process automation (RPA) developer, you use actions for logic and work with:

- Data
- Applications
- Services

You work with business stakeholders to optimize business workflows. You partner with administrators to deploy and support solutions in other environments.

Additionally, as a candidate, you should have experience with:

- The Windows desktop environment
- Scripting languages such as VBScript and JavaScript
- .NET Framework for use in custom actions
- Microsoft Dataverse

Skills at a glance

- Design automations (25–30%)
- Develop automations (45–50%)
- Deploy and manage automations (20–25%)

Design automations (25–30%)

Design automations using Power Automate features and capabilities

- Leverage the Power Automate ecosystem
- Differentiate between cloud flows and desktop flows
- Design automations using desktop flows and cloud flows
- Differentiate trigger types for cloud flows

- Differentiate options for interacting with target applications and browsers
- Differentiate the different methods for running a desktop flow
- Assess the ability to run cloud and desktop flows concurrently
- Recommend running desktop flows attended versus unattended
- Differentiate HTTP actions in cloud and desktop flows
- Assess if work queues are applicable for the automation
- Design custom actions

Design automations using other Microsoft Power Platform features and capabilities

- Design automations that include canvas and model-driven apps
- Design automations using connectors, custom connectors, connection references, and connections for cloud flows
- Design automations that include Microsoft Dataverse

Design automations that analyze and enhance data and documents

- Differentiate Microsoft AI options for processing documents in desktop and cloud flows
- Differentiate Microsoft AI options for processing data in desktop and cloud flows
- Recommend optical character recognition (OCR) capabilities in desktop flows
- Recommend Document Automation Toolkit for use in automation design

Design automations using scripting languages in desktop flows

- Design automations using scripting languages including PowerShell and Visual Basic Script (VBScript)
- Recommend automation use cases that use JavaScript
- Design an automation that uses the document object model (DOM)

Develop automations (45–50%)

Develop cloud flows

- Develop a cloud flow that calls a desktop flow
- Develop and use child cloud flows including passing and returning data
- Perform actions in cloud flows by calling external APIs
- Implement trigger conditions and concurrency in cloud flows
- Implement timeout and retry policies in cloud flows
- Implement data objects and data operations in cloud flows
- Perform text parsing including JSON, XML, and CSV in cloud flows

Develop desktop flows

- Implement UI options
- Implement datatables, lists, and custom objects in desktop flows
- Implement subflows in desktop flows
- Perform actions in desktop flows by calling external APIs
- Implement timeout and retry in desktop flows
- Implement data objects and data operations in desktop flows
- Perform text parsing including JSON, XML, and CSV in desktop flows
- Implement custom actions in desktop flows

Implement logic in cloud and desktop flows

- Implement flow control in cloud and desktop flows including loops
- Implement expressions in cloud flows
- Implement variable actions for cloud and desktop flows
- Implement secure input and output data in actions in cloud flows
- Implement secure variables in desktop flows
- Implement priority for desktop flows in a queue

- Implement exception handling blocks in cloud and desktop flows to handle system exceptions
- Implement error handling routines in cloud and desktop flows to handle business exceptions
- Implement work queues in cloud and desktop flows

Build custom connectors and implement connector configurations

- Build a custom connector
- Implement authentication for custom connectors
- Implement custom connector policy templates
- Develop code in a custom connector

Perform automation infrastructure management

- Recommend credential management practices
- Utilize on-premises data gateway to connect resources from cloud flows
- Build components in Microsoft Dataverse solutions

Test automations and finalize development efforts

- Test a cloud flow
- Test a desktop flow
- Utilize environment variables and configuration files to manage configurations
- Utilize debugging features in cloud and desktop flows

Deploy and manage automations (20–25%)

Perform target environment preparation

- Implement Microsoft Power Platform application lifecycle management (ALM)
- Differentiate credentials used for different environments

- Recommend how to deploy solution components to other environments
- Build virtual desktop environments for unattended desktop flow execution

Assess data loss prevention (DLP) policies for RPA execution

- Assess Microsoft Power Platform DLP policies
- Assess how DLP policies impact actions in cloud and desktop flows
- Assess how DLP policies apply to custom connectors

Implement access to RPA components

- Perform sharing of cloud and desktop flows
- Perform sharing of machines and machine groups
- Recommend security roles required to run and monitor cloud and desktop flows
- Implement service accounts and service principals

Implement machine groups and queues required for desktop flow automations

- Assess machine and machine group requirements
- Perform machine registration management
- Perform machine group management
- Implement load balancing of desktop flows by using machine groups and queues
- Perform operations on the run queue to manage desktop flows
- Analyze cloud and desktop flow run history from the Power Automate portal

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Skills measured prior to July 8, 2024

Audience profile

Candidates for this exam automate Windows-based, browser-based, and terminal-based applications that are time-consuming or contain repetitive processes. They use a mix of approaches like UI, API, and database automations.

Candidates analyze and design processes for automation and implement automations using Power Automate for desktop and Power Automate cloud flows. RPA developers use actions for logic and to work with data, applications, and services.

Candidates work with business stakeholders to optimize business workflows. They work with administrators to deploy solutions to other environments and support solutions.

Additionally, candidates should have experience with the Windows desktop environment, scripting languages, Power Automate cloud and desktop flows, AI Builder, Process Advisor, and Microsoft Dataverse.

- Design automations (30–35%)
- Develop automations (40–45%)
- Deploy and manage automations (20–25%)

Design automations (30–35%)

Describe Power Automate features and capabilities

- Identify the Power Automate ecosystem and offerings
- Identify the differences among cloud flows, and desktop flows, and business process flows
- Identify when to use a desktop flow or a cloud flow, and when to use them together
- Identify the different trigger types for cloud flows
- Identify options for interacting with target applications and browsers
- Identify the different methods for running a desktop flow
- Identify considerations for running cloud and desktop flows concurrently
- Identify considerations for running desktop flows attended versus unattended
- Differentiate HTTP actions in cloud and desktop flows

Work with other Microsoft Power Platform offerings

- Identify how canvas apps and model-driven apps work with automation
- Identify use cases for connectors, custom connectors, connection references, and connections for cloud flows
- Identify use cases for Microsoft Dataverse

Record and analyze processes

- Create processes in Process Advisor
- Identify the steps for Process mining
- Identify the steps for Task mining
- Identify the use cases for Process Advisor

Identify how to analyze and enhance data and documents

- Identify Microsoft AI options for processing documents in desktop and cloud flows
- Identify Microsoft AI options for processing data in desktop and cloud flows
- Identify optical character recognition (OCR) capabilities in desktop flows
- Identify use cases for the Document Automation Toolkit

Identify use cases for scripting languages in desktop flows

- Identify use cases for scripting languages including PowerShell and VBScript
- Identify use cases for application-specific macro languages including VBA in Microsoft Excel and Office Scripts
- Identify use cases for using JavaScript
- Identify how to use the document object model (DOM) in automation

Develop automations (40–45%)

Create and manage cloud flows

- Create a cloud flow
- Create a cloud flow that calls a desktop flow
- Create and use child cloud flows including how to pass data to a child cloud flow and return data back
- Perform actions in cloud flows by calling external APIs
- Configure filter conditions and concurrency in cloud flows

- Configure timeout and retry policies in cloud flows
- Implement data objects in cloud flows
- Identify common processes for parsing text including JSON, XML, and CSV in cloud flows
- Configure cloud flow action to run Microsoft Office Scripts

Create and manage desktop flows

- Create desktop flows to launch, connect to, and authenticate target application
- Configure user interface (UI) options
- Configure datatables, lists, and custom objects in desktop flows
- Implement subflows in desktop flows
- Add desktop actions to exit from target applications
- Perform actions in desktop flows by calling external APIs
- Configure timeout and retry in desktop flows
- Implement data objects in desktop flows
- Identify common processes for parsing text including JSON, XML, and CSV in desktop flows

Implement logic in cloud and desktop flows

- Configure flow control in cloud and desktop flows including loops
- Configure expressions in cloud flows
- Configure variable actions for cloud and desktop flows
- Configure secure input and output data in actions in cloud flows
- Configure secure variables in desktop flows
- Configure priority for desktop flows in a queue
- Create exception handling blocks in cloud and desktop flows to handle system exceptions

- Create error handling routines in cloud and desktop flows to handle business exceptions
- Configure document processing by using AI Builder

Create and configure custom connectors

- Create a custom connector
- Implement authentication for custom connectors
- Identify custom connector policy templates
- Write code in a custom connector

Manage automation infrastructure

- Configure credential management
- Connect cloud flows to on-premises data by using the on-premises data gateway
- Create and manage components in Microsoft Dataverse solutions

Test automations and finalize development efforts

- Run and test a cloud flow
- Run and test a desktop flow
- Manage configurations by using environment variables and configuration files
- Debug solutions by using Power Automate cloud and desktop flows debugging features

Deploy and manage automations (20–25%)

Prepare target environments

- Implement Microsoft Power Platform application lifecycle management (ALM)
- Differentiate credentials used for different environments
- Deploy RPA solutions to other environments

- Prepare virtual desktop environments for unattended desktop flow execution

Evaluate data loss prevention (DLP) policies for RPA execution

- Identify Microsoft Power Platform data loss prevention (DLP) policies
- Identify how DLP policies impact actions in cloud and desktop flows
- Identify how DLP policies apply to custom connectors

Manage access to RPA components

- Share a cloud flow
- Share a desktop flow
- Share machines and machine groups
- Identify security roles required to run and monitor cloud and desktop flows
- Create service accounts and service principals

Configure machine groups and queues required for desktop flow automations

- Identify use cases for and capabilities of machines and machine groups
- Manage machine registrations
- Create and manage machine groups
- Implement load balancing of desktop flows by using machine groups and queues
- Work with queues and queue operations for desktop flows
- Evaluate cloud and desktop flow run history from the Power Automate portal

Study guide for PL-600: Microsoft Power Platform Solution Architect

Article • 10/06/2024

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of September 23, 2024

Audience profile

As a candidate for this exam, you should have solution architecture experience across functional and technical disciplines of Microsoft Power Platform. You should be able to facilitate design decisions based on recommended practices across development, configuration, integration, infrastructure, security, licensing, storage, and change management.

In this role, you are required to architect and ensure the successful implementation of appropriate end-to-end solutions to address business and technical needs of organizations.

You should have knowledge of:

- Microsoft Power Platform
- Dynamics 365 customer engagement apps
- Related Microsoft cloud solutions
- Other third-party technologies

Candidates should be aware of Power Platform Well-Architected framework and ideally have used it for implementation.

Skills at a glance

- Perform solution envisioning and requirement analysis (45–50%)
- Architect a solution (35–40%)
- Implement the solution (15–20%)

Perform solution envisioning and requirement analysis (45–50%)

Initiate solution planning

- Evaluate business requirements
- Identify Microsoft Power Platform solution components
- Identify and select components from existing apps, Microsoft Dynamics 365 apps, AppSource apps, Azure, third-party components, and independent software vendors (ISVs)
- Identify and estimate migration and integration efforts and alternatives

Identify organization information and metrics

- Guide the process of collecting the current state business processes

- Assess an organization's risk factors
- Review key success criteria

Identify existing solutions and systems

- Evaluate an organization’s enterprise architecture
- Identify data sources needed for a solution
- Define use cases and quality standards for existing data

Capture requirements

- Refine high-level requirements
- Identify functional requirements
- Identify non-functional requirements
- Guide the process of designing and improving the future state business processes

Perform fit/gap analyses

- Determine the feasibility of meeting specific requirements
- Evaluate Dynamics 365 apps and AppSource options to solve requirements
- Address functional gaps through alternate solutions
- Determine the scope for a solution

Architect a solution (35–40%)

Lead the design process

- Design the solution topology
- Identify customization approach for existing apps
- Design and validate user experience prototypes
- Identify opportunities for component reuse
- Communicate system design visually

- Design a data migration strategy
- Design apps by grouping required features based on role or task
- Design a data visualization strategy
- Design an automation strategy
- Design environment strategy

Design the data model

- Design relationships and relationship behaviors
- Determine when to connect to external data versus import data
- Design data models to address complex sets of requirements

Design integrations

- Design collaboration suite integration including Microsoft Teams and SharePoint
- Design integrations between Microsoft Power Platform solutions and Dynamics 365 apps
- Design integrations with an organization's existing systems
- Design third-party integrations
- Design an authentication strategy
- Design a business continuity strategy
- Design robotic process automation (RPA)
- Assess possibilities of networking to support integrations

Design the security model

- Design the business unit and team structure
- Design security roles
- Design column and row level security
- Design security models to address complex sets of requirements

- Determine security model management policies and processes
- Identify Microsoft Entra ID groups and app registrations required to support a solution
- Identify data loss prevention (DLP) policies for a solution
- Determine how external users will access a solution

Implement the solution (15–20%)

Validate the solution design

- Evaluate detailed designs and implementation
- Review the security across the solution including business rules, user roles, Entra ID requirements and security boundaries
- Ensure that the solution conforms to API limits
- Assess the solution performance and impact on resources
- Resolve automation conflicts
- Resolve integration conflicts

Support go-live

- Identify and resolve potential and actual performance issues
- Escalate and provide options to resolve data migration issues
- Resolve any identified issues with deployment plans
- Identify factors that impact go-live readiness and remediate issues

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Skills measured prior to September 23, 2024

Audience profile

As a candidate for this exam, you're a solution architect who:

- Leads successful implementations.
- Focuses on how solutions address the broader business and technical needs of organizations.

This role requires you to have the ability to identify opportunities to solve business problems.

You should have functional and technical knowledge of:

- Microsoft Power Platform
- Dynamics 365 customer engagement apps
- Related Microsoft cloud solutions
- Other third-party technologies

You apply knowledge and experience throughout an engagement. You perform proactive and preventative work to:

- Increase the value of the customer’s investment.
- Promote organizational health.

As a candidate for this exam, you should have experience across functional and technical disciplines of Microsoft Power Platform. You should be able to facilitate design decisions across development, configuration, integration, infrastructure, security, licensing, availability, storage, and change management. In this role, you balance project's business needs while meeting functional and non-functional requirements.

Skills at a glance

- Perform solution envisioning and requirement analysis (35–40%)
- Architect a solution (40–45%)
- Implement the solution (15–20%)

Perform solution envisioning and requirement analysis (35–40%)

Initiate solution planning

- Evaluate business requirements
- Identify Microsoft Power Platform solution components
- Identify other components including existing apps, Microsoft Dynamics 365 apps, AppSource apps, third-party components, and components from independent software vendors (ISVs)
- Identify and estimate migration and integration efforts

Identify organization information and metrics

- Identify desired high-level organizational business processes
- Identify business process improvement opportunities
- Assess an organization's risk factors
- Review key success criteria

Identify existing solutions and systems

- Evaluate an organization’s enterprise architecture
- Identify data sources needed for a solution
- Define use cases and quality standards for existing data
- Identify and document an organization's existing business processes

Capture requirements

- Refine high-level requirements
- Identify functional requirements
- Identify non-functional requirements
- Confirm that requirements meet an organization's goals
- Identify and document an organization's desired business processes

Perform fit/gap analyses

- Determine the feasibility of meeting specific requirements
- Evaluate Dynamics 365 apps and AppSource options to solve requirements
- Address functional gaps through alternate solutions
- Determine the scope for a solution

Architect a solution (40–45%)

Lead the design process

- Design the solution topology
- Design customizations for existing apps
- Design and validate user experience prototypes
- Identify opportunities for component reuse
- Communicate system design visually

- Design application lifecycle management (ALM) processes
- Design a data migration strategy
- Design apps by grouping required features based on role or task
- Design a data visualization strategy
- Design an automation strategy that uses Power Automate
- Design environment strategy

Skills measured as of July 24, 2026

Audience profile

As a candidate for this exam, you aspire to understand how Microsoft Power Platform technologies can be used to:

- Develop tailored business solutions.
- Optimize your use of data by using Microsoft Dataverse and connectors.
- Accelerate business outcomes by using AI-powered solutions in Microsoft Power Apps.
- Automate business processes by using Microsoft Power Automate.
- Boost your productivity and create agents by using Copilot Studio.

The exam is intended for you if you're seeking to start your journey building solutions with Microsoft Power Platform.

You can use this exam to prepare for role-based certifications, but it's not a prerequisite for any of them.

Skills at a glance

- Describe the business value of Microsoft Power Platform (5–10%)
- Manage the Microsoft Power Platform environment (20–25%)
- Demonstrate the capabilities of Power Apps (20–25%)
- Demonstrate the capabilities of Power Automate (20–25%)
- Describe features and capabilities of agents in Microsoft Copilot Studio (20–25%)

Describe the business value of Microsoft Power Platform (5–10%)

Describe the business value of Microsoft Power Platform services

- Describe the value of Microsoft Power Apps to build applications
- Describe the value of Microsoft Power Automate to automate processes
- Describe the value of Microsoft Dataverse to organize business data
- Describe the value of connectors to integrate services and data for apps and flows
- Describe the value of Microsoft Power Pages to build websites
- Describe the value of generative AI features in Microsoft Power Platform
- Describe the value of Copilot Studio to create agents

Manage the Microsoft Power Platform environment (20–25%)

Describe Microsoft Dataverse

- Describe differences between traditional databases and Dataverse
- Describe tables, columns, and relationships
- Describe table forms and views
- Describe the options for business logic in Dataverse, including Power Fx
- Describe how to use AI to create and edit tables, columns, and relationships

Describe Microsoft Power Platform administration and governance

- Describe environments
- Describe the Microsoft Power Platform security model
- Describe how Microsoft Power Platform supports data privacy and accessibility guidelines
- Describe the monitoring and analytics capabilities of the Microsoft Power Platform
- Describe application lifecycle management (ALM) with Microsoft Power Platform pipelines

Demonstrate the capabilities of Power Apps (20–25%)

Describe Power Apps capabilities and use cases

- Describe use cases for and capabilities of canvas apps
- Describe use cases for and capabilities of model-driven apps
- Describe use cases for and capabilities of Plan designer
- Describe use cases for and capabilities of code apps

Describe how to build basic apps by using Power Apps

- Describe how to use AI to create a canvas app
- Describe how to use AI to create a model-driven app
- Describe creating AI-powered apps by using the vibe experience

Demonstrate the capabilities of Power Automate (20–25%)

Describe Power Automate use cases and capabilities

- Describe use cases for cloud and desktop flows
- Describe Power Automate use cases for approvals, Microsoft Teams, Outlook, SharePoint, Forms, and document automation

Describe how to build basic flows by using Power Automate

- Describe connector triggers and actions for cloud flows
- Describe how to use AI to create and modify cloud flows
- Describe how to use AI to create and modify desktop flows

Describe features and capabilities of agents in Microsoft Copilot Studio (20–25%)

Describe how to build agents in Copilot Studio

- Describe use cases for agents

- Describe how to build agent conversation paths by using topics
- Describe how to use knowledge sources in agents
- Describe how tools, including MCP servers and agent flows, are used in agents
- Describe how to publish agents by using channels

Describe how to manage agents in Copilot Studio

- Describe use cases and capabilities for Microsoft Agent 365
- Describe how to monitor Copilot Studio agent usage and adoption
- Describe agent evaluations

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't

available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 28, 2026

Audience profile

As a Microsoft cybersecurity architect, you translate a cybersecurity strategy into capabilities that protect the assets, business, and operations of an organization. You design, guide the implementation of, and maintain security solutions that follow Zero Trust principles and best practices, including security strategies for identity, devices, data, AI, applications, network, infrastructure, and DevOps. Plus, you design solutions for Governance, Risk, and Compliance (GRC), security operations, and security posture management.

As a cybersecurity architect, you continuously collaborate with leaders and practitioners in security, privacy, engineering, and other roles across an organization to plan and implement a cybersecurity strategy that meets the business needs of an organization.

As a candidate for this exam, you have experience implementing or administering solutions in the following areas: identity and access, platform protection, security operations, data and AI security, application security, and hybrid and multicloud infrastructures. You should have expert skills in at least one of those areas, and you should have experience designing security solutions that include Microsoft security technologies.

Skills at a glance

- Design solutions that align with security best practices and priorities (20–25%)
- Design security operations, identity, and compliance capabilities (25–30%)
- Design security solutions for infrastructure (25–30%)

- Design security solutions for applications and data (20–25%)

Design solutions that align with security best practices and priorities (20–25%)

Design a resiliency strategy for ransomware and other attacks based on Microsoft Security Best Practices

- Design a security strategy to support business resiliency goals, including identifying and prioritizing threats to business-critical assets
- Design solutions for business continuity and disaster recovery (BCDR), including secure backup and restore for hybrid and multicloud environments
- Design solutions for mitigating ransomware attacks, including prioritization of BCDR and privileged access
- Evaluate solutions for security updates

Design solutions that align with the Microsoft Cybersecurity Reference Architectures (MCRA) and Microsoft Cloud Security Benchmark (MCSB)

- Design solutions that align with best practices for cybersecurity capabilities and controls
- Design solutions that align with best practices for protecting against insider, external, and supply chain attacks
- Design AI solutions that align to the Microsoft Cloud Security Benchmark.
- Design solutions that align with the Zero Trust adoption framework

Design solutions that align with the Microsoft Cloud Adoption Framework for Azure (CAF) and the Azure Well-Architected Framework

- Design a strategy for secure AI adoption
- Design a new or evaluate an existing strategy for security and governance based on the Microsoft Cloud Adoption Framework for Azure (CAF) and the Azure Well-Architected Framework (WAF)
- Recommend solutions for security and governance based on the Microsoft Cloud Adoption Framework for Azure (CAF) and the Azure Well-Architected Framework

- Design solutions for implementing and governing security by using Azure landing zones
- Design a DevSecOps process that aligns with best practices in the Microsoft Cloud Adoption Framework for Azure (CAF)

Design security operations, identity, and compliance capabilities (25–30%)

Design solutions for security operations

- Design a solution for detection and response that includes extended detection and response (XDR) and security information and event management (SIEM)
- Design a solution for centralized logging and auditing, including Microsoft Purview Audit
- Design monitoring to support hybrid and multicloud environments
- Design a solution for security orchestration and automated response (SOAR), including Microsoft Sentinel and Microsoft Defender XDR
- Design and evaluate security workflows, including incident response, threat hunting, and incident management
- Design and evaluate threat detection coverage by using MITRE ATT&CK matrices, including Enterprise, Mobile, and industrial control systems (ICS)

Design solutions for identity and access management

- Design a solution for agent identities using Microsoft Entra Agent ID and conditional access policies
- Design a solution for access to software as a service (SaaS), platform as a service (PaaS), infrastructure as a service (IaaS), hybrid/on-premises, and multicloud resources, including identity, networking, and application controls
- Design a solution for Microsoft Entra ID, including hybrid and multi-cloud environments
- Design a solution for external identities, including business-to-business (B2B) and decentralized identity
- Design a modern authentication and authorization strategy, including Conditional Access, continuous access evaluation, risk scoring, and protected actions

- Validate the alignment of Conditional Access policies with a Zero Trust strategy
- Specify requirements to harden Active Directory Domain Services (AD DS)
- Design a solution to manage secrets, keys, and certificates

Design solutions for securing privileged access

- Design a solution for assigning and delegating privileged roles by using the enterprise access model
- Evaluate the security and governance of Microsoft Entra ID, including Microsoft Entra Privileged Identity Management (PIM), entitlement management, and access reviews
- Evaluate the security and governance of Active Directory Domain Services (AD DS), including resilience to common attacks
- Design a solution for securing the administration of cloud tenants, including SaaS and multicloud infrastructure and platforms
- Design a solution for cloud infrastructure entitlement management
- Evaluate an access review management solution
- Design a solution for secure workstations for privileged access, including remote access

Design solutions for regulatory compliance

- Translate compliance requirements into security controls
- Design a solution to address compliance requirements by using Microsoft Purview
- Design Azure Policy solutions to address security and compliance requirements
- Evaluate and validate alignment with regulatory standards and benchmarks by using Microsoft Defender for Cloud

Design security solutions for infrastructure (25–30%)

Design solutions for security posture management in hybrid and multicloud environments

- Evaluate security posture by using Microsoft Defender for Cloud, including the Microsoft Cloud Security Benchmark (MCSB)

- Evaluate security posture by using Microsoft Secure Score
- Design integrated security posture management solutions that include Microsoft Defender for Cloud in hybrid and multi-cloud environments
- Select cloud workload protection solutions in Microsoft Defender for Cloud
- Design a solution for integrating hybrid and multicloud environments by using Azure Arc
- Design a solution for Microsoft Defender External Attack Surface Management (Defender EASM)
- Specify requirements and priorities for a posture management process that uses Microsoft Security Exposure Management attack paths, attack surface reduction, security insights, and initiatives

Specify requirements for securing server and client endpoints

- Specify security requirements for servers, including multiple platforms and operating systems
- Specify security requirements for mobile devices and clients, including endpoint protection, hardening, and configuration
- Specify security requirements for IoT devices and embedded systems
- Evaluate solutions for securing operational technology (OT) and industrial control systems (ICS) by using Microsoft Defender for IoT
- Specify security baselines for server and client endpoints
- Evaluate Windows Local Administrator Password Solution (Windows LAPS) solution

Specify requirements for securing SaaS, PaaS, and IaaS services

- Specify security baselines for SaaS, PaaS, and IaaS services
- Specify security requirements for IoT workloads
- Specify security requirements for web workloads
- Specify security requirements for containers
- Specify security requirements for container orchestration

- Evaluate solutions that include Azure AI services security

Evaluate solutions for network security and Security Service Edge (SSE)

- Evaluate network designs to align with security requirements and best practices
- Evaluate solutions that use Microsoft Entra Internet Access as a secure web gateway
- Evaluate solutions that use Microsoft Entra Internet Access for Microsoft Services, including cross-tenant configurations
- Evaluate solutions that use Microsoft Entra Private Access

Design security solutions for applications and data (20–25%)

Evaluate solutions for securing Microsoft 365

- Evaluate security posture for productivity and collaboration workloads by using metrics, including Microsoft Secure Score
- Evaluate solutions that include Microsoft Defender for Office 365 and Microsoft Defender for Cloud Apps
- Evaluate device management solutions that include Microsoft Intune
- Evaluate solutions for securing data in Microsoft 365 by using Microsoft Purview
- Evaluate data security and compliance controls in Microsoft Copilot for Microsoft 365 services

Design solutions for securing applications

- Evaluate the security posture of existing application portfolios
- Evaluate threats to business-critical applications by using threat modeling
- Design and implement a full lifecycle strategy for application security
- Design and implement standards and practices for securing the application development process
- Map technologies to application security requirements
- Design a solution for workload identities to authenticate and access Azure resources

- Design a solution for API management and security
- Design solutions that secure applications by using Azure Web Application Firewall (WAF)

Design solutions for securing an organization's data

- Evaluate solutions for data discovery and classification
- Specify priorities for mitigating threats to data
- Evaluate solutions for encryption of data at rest and in transit, including Azure Key Vault and infrastructure encryption
- Design security for data used in AI workloads
- Design a security solution for data in Azure workloads, including Azure SQL, Azure Synapse Analytics, and Azure Cosmos DB
- Design a security solution for data in Azure Storage
- Design a security solution that includes Microsoft Defender for Storage and Microsoft Defender for Databases

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't

available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 28, 2026

Audience profile

As a candidate for this exam, you're a security operations analyst who reduces organizational risk by performing triage, responding to incidents, hunting for threats, and engineering detections.

As a security operations analyst, you monitor, identify, investigate, and respond to threats in multi-cloud and on-premises environments by using Microsoft Defender XDR, Microsoft Sentinel, Microsoft Entra ID, Microsoft Purview, and Microsoft Defender for Cloud workload protections. You perform hunting by using KQL and automate responses to threats.

You collaborate with business and security leadership to define security standards for the organization. You work with other roles across the digital enterprise to implement the standards, to enhance the security posture of an organization, and to raise security awareness.

As a candidate, you should be familiar with:

- Microsoft security, compliance, and identity solutions
- Microsoft 365
- Azure cloud services
- AI agents and Copilots
- Windows, Linux, and mobile operating systems.

Skills at a glance

- Manage a security operations environment (40–45%)
- Respond to security incidents (35–40%)
- Perform threat hunting (20–25%)

Manage a security operations environment (40–45%)

Configure automation for Microsoft Defender XDR and Microsoft Sentinel

- Configure email notifications in Microsoft Defender XDR, including incidents, actions, and threat analytics
- Configure alert notifications in Microsoft Defender XDR, including tuning, suppression, and correlation
- Configure Microsoft Defender for Endpoint advanced features
- Configure rules settings in Microsoft Defender for Endpoint
- Configure custom data collection in Microsoft Defender for Endpoint
- Configure security policies for Microsoft Defender for Endpoint, including attack surface reduction (ASR) rules
- Manage automated investigation and response capabilities in Microsoft Defender XDR
- Configure automatic attack disruption in Microsoft Defender XDR
- Configure and manage device groups, permissions, and automation levels in Microsoft Defender for Endpoint
- Create and configure automation rules in Microsoft Sentinel
- Create and configure Microsoft Sentinel playbooks

Configure the Microsoft Sentinel SIEM and platform

- Specify Microsoft Sentinel roles
- Manage data retention for XDR and Microsoft Sentinel tables, including Analytics, Data lake, and XDR tiers
- Create and configure Microsoft Sentinel workbooks

- Optimize the Microsoft Sentinel platform, including SOC optimization recommendations

Ingest data into the Microsoft Sentinel SIEM and platform

- Select data connectors based on data source requirements, including Windows logs and security events
- Configure collection of Windows Security events by using Windows Security Events via AMA, including data collection rules
- Plan and configure collection of Windows Security events by using Windows Event Forwarding (WEF)
- Plan and configure Syslog via AMA and Common Event Format (CEF) via AMA connectors
- Configure collection of Azure activities by using Azure Policy and resource diagnostic settings
- Ingest threat indicators into Microsoft Sentinel
- Create custom log tables in the workspace to store ingested data

Configure detections

- Create custom detection rules by using Advanced Hunting in Microsoft Defender XDR
- Manage custom detection rules in Microsoft Defender XDR
- Configure and manage analytics rules in Microsoft Sentinel SIEM, including scheduled, near-real time (NRT), threat intelligence, and machine learning
- Analyze attack vector coverage by using the MITRE ATT&CK matrix
- Configure anomalies in Microsoft Sentinel

Respond to security incidents (35–40%)

Respond to alerts and incidents in Microsoft Defender XDR

- Investigate and remediate threats by using Microsoft Defender for Office 365, including automatic attack disruption
- Investigate and remediate threats or compromised entities identified by Microsoft Purview

- Investigate and remediate alerts and incidents identified by Microsoft Defender for Cloud workload protections
- Investigate and remediate security risks identified by Microsoft Defender for Cloud Apps
- Investigate and remediate compromised identities that are identified by Microsoft Entra ID
- Investigate and remediate security alerts from Microsoft Defender for Identity
- Investigate and remediate alerts and incidents identified by Microsoft Sentinel
- Investigate incidents by using agentic AI, including embedded Microsoft Security Copilot
- Investigate complex attacks, such as multi-stage, multi-domain, and lateral movement
- Manage security incidents by using case management

Respond to alerts and incidents in Microsoft Defender for Endpoint

- Investigate device timelines
- Perform actions on the device, including live response and collecting investigation packages
- Perform evidence and entity investigation
- Investigate and remediate incidents identified by automatic attack disruption

Investigate Microsoft 365 activities to identify threats

- Investigate threats by using Microsoft Purview Audit
- Investigate threats by using Content search in Microsoft Purview eDiscovery
- Investigate threats by using Microsoft Graph activity logs

Perform threat hunting (20–25%)

Detect threats by using Microsoft Defender XDR

- Identify the appropriate table to use in a KQL query
- Identify threats by using Kusto Query Language (KQL)
- Create Advanced Hunting queries

- Interpret threat analytics in Microsoft Defender XDR
- Create hunting graphs, including blast radius
- Analyze relationships between entities by using Sentinel Graph

Detect threats by using the Microsoft Sentinel platform

- Create and monitor hunting queries
- Create and manage KQL jobs in Data lake
- Create and manage Summary rule tables for querying
- Hunt for threats by using Notebooks, including connection to the Sentinel MCP Server

Skills measured as of April 27, 2026

Audience profile

As a Microsoft identity and access administrator, you design, implement, and operate an organization's identity and access management by using Microsoft Entra. You configure and manage identities throughout their lifecycles for users, devices, Microsoft Azure resources, and applications. You are responsible for ensuring the application of Zero Trust principles for identity and access solutions.

As an identity and access administrator, you provide seamless experiences and self-service management capabilities for users. You plan and implement identity, authentication, and authorization to enable access across applications and resources. You're also responsible for troubleshooting, monitoring, and reporting on identity and access.

You collaborate with many other roles in the organization to drive strategic identity projects, modernize identity solutions, implement hybrid identity solutions, and implement identity governance.

You should be familiar with Azure, Microsoft 365 services and workloads, and Active Directory Domain Services (AD DS). You should also be familiar with PowerShell and Kusto Query Language (KQL).

Skills at a glance

- Implement and manage user identities (20–25%)

- Implement authentication and access management (25–30%)
- Plan and implement workload identities (20–25%)
- Plan and automate identity governance (20–25%)

Implement and manage user identities (20–25%)

Configure and manage a Microsoft Entra tenant

- Configure and manage built-in and custom Microsoft Entra roles
- Recommend when to use administrative units
- Configure and manage administrative units
- Evaluate effective permissions for Microsoft Entra roles
- Configure and manage domains in Microsoft Entra ID and Microsoft 365
- Configure Company branding settings
- Configure tenant properties, user settings, group settings, and device settings

Create, configure, and manage Microsoft Entra identities

- Create, configure, and manage users
- Create, configure, and manage groups
- Manage custom security attributes
- Automate bulk operations by using the Microsoft Entra admin center and PowerShell
- Manage device join and device registration in Microsoft Entra ID
- Assign, modify, and report on licenses

Implement and manage identities for external users and tenants

- Manage External collaboration settings in Microsoft Entra ID
- Invite external users, individually or in bulk
- Manage external user accounts in Microsoft Entra ID

- Implement Cross-tenant access settings
- Implement and manage cross-tenant synchronization
- Configure external identity providers, including protocols such as SAML and WS-Fed

Implement and manage hybrid identity

- Implement and manage Microsoft Entra Connect Sync
- Implement and manage Microsoft Entra Cloud Sync
- Implement and manage password hash synchronization
- Implement and manage pass-through authentication
- Implement and manage seamless single sign-on (SSO)
- Migrate from AD FS to other authentication and authorization mechanisms
- Implement and manage Microsoft Entra Connect Health

Implement authentication and access management (20–25%)

Plan, implement, and manage Microsoft Entra user authentication

- Plan for authentication
- Implement and manage authentication methods, including certificate-based authentication, Temporary Access Pass, OAuth 2.0 tokens, Microsoft Authenticator, and passkeys (FIDO2)
- Implement and manage tenant-wide multifactor authentication (MFA) settings
- Configure and deploy self-service password reset (SSPR)
- Implement and manage Windows Hello for Business
- Disable accounts and revoke user sessions
- Implement and manage Microsoft Entra password protection
- Enable Microsoft Entra Kerberos authentication for hybrid identities

Plan, implement, and manage Microsoft Entra Conditional Access

- Plan Conditional Access policies
- Implement Conditional Access policy assignments
- Implement Conditional Access policy controls
- Test and troubleshoot Conditional Access policies
- Implement session management
- Implement device-enforced restrictions
- Implement continuous access evaluation
- Configure authentication context
- Implement protected actions
- Create a Conditional Access policy from a template

Manage risk by using Microsoft Entra ID Protection

- Implement and manage user risk by using Microsoft Entra ID Protection or Conditional Access policies
- Implement and manage sign-in risk by using Microsoft Entra ID Protection or Conditional Access policies
- Implement and manage multifactor authentication registration by using authentication methods and registration campaigns
- Monitor, investigate and remediate risky users and risky sign-ins
- Monitor, investigate, and remediate risky workload identities

Implement Global Secure Access

- Deploy Global Secure Access clients
- Deploy and manage Private Access
- Deploy and manage Internet Access
- Deploy and manage Internet Access for Microsoft 365

Plan and implement workload identities (20–25%)

Plan and implement identities for applications and Azure workloads

- Select appropriate identities for applications and Azure workloads, including managed identities, service principals, user accounts, and managed service accounts
- Create managed identities
- Assign a managed identity to an Azure resource
- Use a managed identity assigned to an Azure resource to access other Azure resources

Plan, implement, and monitor the integration of enterprise applications

- Plan and implement settings for enterprise applications, including application-level and tenant-level settings
- Assign appropriate Microsoft Entra roles to users to manage enterprise applications
- Design and implement integration for on-premises apps by using Microsoft Entra Application Proxy
- Design and implement integration for software as a service (SaaS) apps
- Assign, classify, and manage users, groups, and app roles for enterprise applications
- Configure and manage user and admin consent
- Create and manage application collections

Plan and implement app registrations

- Plan for app registrations
- Create app registrations
- Configure app authentication
- Configure API permissions
- Create app roles

Manage and monitor app access by using Microsoft Defender for Cloud Apps

- Configure and analyze cloud discovery results by using Defender for Cloud Apps

- Configure connected apps
- Implement application-enforced restrictions
- Configure Conditional Access app control
- Create access and session policies in Defender for Cloud Apps
- Implement and manage policies for OAuth apps
- Manage the Cloud app catalog

Plan and automate identity governance (20–25%)

Plan and implement entitlement management in Microsoft Entra

- Plan entitlements
- Create and configure catalogs
- Create and configure access packages
- Manage access requests
- Implement and manage terms of use (ToU)
- Manage the lifecycle of external users
- Configure and manage connected organizations

Plan, implement, and manage access reviews in Microsoft Entra

- Plan for access reviews
- Create and configure access reviews
- Monitor access review activity
- Manually respond to access review activity

Plan and implement privileged access

- Plan and manage Microsoft Entra roles in Microsoft Entra Privileged Identity Management (PIM), including settings and assignments
- Plan and manage Azure resources in PIM, including settings and assignments

- Plan and configure PIM for Groups
- Manage the PIM request and approval process
- Analyze PIM audit history and reports
- Create and manage break-glass accounts

Monitor identity activity by using logs, workbooks, and reports

- Review and analyze sign-in, audit, and provisioning logs by using the Microsoft Entra admin center
- Configure diagnostic settings, including configuring destinations such as Log Analytics workspaces, storage accounts, and Azure Event Hubs
- Monitor Microsoft Entra ID by using KQL queries in Log Analytics
- Analyze Microsoft Entra ID by using workbooks and reporting
- Monitor and improve the security posture by using Identity Secure Score

Skills measured as of July 28, 2026

Audience profile

As an information security administrator, you plan and implement information security of sensitive data by using Microsoft Purview and related services. You're responsible for mitigating risks by protecting data inside collaboration environments that are managed by Microsoft 365 from internal and external threats and protecting data used by AI services. You also implement information protection, data loss prevention, retention, insider risk management, and manage information security alerts and activities.

You work with other roles that are responsible for governance, data, and security to evaluate and develop policies to address an organization's information security and risk reduction goals. You collaborate with workload administrators, business application owners, and governance stakeholders to implement technology solutions that support the necessary policies and controls. This role also participates in responding to information security incidents.

You should be familiar with all Microsoft 365 services, PowerShell, Microsoft Entra, the Microsoft Defender portal, and Microsoft Defender for Cloud Apps.

Skills at a glance

- Implement information protection (30–35%)
- Implement data loss prevention and retention (30–35%)
- Manage risks, alerts, and activities (30–35%)

Implement information protection (30–35%)

Implement and manage data classification

- Identify sensitive information requirements for an organization's data
- Translate sensitive information requirements into built-in or custom sensitive info types
- Create and manage custom sensitive info types
- Implement document fingerprinting

- Create and manage exact data match based sensitive information types (EDM)
- Create and manage trainable classifiers
- Monitor data classification and label usage by using Data explorer and Content explorer
- Configure optical character recognition (OCR) support for sensitive info types

Implement and manage sensitivity labels in Microsoft Purview

- Implement roles and permissions for administering sensitivity labels
- Define and create sensitivity labels for items and containers
- Configure protection settings and content marking for sensitivity labels
- Configure and manage publishing policies for sensitivity labels
- Configure and manage auto-labeling policies for sensitivity labels
- Apply a sensitivity label to containers, such as Microsoft Teams, Microsoft 365 Groups, Microsoft Power BI, and Microsoft SharePoint
- Apply sensitivity labels by using Microsoft Defender for Cloud Apps

Implement information protection for Windows, file shares, and Exchange

- Plan and implement the Microsoft Purview Information Protection client
- Manage files by using the Microsoft Purview Information Protection client
- Apply bulk classification to on-premises data by using the Microsoft Purview Information Protection scanner
- Design and implement Microsoft Purview Message Encryption
- Design and implement Microsoft Purview Advanced Message Encryption

Implement data loss prevention and retention (30–35%)

Create and configure data loss prevention policies

- Design data loss prevention policies based on an organization’s requirements
- Implement roles and permissions for data loss prevention

- Create and manage data loss prevention policies
- Configure data loss prevention policies for Adaptive Protection
- Interpret policy and rule precedence in data loss prevention
- Create file policies in Microsoft Defender for Cloud Apps by using a DLP policy

Implement and monitor Microsoft Purview Endpoint DLP

- Specify device requirements for Endpoint DLP, including extensions
- Configure advanced DLP rules for devices in DLP policies
- Configure Endpoint DLP settings
- Configure just-in-time protection
- Monitor endpoint activities

Implement and manage retention

- Plan for information retention and disposition by using retention labels
- Create, configure, and manage adaptive policu scopes
- Create retention labels for data lifecycle management
- Configure a retention label policy to publish labels
- Configure a retention label policy to auto-apply labels
- Interpret the results of policy precedence, including using Policy lookup
- Create and configure retention policies
- Recover retained content in Microsoft 365

Manage risks, alerts, and activities (30–35%)

Implement and manage Microsoft Purview Insider Risk Management

- Implement roles and permissions for Insider Risk Management
- Plan and implement Insider Risk Management connectors

- Plan and implement integration with Microsoft Defender for Endpoint
- Configure and manage Insider Risk Management settings
- Configure policy indicators
- Select an appropriate policy template
- Create and manage Insider Risk Management policies
- Manage forensic evidence settings
- Enable and configure insider risk levels for Adaptive Protection
- Manage insider risk alerts and cases
- Manage Insider Risk Management workflow, including notice templates

Manage information security alerts and activities

- Assign Microsoft Purview Audit (Premium) user licenses
- Investigate activities by using Microsoft Purview Audit
- Configure audit retention policies
- Analyze Purview activities by using Activity explorer
- Respond to data loss prevention alerts in the Microsoft Purview portal
- Investigate insider risk activities by using the Microsoft Purview portal
- Respond to Purview alerts in Microsoft Defender XDR
- Respond to Defender for Cloud Apps file policy alerts
- Perform searches by using eDiscovery

Protect data used by AI services

- Implement controls in Microsoft Purview to protect content in an environment that uses AI services
- Implement controls in Microsoft 365 productivity workloads to protect content in an environment that uses AI services

- Implement pre-requisites for Data Security Posture Management (DSPM) for AI
- Manage roles and permissions for DSPM for AI
- Configure DSPM for AI policies
- Monitor activities in DSPM for AI

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Study guide for Exam SC-500: Implementing End-to-End Security Controls for Cloud and AI Workloads

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.

About the exam

Languages

Some exams are localized into other languages. You can find these in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured

Audience profile

As a candidate for this Microsoft Certification, you're a security engineer who protects organizational systems and data across cloud and hybrid environments by implementing comprehensive security controls that proactively help prevent unauthorized access and mitigate risks. Your role spans multiple security domains, including identity, network, application, data, and compute. You also help ensure that platforms, data, identities, and infrastructure used by AI workloads are securely implemented and monitored.

In this role, your responsibilities include:

- Securing access to resources by using Microsoft Entra ID and Azure Key Vault.
- Enforcing security and regulatory compliance.
- Securing storage, databases, and networking.
- Securing compute.
- Securing AI solutions.
- Managing and monitoring security posture.

You work closely with architects, administrators, engineers, analysts, and developers responsible for Azure, Microsoft 365, identity and access, information protection, security operations, DevOps, application development, database platforms, and networks.

For this exam, you should have practical experience in administration of Azure and hybrid environments, including compute, network, and storage. You need strong familiarity with Microsoft Entra ID and familiarity with Microsoft 365 administration.

Skills at a glance

- Manage identity, access, and governance (20–25%)
- Secure storage, databases, and networking (25–30%)
- Secure compute (20–25%)

- Manage and monitor security posture (20–25%)

Manage identity, access, and governance (20–25%)

Secure access to resources by using Microsoft Entra ID

- Implement and configure Privileged Identity Management (PIM)
- Implement conditional access policies
- Implement and configure authentication methods, including multifactor authentication (MFA) and passwordless
- Implement and configure identity for applications, including enterprise applications and app registrations
- Manage OAuth permission grants and consent settings
- Implement and configure managed identities for Azure resources

Secure secrets and keys by using Azure Key Vault

- Deploy Key Vault
- Configure Key Vault settings
- Configure access to Key Vault
- Configure firewall settings on Key Vault
- Manage keys, secrets, and certificates
- Scan for secrets by using Defender Cloud Security Posture Management (Defender CSPM)
- Implement Defender for Key Vault

Implement governance to enforce security and regulatory compliance

- Implement and configure security controls by using Azure Policy, including built-in and custom policy definitions
- Evaluate regulatory compliance by using Microsoft Defender for Cloud
- Implement and configure security controls in Defender for Cloud, including security standards and recommendations

- Implement resource locks
- Manage Azure built-in role assignments
- Manage custom roles, including Azure roles and Microsoft Entra roles
- Evaluate and remediate overprivileged access assignments by using Azure role-based access control (RBAC)
- Configure security controls for backup protection by using Azure Backup security features
- Implement and configure security controls by using infrastructure as code

Secure storage, databases, and networking (25–30%)

Implement security for storage accounts

- Implement and configure security for storage accounts
- Configure Azure Storage firewall rules
- Implement Defender for Storage threat protection configurations
- Manage access to storage, including access policies

Implement security for databases

- Implement platform-level security configurations in Azure SQL
- Configure database auditing for Azure SQL Database and Azure SQL Managed Instance
- Configure Defender for Databases protection across Azure database services

Implement security for Azure network services

- Implement and manage network security groups (NSGs) and application security groups (ASGs)
- Implement and configure network access policies by using Azure Virtual Network Manager
- Configure security for an Azure Virtual WAN
- Implement and configure security for virtual private network (VPN) connections
- Implement and configure Microsoft Entra Private Access

- Configure Azure private endpoints to secure access to Azure platform as a service (PaaS) resources
- Configure Azure Private Link services to secure access to network resources
- Implement and configure Azure Firewall
- Evaluate effective security rules by using Azure Network Watcher diagnostics

Secure compute (20–25%)

Implement security for AI

- Identify overexposure of data in SharePoint
- Identify risks related to Microsoft Copilot and AI apps by using Microsoft Purview Data Security Posture Management (DSPM)
- Enable and configure real-time protection for Microsoft Copilot Studio agents
- Implement conditional access for Microsoft Entra Agent ID
- Analyze blast radius for security risks related to Entra Agent ID by using Defender XDR
- Manage Entra Agent ID access
- Configure and deploy AI Gateway in Azure API Management for Microsoft Foundry
- Enable Defender for AI Service in Cloud Workload Protection in Defender for Cloud
- Configure guardrails for agent security in Foundry
- Monitor AI security by using the Data and AI security dashboard in Defender for Cloud
- Manage agents in Microsoft 365 admin center

Implement security for servers and virtual machines (VMs)

- Implement and configure disk encryption
- Plan and implement Azure Bastion
- Enable and enforce use of just-in-time (JIT) VM access
- Extend security controls to hybrid and multicloud servers by using Azure Arc

- Onboard servers to Defender for Servers in Defender for Cloud, including hybrid and multicloud scenarios
- Configure Defender for Servers settings, including vulnerability scanning, and endpoint detection and response (EDR)
- Implement and manage agentless scanning for VMs in Defender for Servers
- Configure security features on a VM, including secure boot, virtual Trusted Platform Module (vTPM), integrity monitoring, and security type
- Enforce security configuration of Azure-managed servers by using Azure Machine Configuration

Implement security for application platform services

- Detect misconfigurations and runtime risks in container workloads by using Defender for Containers
- Implement and configure security controls for Azure Kubernetes Service (AKS)
- Implement and configure security controls for Azure Container Registry
- Implement and configure security controls for Azure Container Instances and Azure Container Apps
- Implement and configure security controls for Azure Functions, including authentication and network access
- Implement and configure security controls for Azure Logic Apps
- Implement and configure security controls for Azure App Service
- Implement and configure Azure Web Application Firewall
- Implement security policies for back-end API protection by using API Management

Manage and monitor security posture (20–25%)

Manage security posture by using Defender for Cloud

- Identify security risks by using Defender CSPM
- Evaluate compliance against security frameworks by using Defender for Cloud

- Enable and configure Defender for Cloud workload protection plans
- Connect hybrid cloud and multicloud environments to Defender for Cloud, including Amazon Web Services (AWS) and Google Cloud Platform (GCP)
- Configure Microsoft Defender Vulnerability Management settings for Azure VMs
- Discover unprotected assets and vulnerabilities by using Microsoft Defender External Attack Surface Management (EASM)

Implement activity and event collection in Microsoft Sentinel

- Create and connect workspaces in Microsoft Sentinel
- Assign roles in Microsoft Sentinel
- Implement and use content hub solutions
- Configure and use Microsoft data connectors for Azure resources
- Implement and configure syslog and Common Event Format (CEF) event collections
- Implement and configure collection of Windows Security events by using data collection rules, including Windows Event Forwarding (WEF)
- Create custom log tables in the workspace to store ingested data
- Implement automation rules and playbooks in Microsoft Sentinel
- Implement data retention in Microsoft Sentinel data stores
- Query Microsoft Purview Audit in Defender XDR

Implement Microsoft Security Copilot

- Configure workspaces for Security Copilot
- Manage permissions and roles in Security Copilot
- Enable and configure plugins
- Enable and configure Microsoft agents and Security Store agents

Study resources

We recommend that you train and get hands-on experience before you take the exam. We offer self-study options and classroom training as well as links to documentation, community sites, and videos.

Study guide for Exam SC-900: Microsoft Security, Compliance, and Identity Fundamentals

Purpose of this document

This study guide should help you understand what to expect on the exam and includes a summary of the topics the exam might cover and links to additional resources. The information and materials in this document should help you focus your studies as you prepare for the exam.

Expand table

Useful links	Description
Your Microsoft Learn profile	Connecting your certification profile to Microsoft Learn allows you to schedule and renew exams and share and print certificates.
Exam scoring and score reports	A score of 700 or greater is required to pass.
Exam sandbox	You can explore the exam environment by visiting our exam sandbox.
Request accommodations	If you use assistive devices, require extra time, or need modification to any part of the exam experience, you can request an accommodation.
Take a free Practice Assessment	Test your skills with practice questions to help you prepare for the exam.

Updates to the exam

Our exams are updated periodically to reflect skills that are required to perform a role. We have included two versions of the Skills Measured objectives depending on when you are taking the exam.

We always update the English language version of the exam first. Some exams are localized into other languages, and those are updated approximately eight weeks after the English version is updated. While Microsoft makes every effort to update localized versions as noted, there may be times when the localized versions of an exam are not updated on this schedule. Other available languages are listed in the **Schedule Exam** section of the **Exam Details** webpage. If the exam isn't

available in your preferred language, you can request an additional 30 minutes to complete the exam.

Note

The bullets that follow each of the skills measured are intended to illustrate how we are assessing that skill. Related topics may be covered in the exam.

Note

Most questions cover features that are general availability (GA). The exam may contain questions on Preview features if those features are commonly used.

Skills measured as of July 28, 2026

Audience profile

This exam is targeted to you, if you're looking to familiarize yourself with the fundamentals of security, compliance, and identity (SCI) across cloud-based and related Microsoft services.

If you have an interest in Microsoft SCI solutions, this exam is for you, whether you're a:

- Business stakeholder
- New or existing IT professional
- Student

You should be familiar with Microsoft Azure and Microsoft 365 and want to understand how Microsoft SCI solutions can span across these solution areas to provide a holistic and end-to-end solution.

Skills at a glance

- Describe the concepts of security, compliance, and identity (10–15%)
- Describe the capabilities of Microsoft Entra (25–30%)
- Describe the capabilities of Microsoft security solutions (35–40%)
- Describe the capabilities of Microsoft compliance solutions (20–25%)

Describe the concepts of security, compliance, and identity (10–15%)

Describe security and compliance concepts

- Describe the shared responsibility model
- Describe defense-in-depth
- Describe the Zero Trust model
- Describe encryption and hashing
- Describe Governance, Risk, and Compliance (GRC) concepts

Define identity concepts

- Define identity as the primary security perimeter
- Define authentication
- Define authorization
- Describe identity providers
- Describe the concept of directory services and Active Directory
- Describe the concept of federation

Describe the capabilities of Microsoft Entra (25–30%)

Describe function and identity types of Microsoft Entra ID

- Describe Microsoft Entra ID
- Describe types of identities, including agent ID
- Describe hybrid identity

Describe authentication capabilities of Microsoft Entra ID

- Describe the authentication methods
- Describe multifactor authentication (MFA)

- Describe password protection and management capabilities

Describe access management capabilities of Microsoft Entra ID

- Describe Microsoft Entra Conditional Access
- Describe Microsoft Entra roles and role-based access control (RBAC)

Describe identity protection and governance capabilities of Microsoft Entra

- Describe Microsoft Entra ID Governance
- Describe access reviews
- Describe the capabilities of Microsoft Entra Privileged Identity Management
- Describe Microsoft Entra ID Protection

Describe the capabilities of Microsoft security solutions (35–40%)

Describe core infrastructure security services in Azure

- Describe Azure DDoS Protection
- Describe Azure Firewall
- Describe Azure Web Application Firewall (WAF)
- Describe network segmentation with Azure virtual networks
- Describe network security groups (NSGs)
- Describe Azure Bastion
- Describe Azure Key Vault

Describe security management capabilities of Azure

- Describe Microsoft Defender for Cloud
- Describe Cloud Security Posture Management (CSPM)

- Describe how security policies, standards, and recommendations improve the cloud security posture
- Describe enhanced security features provided by cloud workload protection

Describe capabilities of Microsoft Sentinel

- Define the concepts of security information and event management (SIEM) and security orchestration automated response (SOAR)
- Describe threat detection and mitigation capabilities in Microsoft Sentinel

Describe threat protection with Microsoft Defender XDR

- Describe Microsoft Defender XDR services
- Describe Microsoft Defender for Office 365
- Describe Microsoft Defender for Endpoint
- Describe Microsoft Defender for Cloud Apps
- Describe Microsoft Defender for Identity
- Describe Microsoft Defender Vulnerability Management
- Describe Microsoft Defender Threat Intelligence (Defender TI)
- Describe the Microsoft Defender portal

Describe the capabilities of Microsoft compliance solutions (20–25%)

Describe Microsoft Service Trust Portal and privacy principles

- Describe the Service Trust Portal offerings
- Describe the privacy principles of Microsoft

Describe compliance management capabilities of Microsoft Purview

- Describe the Microsoft Purview portal
- Describe Compliance Manager

- Describe the uses and benefits of compliance score

Describe information protection, data lifecycle management, and data governance capabilities of Microsoft Purview

- Describe the data classification capabilities
- Describe the benefits of Content explorer and Activity explorer
- Describe sensitivity labels and sensitivity label policies
- Describe data loss prevention (DLP)
- Describe records management
- Describe retention policies, retention labels, and retention label policies

Describe insider risk, eDiscovery, and audit capabilities in Microsoft Purview

- Describe insider risk management
- Describe eDiscovery solutions in Microsoft Purview
- Describe audit solutions in Microsoft Purview

Study guide for the Applied Skills assessment lab: Get started with Azure management tasks

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Perform basic subscription tasks

- Manage and view Azure settings
- Add locks to resources
- Add tags to resources
- View subscription level settings

  Supporting module (s):
  - Describe Microsoft Azure resources management

Perform basic network services tasks

- View subnets and related resources
- Gather virtual network discovery
- View NSGs
- Assign an NSG

  Supporting module (s):
  - Describe Microsoft Azure resources management

Perform basic virtual machines tasks

- Configure basic virtual machine settings
- Attach a new disk
- Change the size of a virtual machine
- Configure the network interface
- Gather virtual machine inventory
- Start and stop a virtual machine

  Supporting module (s):
  - Describe Microsoft Azure resources management

Perform basic storage tasks

- Manage access keys
- Get connection information
- Create shared access signatures
- Configure file share settings
- Upload a file to Azure Files
- Create an Azure Blob Storage container
- Upload a file to an Azure Blob Storage container

  Supporting module (s):
  - Describe Microsoft Azure resources management

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Get started with classes, properties, and methods in C#

Article • 05/14/2025

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create classes, objects and types

- Choose between classes, objects, and types
- Create classes
- Create objects
- Use types
- Use namespaces

  Supporting module (s):
  - Get started with classes and objects

Work with properties

- Create properties
- Control access to properties
- Use different property types (nullable / default values)

  Supporting module (s):
  - Implement class properties and methods

Work with methods

- Create methods
- Use Method return options
- Control access to methods
- Overload methods

  Supporting module (s):
  - Implement class properties and methods

Call properties and methods

- Instantiate classes
- Use class properties
- Use class methods
- Use static classes
- Call methods and handle return values

  Supporting module (s):
  - Manage class implementations

Study guide for the Applied Skills assessment lab: Get started developing agents in Microsoft Foundry

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Deploy a model

- Select a specific model
- Configure the deployment type
- Configure Tokens per Minute Rate Limit

  Supporting module (s):
  - Get started with AI agent development on Azure

Create an agent

- Configure the agent name and model
- Configure the agent instructions
- Add tools
- Set agent parameters
- Save the agent

  Supporting module (s):
  - Develop AI agents with Microsoft Foundry and Visual Studio Code

Test the agent

- Add a starter prompt
- Message the agent

  Supporting module (s):

  - Develop AI agents with Microsoft Foundry and Visual Studio Code

---

Last updated on 05/28/2026

Study guide for the Applied Skills assessment lab: Get started with identities and access using Microsoft Entra

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Perform basic user management tasks

- Create a new user
- Add a license to a user
- Invite an external user
- Assign a role to the user
- Bulk import users

  Supporting module (s):
  - Get started with identity and access labs

Perform basic group management tasks

- Create a Microsoft 365 group
- Create a security group
- Add an existing user to a new group
- Add licenses, owners, and members to a group

  Supporting module (s):

- Get started with identity and access labs

Perform basic password protection tasks

- View password protection lockout settings, including duration and threshold
- View the custom banned password list and add custom banned passwords

  Supporting module (s):
  - Get started with identity and access labs

Perform basic self-service password reset (SSPR) tasks

- View SSPR properties for a specific group
- View SSPR authentication methods
- View SSPR registration
- View SSPR notifications

  Supporting module (s):
  - Get started with identity and access labs

Perform basic Microsoft Entra multifactor authentication tasks

- Enable or disable per-user MFA (legacy) settings
- View trusted IPs for MFA
- View account password protection lockout settings
- View additional cloud-based MFA settings

  Supporting module (s):
  - Get started with identity and access labs

Perform basic Conditional Access policy tasks

- Review a Conditional Access policy
- Perform What If analysis for a Conditional Access policy
- Enable or disable a Conditional Access policy

Supporting module (s):

- Get started with identity and access labs

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Get started with cloud security and monitoring tasks

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Perform basic cloud workload protection platform (CWPP) tasks

- Enable a Microsoft Defender for Cloud (CWPP) plan
- Review and download recommendations
- Review and download asset inventory
- Review a health report for a specific resource

  Supporting module (s):
  - Configure and manage threat protection by using Microsoft Defender for Cloud

Perform basic key management tasks

- Manage keys
- Manage secrets
- Authorize users to access keys
- Gather Azure Key Vault information

  Supporting module (s):
  - Configure and manage secrets in Azure Key Vault

Perform basic firewall configuration tasks

- Gather basic firewall information
- Associate a firewall policy to a firewall
- View firewall policies

  Supporting module (s):
  - Introduction to Azure Firewall

Perform basic Azure Monitor tasks

- Modify alert rules
- Assign roles to a Log Analytics workspace
- Modify action groups
- Modify Log Analytics workspace settings

  Supporting module (s):
  - Create and configure a Log Analytics workspace

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Configure secure access to your workloads using Azure networking

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create and configure virtual networks

- Create a virtual network
- Configure subnets
- Configure virtual network peering

  Supporting module (s):

  - Configure virtual networks
  - Configure Azure Virtual Network peering

Configure network routing

- Create and configure a route table
- Associate a route table to a subnet
- Create and configure an Azure NAT Gateway

  Supporting module (s):

  - Manage and control traffic flow in your Azure deployment with routes

Create DNS zones and configure DNS settings

- Create and configure a private DNS zone
- Create and configure DNS records
- Configure DNS settings on a virtual network

  Supporting module (s):
  - Configure Azure DNS

Create and configure network security groups (NSGs)

- Create an NSG
- Associate an NSG to a subnet or a network interface
- Create NSG security rules
- Create and use Application Security Groups (ASGs) in NSG security rules

  Supporting module (s):
  - Configure network security groups

Create and configure Azure Firewall

- Create an Azure Firewall
- Create and configure a public IP address
- Create and configure a firewall policy

  Supporting module (s):
  - Introduction to Azure Firewall

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Secure storage for Azure Files and Azure Blob Storage

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create and configure a storage account

- Configure the appropriate storage account performance (standard versus premium)
- Configure redundancy settings
- Configure secure transfer and TLS version
- Configure replication

  Supporting module (s):
  - Create an Azure Storage account

Create and configure Azure Blob Storage

- Create an Azure Blob Storage container
- Configure access level for Azure Blob Storage
- Configure the Azure Blob Storage tiers
- Configure lifecycle management
- Configure data protection for Azure Blob Storage

  Supporting module (s):

- Configure Azure Blob Storage

Create and configure Azure Files

- Create an Azure file share
- Configure performance tiers
- Configure data protection for Azure Files

  Supporting module (s):
  - Plan and implement security for storage

Configure encryption

- Configure encryption for data at rest, including Microsoft managed keys and customer managed keys
- Configure encryption for data in transit

  Supporting module (s):
  - Configure Azure Storage security

Configure networking for storage

- Create and configure private endpoints
- Create and configure service endpoints
- Configure Azure Storage account firewalls and virtual networks

  Supporting module (s):
  - Secure and isolate access to Azure resources by using network security groups and service endpoints

---

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Deploy and configure Azure Monitor

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create and configure a Log Analytics workspace

- Create a Log Analytics workspace
- Configure access to a Log Analytics workspace
- Configure data retention
- Configure Log Analytics health status alert

  Supporting module (s):
  - Create and configure a Log Analytics workspace

Configure monitoring for applications

- Create an Application Insights resource
- Configure data sampling rate
- Configure daily cap for Application Insights (non-workspace-based resources)
- Configure smart detection email notifications via alert rules and action groups
- Configure diagnostic logging

  Supporting module (s):

- Configure monitoring for applications

Configure monitoring for virtual machines (VMs)

- Deploy Azure Monitor Agent to a virtual machine
- Configure data collection rules, including Windows event logs, syslog, IIS logs, and application-specific logs
- Enable VM insights

  Supporting module (s):

  - Configure monitoring for virtual machines
  - Configure monitoring for virtual networks

Configure monitoring for virtual networks

- Create and configure an Azure Network Watcher connection monitor
- Create and configure a virtual network flow log
- Enable traffic analytics
- Configure access to virtual network flow logs

  Supporting module (s):
  - Configure monitoring for virtual networks

Configure alerts and responses

- Create an action group
- Create an alert rule
- Create an alert processing rule to suppress notifications during a specific time window
- Configure automated responses to alerts, including notifications and runbooks

  Supporting module (s):
  - Configure alerts and responses

Last updated on 06/16/2026

Study guide for the Applied Skills assessment lab: Administer Active Directory Domain Services

Article • 06/12/2024

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Deploy and manage AD DS domain controllers

- Deploy domain controllers
- Transfer a Flexible Single Master Operations (FSMO) role

  Supporting module(s):
  - Manage AD DS domain controllers and FSMO roles

Configure Active Directory topology

- Raise the functional level of a domain or forest
- Create a new site and map it to a subnet
- Move domain controllers between sites

Supporting module(s):

- Introduction to AD DS

Deploy and manage AD DS domain controllers

- Deploy domain controllers

- Transfer a Flexible Single Master Operations (FSMO) role

  Supporting module(s):
  - Manage AD DS domain controllers and FSMO roles

Create and manage AD DS objects

- Create a user account
- Perform bulk management tasks for user accounts
- Manage disabled users accounts
- Reset user passwords
- Implement a group Managed Service Account (gMSA)
- Create groups
- Add users to groups, including privileged groups and the Protected Users group
- Create and manage organizational units
- Recover items from the AD DS recycle bin

  Supporting module(s):

- Introduction to AD DS

Create and configure Group Policy Objects (GPOs) in AD DS

- Create and link a GPO
- Configure Group Policy settings
- Configure Group Policy scope and processing order

  Supporting module(s):

- Implement Group Policy Objects

Manage security in AD DS

- Delegate permissions in AD DS
- Configure the domain password policy

- Configure and apply a fined-grained password policy
- Configure auditing, including advanced audit policy
- Configure user rights assignment by using Group Policy

Supporting module(s):

- Implement Group Policy Objects
- Monitor and troubleshoot AD DS

Study guide for the Applied Skills assessment lab: Implement security through a pipeline using Azure DevOps

Article • 01/06/2025

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Configure secure access to pipeline resources

- Configure pipeline access to agent pools
- Configure pipeline access to secret variables in variable groups
- Configure pipeline access to secure files
- Configure pipeline access to service connections
- Configure pipeline access to environments
- Configure pipeline access to repositories

  Supporting module (s):
  - Configure secure access to pipeline resources

Configure and validate permissions

- Configure and validate user permissions to the pipeline
- Configure and validate pipeline permissions
- Configure and validate approval and branch checks

  Supporting module (s):

- Configure and validate permissions

Configure a project and repository structure to support secure pipelines

- Separate a project into another repository
- Separate a project into two projects

  Supporting module (s):
  - Configure a project and repository structure to support secure pipelines

Extend a pipeline to use multiple templates

- Create a nested template
- Rewrite the main deployment pipeline
- Configure the pipeline and the application to use tokenization
- Remove plain text secrets
- Restrict agent logging
- Identify and conditionally remove script tasks from templates

  Supporting module (s):
  - Extend a pipeline to use multiple templates

Manage identity for projects, pipelines, and agents

- Configure a Microsoft-hosted pool
- Configure agents for projects
- Configure agent identities
- Configure the scope of a service connection
- Convert to a workload identity

  Supporting module (s):
  - Manage identity for projects, pipelines, and agents

Study guide for the Applied Skills assessment lab: Deploy cloud-native apps using Azure Container Apps

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Configure a secure connection between an Azure Container Registry and Azure Container Apps

- Configure a managed identity
- Configure AcrPull permissions for the managed identity
- Configure private endpoints

  Supporting module (s):
  - Configure Azure Container Registry for container app deployments

Create and configure a container app in Azure Container Apps

- Create an Azure Container Apps environment
- Create a container app
- Add services to the Azure Container Apps environment
- Configure ingress for a container app
- Configure secrets and storage

  Supporting module (s):
  - Configure a container app in Azure Container Apps

Configure continuous integration by using Azure Pipelines

- Configure the Azure Container Apps Deploy task
- Configure secrets in Azure Key Vault
- Configure environment variables

  Supporting module (s):
  - Configure continuous deployment for container apps

Scale a deployed app in Azure Container Apps

- Configure HTTP scale rules
- Configure TCP scale rules

  Supporting module (s):
  - Scale and manage deployed container apps

Manage revisions in Azure Container Apps

- Set up a staging environment
- Choose a revision mode
- Create a new revision
- Configure traffic splitting

  Supporting module (s):
  - Scale and manage deployed container apps

Last updated on 06/16/2026

Study guide for the Applied Skills assessment lab: Automate Azure Load Testing by using GitHub Actions

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Prepare the GitHub and Azure environments

- Create an identity, including user-assigned managed identity or a service principal
- Configure authorization for the identity
- Connect GitHub to the Azure subscription
- Configure an Azure App Service deployment slot

  Supporting module (s):
  - Implement Azure Load Testing

Configure GitHub Actions to deploy an app to Azure App Service

- Create and configure a deployment workflow
- Implement deployment from a dev branch to Azure App Service

  Supporting module (s):

  - Implement GitHub Actions for Azure
  - [Implement GitHub Actions](https://learn.microsoft.com/training/modules/implement-github-actions/

Create and configure load tests

- Create an Azure Load Testing resource
- Create a load test, including URL-based and JMeter
- Configure pass/fail criteria for a load test

  Supporting module (s):
  - Implement Azure Load Testing

Configure GitHub Actions to run load tests

- Create and configure a load testing workflow
- Upload artifacts

  Supporting module (s):
  - Implement Azure Load Testing

Manage pull requests by using GitHub Actions

- Automate pull request approvals
- Implement triggers and dependencies in GitHub workflows

  Supporting module (s):
  - Implement GitHub Actions

Last updated on 06/16/2026

Study guide for the Applied Skills assessment lab: Accelerate app development by using GitHub Copilot

Article • 05/14/2025

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Explain code by using GitHub Copilot Chat

- Explain the project and specific project files by using GitHub Copilot Chat
- Explain project dependencies by using GitHub Copilot Chat
- Explain the purpose of selected lines of code by using GitHub Copilot Inline Chat
- Configure data retention

  Supporting module (s):
  - Generate documentation using GitHub Copilot tools

Document code by using GitHub Copilot tools

- Generate documentation of selected code or workspace by using GitHub Copilot
- Generate pull request summaries by using GitHub Copilot

  Supporting module (s):
  - Generate documentation using GitHub Copilot tools

Develop features by using GitHub Copilot tools

- Create a new feature by using GitHub Copilot Inline Chat

- Create a new code block by using GitHub Copilot Inline Chat
- Accept, reject, or partially accept code completion suggestions by using GitHub Copilot
- Populate data structures by using GitHub Copilot
- Create regular expressions to validate data patterns by using GitHub Copilot Inline Chat

  Supporting module (s):
  - Develop code features using GitHub Copilot tools

Develop unit tests by using GitHub Copilot tools

- Create a set of unit tests based on a specific method by using GitHub Copilot Inline Chat
- Accept, reject, or partially accept unit test suggestions generated by GitHub Copilot Inline Chat
- Create a unit test based on a specific condition by using GitHub Copilot
- Generate test data by using GitHub Copilot

  Supporting module (s):
  - Develop unit tests using GitHub Copilot tools

Refactor, debug, and improve code sections by using GitHub Copilot tools

- Refactor or simplify a block of code by using GitHub Copilot Chat
- Generate suggestions to fix a bug by using GitHub Copilot Chat
- Accept, reject, or partially accept bug fix suggestions generated by GitHub Copilot Inline Chat
- Implement specified improvements in code by using GitHub Copilot

  Supporting module (s):
  - Implement code improvements using GitHub Copilot tools

Study guide for the Applied Skills assessment lab: Resolve GitHub Issues by using GitHub Copilot

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create a GitHub Issue

- Create a new issue
- Set a label for the issue

  Supporting module (s):

  - Introduction to GitHub
  - Resolve issues using GitHub Copilot Agent

Investigate an issue by using GitHub Copilot

- Locate and assign a specific issue in GitHub
- Investigate the issue by using GitHub Copilot Ask mode
- Document the results of the investigation

  Supporting module (s):
  - Resolve issues using GitHub Copilot Agent

Resolve an issue by using GitHub Copilot Agent mode

- Resolve an injection issue

- Resolve a logging issue
- Resolve an error handling issue
- Resolve a file path issue
- Resolve a package vulnerability issue
- Build and test the application

  Supporting module (s):
  - Resolve issues using GitHub Copilot Agent

Close a GitHub Issue

- Commit changes
- Open a pull request
- Assign a pull request
- Close issue

  Supporting module (s):

  - Introduction to GitHub
  - Resolve issues using GitHub Copilot Agent

Last updated on 05/28/2026

Study guide for the Applied Skills assessment lab: Manage GitHub secret scanning by using GitHub Copilot

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Configure secret scanning and review security alerts

- Enable secret scanning and push protection
- Review alert details
- Dismiss a security alert

  Supporting module (s):
  - Resolve GitHub Secret Scanning alerts using GitHub Copilot Agent

Remediate security alerts by using GitHub Copilot in VS Code

- Analyze the security risk by using GitHub Copilot in VS Code
- Replace a hard-coded secret in the repository by using a secure configuration pattern
- Replace a hard-coded secret in the codebase by using GitHub Copilot in VS Code
- Validate the updated code by building the application locally

  Supporting module (s):
  - Resolve GitHub Secret Scanning alerts using GitHub Copilot Agent

Close secret scanning alerts after pushing changes to GitHub

- Commit the remediated changes by using GitHub Copilot, and push them to the GitHub repository
- Create a pull request to remediate a security alert by using GitHub Copilot in VS Code

  Supporting module (s):
  - Resolve GitHub Secret Scanning alerts using GitHub Copilot Agent

Study guide for the Applied Skills assessment lab: Migrate SQL Server workloads to Azure SQL Database

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Assess and prepare databases for migration

- Install and run Azure SQL Migration extension for Azure Data Studio
- Identify and resolve issues that will block migration
- Identify and resolve compatibility issues
- Choose the correct purchasing model for an Azure SQL Database based on requirements

  Supporting module (s):
  - Assess SQL Server databases for migration to Azure SQL

Provision and configure an Azure SQL Database

- Specify the database name
- Create a SQL logical server
- Configure compute and storage
- Select a backup storage redundancy option
- Configure a private endpoint
- Select database collation

- Configure a Microsoft Entra ID administrator

  Supporting module (s):
  - Deploy PaaS solutions with Azure SQL

Migrate a database to an Azure SQL Database

- Migrate a database
- Migrate set of tables

  Supporting module (s):
  - Migrate SQL Server workloads to Azure SQL Database

Configure disaster recovery

- Configure active geo-replication
- Select the correct SQL logical server
- Set up user access to the secondary database
- Failover to a different region

  Supporting module (s):
  - Perform post-migration tasks on Azure SQL

Perform post-migration configuration

- Enable long-term backup support
- Configure health alerts
- Create alert rules for space used and CPU
- Enable and configure Azure SQL Auditing

  Supporting module (s):
  - Perform post-migration tasks on Azure SQL

Migrate instance-level dependencies

- Migrate users
- Migrate logins to contained database users

Supporting module (s):

- Perform post-migration tasks on Azure SQL

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Build a natural language processing solution with Azure AI Language

> ⚠ **Warning**
>
> This Applied Skills assessment has been retired. Explore other Applied Skills to keep building your skills.

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Deploy a language resource and use prebuilt models

- Create a language resource that includes custom features
- Select an appropriate pre-built model
- Specify the endpoint

  Supporting module (s):
  - Analyze text with Azure AI Language

Create a custom text classification solution

- Create a new text classification project
- Upload training data and a JSON file that defines labels
- Deploy a text classification solution and connect it to an existing application

  Supporting module (s):

- Create a custom text classification solution

Create a custom Named Entity Recognition (NER) solution

- Create a new NER project
- Upload training data and label files
- Deploy an NER solution and connect it to an existing application

  Supporting module (s):
  - Create a custom named entity extraction solution

Create a conversational language understanding (CLU) solution

- Import a conversational language understanding project
- Define a custom data split
- Deploy a conversational language understanding solution and connect it to an existing application

  Supporting module (s):
  - Build a conversational language understanding model

Create a question answering solution

- Create a question answering project
- Upload a source file
- Deploy a question answering solution and connect it to an existing application

  Supporting module (s):
  - Build a question answering solution

Last updated on 06/30/2026

Study guide for the Applied Skills assessment lab: Implement a Real-Time Intelligence solution with Microsoft Fabric

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Prepare a real-time analytics environment

- Create a KQL database
- Create lookup tables
- Enable data mirroring in OneLake
- Create an Eventhouse and add a KQL database

  Supporting module (s):
  - Get started with Real-Time Intelligence in Microsoft Fabric

Create and load data from external sources

- Load data from a storage account
- Create an external table
- Validate that data sources are loaded correctly by using a row count, a filtered count, and a group by count

  Supporting module (s):

  - Use real time eventstreams in Microsoft Fabric

- Query data in a KQL database in Microsoft Fabric

Load and process streaming data by using Eventstream

- Connect a streaming dataset to an Eventstream
- Load data directly
- Configure event processing
- Load data by using windowing
- Send data to a KQL database

  Supporting module (s):
  - Use Eventstream in Microsoft Fabric

Explore the data

- Convert SQL to KQL
- Query data for min/max, median, and summary statistics
- Visualize data by using the render operator, including bar, line, column, and scatter charts
- Perform row-based calculations
- Create relationships between tables
- Process free text data by using the parse operator

  Supporting module (s):
  - Query data in a KQL database in Microsoft Fabric

Manipulate data

- Change data types by using a table variable
- Group or aggregate data by using the top-nested operator
- Perform data cleansing processes on the data, including time-series analysis (make-series, series-fill-*, series-decompose-*, series-fit-*)
- Create an update policy

- Create a materialized view
- Create a user-defined stored function

  Supporting module (s):
  - Get started with Real-Time Intelligence in Microsoft Fabric

---

Study guide for the Applied Skills assessment lab: Implement a data warehouse in Microsoft Fabric

> ⚠ **Warning**
>
> This Applied Skills assessment has been retired. Explore other Applied Skills to keep building your skills.

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create a data warehouse

- Sign up for a Microsoft Fabric trial
- Create a workspace and assign the workspace to a Fabric capacity
- Provision a data warehouse
- Set data warehouse properties

  Supporting module (s):
  - Get started with data warehouses in Microsoft Fabric

Load data

- Load data by using a data pipeline
- Load data by using Dataflows Gen2
- Load data by using a cross-warehouse query

- Load data by using the COPY command

  Supporting module (s):
  - Load data into a Microsoft Fabric data warehouse

Transform data

- Choose columns
- Customize columns
- Transform rows, including filtering and group by
- Clean data
- Denormalize data

  Supporting module (s):
  - Load data into a Microsoft Fabric data warehouse

Model a star schema

- Create fact tables
- Create dimension tables and slowly changing dimensions
- Create relationships

  Supporting module (s):
  - Load data into a Microsoft Fabric data warehouse

Query and modify data

- Create views
- Create stored procedures
- Create functions

  Supporting module (s):
  - Query a data warehouse in Microsoft Fabric

Manage security

- Grant access by using workspace roles

- Configure object-level permissions
- Configure dynamic data masking rules
- Configure column-level security
- Configure row-level security

  Supporting module (s):
  - Get started with data warehouses in Microsoft Fabric

Last updated on 06/30/2026

Study guide for the Applied Skills assessment lab: Build AI-powered solutions by using Microsoft Azure Database for PostgreSQL

Article • 09/20/2024

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Configure an Azure Database for PostgreSQL environment

- Import a sample database
- Connect to the database
- Configure the Azure OpenAI Service extension
- Create an Azure OpenAI deployment

  Supporting module (s):
  - Get started with generative AI in Azure Database for PostgreSQL

Generate document embeddings

- Create SQL tables for embeddings
- Choose an appropriate Azure OpenAI model to generate embeddings
- Generate embeddings from preexisting text
- Create a vector index on embeddings

  Supporting module (s):

- Enable semantic search in Azure Database for PostgreSQL

Implement semantic search

- Convert a search string into a vector
- Query the vector
- Create a semantic search function

  Supporting module (s):
  - Enable semantic search in Azure Database for PostgreSQL

Apply RAG

- Define a pipeline
- Retrieve data from the database based on user input
- Augment user input with newly generated results
- Generate output based on aggregated data

  Supporting module (s):
  - Enable semantic search in Azure Database for PostgreSQL

Transform and analyze natural language

- Generate extractive summaries for data
- Generate a batch process to persist summary data in the database
- Detect language
- Translate text
- Perform a sentiment analysis on the dataset

  Supporting module (s):
  - Perform sentiment analysis and opinion mining with Azure Database for PostgreSQL

Study guide for the Applied Skills assessment lab: Develop data-driven applications by using Microsoft Azure SQL Database

Article • 10/22/2024

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Develop an Azure SQL Database

- Create and configure an Azure SQL Database
- Import a schema
- Modify a schema
- Automate publishing of a database
- Invoke an automation

  Supporting module (s):
  - Provision an Azure SQL database to store application data

Develop a data API

- Create a Data API builder configuration file
- Configure a database connection in a static web app
- Deploy a configuration file to a static web app
- Validate API access

Supporting module (s):

- Provision an Azure SQL database to store application data

Enable a read-only Azure SQL Database

- Provision a secondary replica
- Configure application intent

Supporting module (s):

- Provision an Azure SQL database to store application data

Import data by using an external REST endpoint

- Create an object that runs sp_invoke_external_rest_endpoint
- Convert JSON data to tabular format
- Execute a stored procedure to import data

Supporting module (s):

- Get started with Transact-SQL programming
- Create stored procedures and user-defined functions

Export data by using an Azure function

- Enable change tracking
- Incorporate an Azure SQL trigger in an existing Azure function
- Execute an Azure function to export data

Supporting module (s):

- [- Create stored procedures and user-defined functions

Secure an Azure SQL database

- Create a user for a managed identity
- Assign database permissions
- Configure firewall settings

Supporting module (s):

- Secure your Azure SQL Database

Study guide for the Applied Skills assessment lab: Configure and migrate to Azure Database for PostgreSQL

06/24/2025

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Migrate a database to Azure Database for PostgreSQL

- Deploy a server
- Create a database
- Migrate a local database to Azure Database for PostgreSQL

  Supporting module (s):
  - Migrate to Azure Database for PostgreSQL flexible server

Configure high availability, replication, and disaster recovery

- Configure high availability
- Configure cross-region replication
- Configure disaster recovery

  Supporting module (s):
  - Understand write-ahead logging

Configure and optimize database performance

- Run a workload

- Configure wait statistics
- Configure Query Store
- Create indexes
- Identify poorly performing queries
- Optimize query performance

  Supporting module (s):

  - Tune queries in Azure Database for PostgreSQL
  - Understand PostgreSQL query processing

Configure identity and access

- Configure server connectivity
- Configure Microsoft Entra authentication
- Isolate network traffic by using Private Link
- Manage firewall rules

  Supporting module (s):
  - Secure Azure Database for PostgreSQL

Study guide for the Applied Skills assessment lab: Build a generative AI chat app

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Prepare and deploy a model in Microsoft Foundry

- Create a Microsoft Foundry project
- Select an appropriate model based on benchmarks and quality metrics
- Deploy a model
- Evaluate model performance
- Configure guardrails and safety controls

  Supporting module (s):
  - Get started with AI agent development on Azure

Create a chat app by using the Microsoft Foundry SDK

- Set up the development environment
- Write code to initialize the Microsoft Foundry client
- Integrate chat functionality
- Run and debug the app

  Supporting module (s):
  - Develop an AI agent with Microsoft Foundry Agent Service

Implement chat history

- Create a chat history object
- Write code to add user and agent messages to the object
- Write code to add chat history to the conversation context

  Supporting module (s):
  - Develop an AI agent with Microsoft Foundry Agent Service

Last updated on 01/20/2026

Study guide for the Applied Skills assessment lab: Integrate model context protocol tools with agents in Microsoft Foundry

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Select and deploy a model

- Select an appropriate model
- Deploy a model
- Configure model settings

  Supporting module (s):
  - Get started with AI agent development on Azure

Create and configure an agent

- Create an agent
- Configure and optimize instructions
- Validate agent instructions

  Supporting module (s):
  - Develop AI agents with Microsoft Foundry and Visual Studio Code

Connect an agent to an MCP server by using an MCP tool

- Attach an MCP tool
- Configure MCP tool settings
- Validate MCP tool calls

  Supporting module (s):
  - Integrate MCP tools with Azure AI agents

Monitor the agent and MCP tool usage

- Connect an agent to Application Insights
- Create and run an evaluation

  Supporting module (s):
  - Monitor your generative AI application

Last updated on 05/28/2026

Study guide for the Applied Skills assessment lab: Create agentic workflows by using Microsoft Foundry

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Select and deploy a model

- Select an appropriate model
- Deploy a model
- Configure model settings

  Supporting module (s):
  - Develop AI agents with Microsoft Foundry and Visual Studio Code

Create and optimize workflows

- Create a workflow
- Invoke an agent
- Configure data transformations
- Configure user interactions
- Configure flow

  Supporting module (s):
  - Build agent-driven workflows using Microsoft Foundry

Create and configure agents

- Create an agent
- Configure agent parameters
- Specify JSON schema
- Configure and optimize agent instructions

  Supporting module (s):
  - Build agent-driven workflows using Microsoft Foundry

Test, deploy, and maintain workflows

- Test a workflow
- Deploy a workflow
- Add notes and descriptions

  Supporting module (s):
  - Build agent-driven workflows using Microsoft Foundry

Last updated on 06/29/2026

Study guide for the Applied Skills assessment lab: Prepare security and compliance to support Microsoft 365 Copilot

> ⚠ **Warning**
>
> This Applied Skills assessment has been retired. Explore other Applied Skills to keep building your skills.

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Prepare your Microsoft 365 environment to support Microsoft 365 Copilot

- Configure Copilot-related settings in Microsoft Defender for Office 365, including preset security policies and analytics
- Configure Copilot-related settings in Microsoft Defender for Cloud Apps, including OAuth policies, file monitoring, information protection, and app access
- Configure Copilot access to Microsoft Graph connectors and plug-ins
- Select an appropriate Microsoft 365 Apps channel
- Configure tenant-level settings for Copilot for Office 365, including Microsoft Edge browser settings and unified audit log, and enable Microsoft Copilot

  Supporting module (s):

- [Implement threat protection by using Microsoft Defender for Office 365]https://learn.microsoft.com/training/modules/implement-threat-protection-use-microsoft-defender-office-365/)

Configure identity governance to support Microsoft 365 Copilot

- Configure security defaults
- Create and configure Conditional Access policies to support Microsoft 365 Copilot
- Configure access to Copilot, including users, groups, privileged access, and access reviews

  Supporting module (s):
  - Manage secure user access in Microsoft 365

Configure device management to support Microsoft 365 Copilot

- Create and manage configuration profiles for endpoint security to support Microsoft 365 Copilot
- Create and manage compliance policies for Microsoft Intune to support Microsoft 365 Copilot
- Configure endpoint protection policies for Microsoft Defender for Endpoint to support Microsoft 365 Copilot
- Configure app protection and app configuration policies in Intune to support Microsoft Defender for Endpoint to support Microsoft 365 Copilot
- Configure security baselines in Intune to support Microsoft Defender for Endpoint to support Microsoft 365 Copilot

  Supporting module (s):
  - Implement endpoint protection by using Microsoft Defender for Endpoint

Configure and manage compliance settings for Microsoft 365 Copilot

- Configure data retention to govern Microsoft 365 Copilot
- Configure and manage sensitive data, including sensitivity labels, sensitivity policies, and sensitivity information types
- Apply sensitivity labels to Microsoft 365 Groups and SharePoint sites

- Manage Microsoft Word export features

  Supporting module (s):

  - Explore retention in Microsoft 365
  - Implement Microsoft Purview Data Loss Prevention
  - Implement sensitivity labels

Last updated on 06/30/2026

Study guide for the Applied Skills assessment lab: Extend Microsoft 365 Copilot with declarative agents by using Visual Studio Code

> ⚠ **Warning**
>
> This Applied Skills assessment has been retired. Explore other Applied Skills to keep building your skills.

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Configure manifests

- Configure an app manifest
- Configure an agent manifest
- Configure instructions
- Configure conversation starters
- Configure localization

  Supporting module (s):
  - Build your first declarative agent for Microsoft 365 Copilot by using Visual Studio Code

Configure agent capabilities and knowledge

- Configure a connection to SharePoint

- Enable web search
- Configure web scoping
- Enable code interpreter
- Enable image generation
- Configure a Microsoft Graph connector ID

  Supporting module (s):
  - Add custom knowledge to declarative agents using Microsoft Graph connectors and Visual Studio Code

Create and configure an API plugin

- Create an API plugin definition
- Define API plugin functions
- Define API plugin runtimes
- Connect an API plugin to a declarative agent
- Create OpenAPI specific
- Update an OpenAPI spec
- Implement confirmation prompts

  Supporting module (s):
  - Build your first action for declarative agents with API plugin by using Visual Studio Code

Configure authentication for an API plugin

- Integrate with an anonymous API
- Integrate with an API using single sign-on (SSO)
- Integrate with an API using an API key
- Integrate with an API using OAuth 2.0

  Supporting module (s):

- Authenticate your API plugin for declarative agents with secured APIs

Implement adaptive cards

- Configure adaptive card properties (title, description, URL, label)
- Develop an adaptive card template
- Troubleshoot an adaptive card
- Add API plugin response by using an adaptive card template

  Supporting module (s):
  - Use Adaptive Cards to show data in API plugins for declarative agents

Publish agents to Microsoft 365 Copilot

- Build an app package
- Deploy an app package
- Update an app package

  Supporting module (s):
  - [Manage Microsoft 365 Copilot extensibility]https://learn.microsoft.com/training/modules/manage-microsoft-365-copilot-extensibility/)

Last updated on 04/15/2026

Study guide for the Applied Skills assessment lab: Secure Azure services and workloads with Microsoft Defender for Cloud regulatory compliance controls

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Configure Microsoft Defender for Cloud

- Enable Defender CSPM plan in Microsoft Defender for Cloud
- Install agents on an Azure VM
- Configure email notifications

  Supporting module (s):
  - Set up Microsoft Defender for Cloud

Implement just-in-time (JIT) virtual machine (VM) access

- Create an NSG
- Associate an NSG to a network interface
- Enable just-in-time VM access
- Configure just-in-time VM access

  Supporting module (s):
  - Filter network traffic with a network security group using the Azure portal

Mitigate network security risks

- Enable a firewall on an Azure Key Vault
- Configure security on a network security group

  Supporting module (s):
  - Configure Azure Key Vault networking settings

Mitigate data protection risks

- Enable Azure Disk Encryption (ADE)
- Configure purge protection on Azure Key Vault

  Supporting module (s):
  - Configure Azure Key Vault networking settings

Mitigate endpoint security risks

- Enable a private endpoint
- Disable public access
- Add the Microsoft Defender for Endpoint extension to an Azure VM

  Supporting module (s):
  - Connect an Azure SQL server using an Azure Private Endpoint using the Azure portal

Mitigate posture and vulnerability management risks

- Configure auditing for an Azure VM
- Configure a Machine Configuration extension for an Azure VM
- Configure vulnerability assessment for an Azure VM

  Supporting module (s):
  - Configure and integrate a Log Analytics agent and workspace in Defender for Cloud

Study guide for the Applied Skills assessment lab: Implement information protection and data loss prevention by using Microsoft Purview

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create a custom sensitive information type

- Create a custom sensitive information type that uses a regular expression
- Create a custom sensitive information type that uses a keyword list or keyword dictionary
- Create a custom sensitive information type from a built-in sensitive information type
- Create a document fingerprint classifier

  Supporting module (s):
  - Create and manage sensitive information types

Create and publish a sensitivity label

- Create sensitivity labels
- Create a sublabel
- Publish a sensitivity label
- Enable sensitivity labels for files in SharePoint and OneDrive
- Enable co-authoring for files encrypted with sensitivity labels

Supporting module (s):

- Create and configure sensitivity labels with Microsoft Purview

Create and assign an auto-labeling policy

- Choose or create sublabel for auto-labeling policy
- Choose location to apply the auto-labeling policy
- Create rule for auto-labeling policy
- Assign a sensitivity label by using an auto-labeling policy

  Supporting module (s):

  - Create and configure sensitivity labels with Microsoft Purview

Create a data loss prevention (DLP) policy

- Choose policy locations
- Create an advanced DLP rule
- Configure a policy mode

  Supporting module (s):

  - Prevent data loss in Microsoft Purview

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Defend against cyberthreats with Microsoft Defender XDR

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Configure a Microsoft Defender XDR environment

- Configure Microsoft Defender XDR settings
- Configure advanced features in Microsoft Defender for Endpoint
- Configure security policies in Microsoft Defender for Endpoint
- Configure deception rules

  Supporting module (s):
  - Mitigate incidents using Microsoft Defender

Manage devices by using Microsoft Defender for Endpoint

- Onboard devices in Microsoft Defender for Endpoint
- Create a device group
- Set automation level
- Set security for access

  Supporting module (s):
  - Deploy the Microsoft Defender for Endpoint environment

Use Microsoft Defender XDR to manage incidents

- Simulate an endpoint attack
- Assign an incident to another user
- Perform actions on users
- Add custom indicators

  Supporting module (s):
  - Mitigate incidents using Microsoft Defender

Manage investigations on an endpoint

- Perform live response actions on an endpoint
- Collect an investigation package
- Isolate an endpoint
- Analyze a device timeline

  Supporting module (s):
  - Perform device investigations in Microsoft Defender for Endpoint

Perform Advanced Hunting with KQL in Microsoft Defender XDR to detect unique threats

- Create KQL queries
- Create custom detection rules
- Share custom detection rules
- Validate custom detection rules

  Supporting module (s):
  - Mitigate incidents using Microsoft Defender

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Implement retention, eDiscovery, and Communication Compliance in Microsoft Purview

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create and configure retention labels

- Create and manage retention labels for Microsoft Purview Data Lifecycle Management
- Create and manage retention labels for Microsoft Purview Records Management
- Configure and manage event-based retention

  Supporting module (s):
  - Manage the data lifecycle in Microsoft Purview

Apply retention labels

- Publish retention labels
- Auto-apply retention labels
- Create an adaptive scope

  Supporting module (s):
  - Implement and manage retention with Microsoft Purview

Create and manage retention policies

- Scope retention policies by using administrative units
- Specify a location to apply the retention policy
- Configure retention policy settings

  Supporting module (s):
  - Implement and manage retention with Microsoft Purview

Create and configure eDiscovery cases

- Create an eDiscovery case
- Add a custodian
- Add a data location
- Create a collection
- Create a review set
- Configure eDiscovery case settings

  Supporting module (s):
  - Create and manage eDiscovery cases

Implement Microsoft Purview Communication Compliance

- Delegate permissions for Microsoft Purview Communication Compliance
- Create Microsoft Purview Communication Compliance policies
- Configure Microsoft Purview Communication Compliance settings

  Supporting module (s):
  - Detect and address communication risks with Microsoft Purview Communication Compliance

Monitor and investigate data and activities by using eDiscovery search

- Add users to role groups for eDiscovery
- Create an eDiscovery search
- Export eDiscovery search results

- Download eDiscovery search results

  Supporting module (s):

  - Search for content with Microsoft Purview eDiscovery

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Secure AI solutions in the cloud

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Configure security for AI services in Microsoft Defender for Cloud

- Configure Defender Cloud Security Posture Management (CSPM) for AI services
- Configure cloud workload protection plans for an AI solution
- Implement security policies for AI services

  Supporting module (s):
  - Protect AI workloads with Microsoft Defender for Cloud

Configure model guardrails and controls in Microsoft Foundry

- Configure content filters
- Create blocklists to prevent specific items
- Validate content filters

  Supporting module (s):
  - Configure and manage guardrails in Microsoft Foundry

Configure security settings for an Microsoft Foundry environment

- Manage users and roles in Microsoft Foundry
- Set up a connected resource in Microsoft Foundry

- Configure diagnostic settings for Microsoft Foundry

  Supporting module (s):
  - Secure Microsoft Foundry environments

Last updated on 02/18/2026

Study guide for the Applied Skills assessment lab: Enhance agents with autonomous capabilities

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create an agent and add knowledge

- Create an agent
- Configure agent instructions
- Add knowledge

  Supporting module (s):
  - Build an initial agent with Microsoft Copilot Studio

Create and configure agent flows as tools

- Create an agent flow
- Configure alerts and notifications for the autonomous actions
- Test agent flow execution
- Add an agent flow as a tool

  Supporting module (s):
  - Make your agent autonomous in Copilot Studio - online workshop

Create and configure event triggers for autonomous behavior

- Add and configure event triggers to an agent, such as Dataverse, Outlook, SharePoint, and Microsoft Teams
- Schedule an agent to run by using a recurrence trigger
- Configure payload instructions

  Supporting module (s):
  - Make your agent autonomous in Copilot Studio - online workshop

Configure error handling and human interaction

- Implement error handling in the agent flow
- Configure human-in-the-loop interaction by using message nodes, question nodes, or Adaptive Cards

  Supporting module (s):
  - Make your agent autonomous in Copilot Studio - online workshop

Study guide for the Applied Skills assessment lab: Streamline business workflows with AI chat

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Streamline web productivity tasks by using Microsoft 365 Copilot

- Research competitors
- Translate a webpage
- Summarize content

  Supporting module (s):
  - Unlock productivity and unleash creativity with AI powered chat

Draft and refine documents by using Copilot in Microsoft Word

- Draft content from other documents
- Enhance tone in text
- Extract keywords from a document
- Summarize a document

  Supporting module (s):
  - Draft impactful documents using AI

Draft presentations by using Copilot in Microsoft PowerPoint

- Create a slide
- Generate an image based on a slide
- Summarize a presentation

  Supporting module (s):
  - Build effective presentations with AI

Manage emails and responses by using Copilot in Microsoft Outlook

- Summarize an email thread
- Draft a response to an email
- Create a meeting agenda from an email
- Enhance tone in an email

  Supporting module (s):
  - From inbox to impact: Improve your email workflows with AI

Explore data by using Copilot in Microsoft Excel

- Interpret data
- Generate predictions from data
- Summarize data

  Supporting module (s):
  - Uncover new data insights with AI

Last updated on 04/02/2026

Study guide for the Applied Skills assessment lab: Generate reports with AI research agents

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Define scope, identify sources, and create an initial draft for a report by using Researcher

- Provide Researcher the scope, objectives, and audience for a report
- Instruct Researcher to include specific resources
- Discover relevant resources by using Researcher
- Prompt Researcher to create an initial report draft

  Supporting module (s):
  - Explore prebuilt Microsoft 365 Copilot agents

Refine a report by using Researcher

- Respond to requests for clarification from Researcher
- Organize a report into a specific structure by using Researcher
- Format a report by using Researcher
- Revise content for tone, readability, and clarity by using Researcher

  Supporting module (s):
  - Explore prebuilt Microsoft 365 Copilot agents

Finalize a report by using Researcher

- Cite sources and add references by using Researcher
- Generate executive summaries and key takeaways by using Researcher
- Check facts and validate accuracy by using Researcher
- Publish or share the report

  Supporting module (s):
  - Explore prebuilt Microsoft 365 Copilot agents

Last updated on 11/10/2025

Study guide for the Applied Skills assessment lab: Create and manage canvas apps with Microsoft Power Apps

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create a canvas app from scratch

- Create a blank canvas app
- Choose an appropriate format
- Configure app settings

  Supporting module (s):

  - Get started with Power Apps canvas apps
  - Customize a canvas app in Power Apps

Connect a canvas app to a data source

- Choose the appropriate data source type
- Add a new connection

  Supporting module (s):
  - Work with external data in a Power Apps canvas app

Configure a gallery

- Add a gallery control

- Connect a gallery to a data source
- Configure fields
- Configure navigation

  Supporting module (s):
  - Customize a canvas app in Power Apps

Configure a details screen

- Add a detail form
- Configure the layout of a form
- Select fields and configure display form controls
- Configure navigation

  Supporting module (s):

  - Customize a canvas app in Power Apps
  - Write data in a Power Apps canvas app

Configure an input screen

- Add an input form
- Select fields and configure edit form controls
- Configure field validation
- Configure submit and cancel options
- Configure validation

  Supporting module (s):
  - Write data in a Power Apps canvas app

Save and publish a canvas app

- Save a canvas app
- Publish a canvas app

Supporting module (s):

- Publish, share, and maintain a canvas app

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Create and manage automated processes by using Power Automate

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create triggers

- Design a cloud flow by using a template
- Select an appropriate type of trigger
- Upload a data source
- Create a recurrence trigger
- Create an automated trigger

  Supporting module (s):

  - Build approval flows with Power Automate
  - Get started with Power Automate

Create and configure actions for notifications

- Create appropriate actions
- Configure actions

  Supporting module (s):

- Get started with Power Automate

Implement conditional logic

- Configure conditions on when a trigger should run
- Configure conditions on when actions should run
- Configure run-after settings for an action
- Run a test execution for a cloud flow

  Supporting module (s):
  - Integrate with cloud flows - Online workshop

Last updated on 06/12/2026

Study guide for the Applied Skills assessment lab: Create and manage model-driven apps with Power Apps and Dataverse

Purpose of this document

> ⚠ **Warning**
>
> This Applied Skills assessment has been retired. Explore other Applied Skills to keep building your skills.

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Create and configure Dataverse tables

- Create a Dataverse table
- Configure security roles for a table
- Add a lookup column
- Create columns

  Supporting module (s):
  - Create tables in Dataverse

Modify a Dataverse solution

- Add an existing table to a solution
- Create components in a solution
- Export a solution

Supporting module (s):

- Manage solutions in Power Apps and Power Automate

Modify Dataverse forms

- Add columns and configure column display properties
- Configure form structure with tabs and sections
- Add a Timeline control
- Add a read-only Subgrid component
- Configure access to forms

Supporting module (s):

- Configure forms, charts, and dashboards in model-driven apps

Modify Dataverse views

- Add columns to a view
- Set sort order in a view
- Modify filters in a view

Supporting module (s):

- Configure forms, charts, and dashboards in model-driven apps

Configure a model-driven app

- Add a table to the app
- Configure app navigation
- Manage available forms and views

Supporting module (s):

- Get started with model-driven apps in Power Apps

Last updated on 06/30/2026

Study guide for the Applied Skills assessment lab: Create agents in Microsoft Copilot Studio

> ⚠ **Warning**
>
> This credential will retire on June 30, 2026. You will no longer be able to earn this credential after this date.

Purpose of this document

This study guide provides a summary of the topics covered in the assessment lab, along with additional resources to help you prepare. Note that the learning path on the credential details page may include more modules than the "Tasks performed" to provide a cohesive learning experience.

Tasks at a glance

Build an initial agent

- Create and name a new agent
- Add a description
- Configure generative AI instructions

  Supporting module (s):
  - Build an initial agent with Microsoft Copilot Studio

Manage topics and trigger phrases

- Delete sample topics
- Disable system topics
- Create topics
- Create trigger phrases

Supporting module (s):

- Manage topics in Microsoft Copilot Studio

Configure nodes

- Add a **Send a message** node
- Add an **Ask a question** node
- Add an **Ask with Adaptive Card** node
- Add a **Condition** node
- Add a **Variable management** node
- Add a **Topic management** node

Supporting module (s):

- Manage topics in Microsoft Copilot Studio

Manage variables and entities

- Edit variable name
- Configure variable scope
- Create and edit a Copilot Studio list entity
- Reuse an existing entity

Supporting module (s):

- Work with entities and variables in Microsoft Copilot Studio

Configure generative AI

- Add a public website as a knowledge source
- Add a file as a knowledge source
- Set trigger priority for a topic
- Configure agent content moderation

Supporting module (s):

- Build an initial agent with Microsoft Copilot Studio

Retrieve data from Dataverse

- Create an action
- Call a Power Automate flow
- Configure inputs in a flow
- Configure outputs in a flow
- Render the outputs in a message

  Supporting module (s):
  - Create an agent with Microsoft Copilot Studio and Dataverse for Teams

Microsoft Ignite Challenge Sweepstakes Official Rules

Enter and complete one of the nine Microsoft Ignite challenges, then submit a sweepstakes entry form by December 15, 2025, for a chance to receive a 50% discount Microsoft Certification voucher (below sweepstakes terms and conditions apply). While challenge end dates may vary, the sweepstakes entry window does not, so be sure to get started today!

Steps to enter

1. Review the sweepstakes terms and conditions on this page.
2. Register for and complete one of the below nine Microsoft Ignite challenges prior to December 15, 2025 (regardless of individual challenge end date).

    - Create Agentic AI Solutions with Azure AI Foundry
    - Build Scalable AI Apps on Azure Database for PostgreSQL
    - Fabric Data Engineer (DP-700) Ignite & Fabric Data Days Skills Challenge
    - Fabric Analytics Engineer (DP-600) Ignite & Fabric Data Days Skills Challenge
    - Azure Data Fundamentals | Ignite Skills Challenge
    - Secure and govern AI
    - Code Smarter and Faster with GitHub Copilot
    - Azure Migration Mastery Skills Challenge
    - Modernize and Innovate Skills Challenge

3. Once you complete the challenge, submit an entry via the sweepstakes entry form before the sweepstakes period ends on December 15, 2025.
4. If you're selected as a winner of one of the **50% discount certification exam vouchers** (5,000 available), you will be contacted by Pearson Vue via email with your voucher code, along with the steps on how to redeem. Those steps can also be found the 'How to redeem your prize ' page.

    - The discount certification exam voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue.
    - The discount certification exam voucher **is not eligible** for any GitHub certification exams.

After reviewing the official rules, if you have more questions, please consult the FAQ.

Sweepstakes terms and conditions

1. SPONSOR

These Official Rules (“Rules”) govern the operation of the Microsoft Ignite Challenge Sweepstakes (“Sweepstakes”). Microsoft Corporation, One Microsoft Way, Redmond, WA, 98052, USA, is the Sweepstakes sponsor (“Sponsor”).

2. DEFINITIONS

In these Rules, "Microsoft", "we", "our", and "us" refer to Sponsor and “you” and "yourself" refers to a Sweepstakes participant, or the parent/legal guardian of any Sweepstakes entrant who has not reached the age of majority to contractually obligate themselves in their legal place of residence. By entering you (your parent/legal guardian if you are not the age of majority in your legal place of residence) agree to be bound by these Rules.

3. ENTRY PERIOD

The Sweepstakes starts at 12:00 AM (00:00) UTC on November 17, 2025, and ends at 11:59 PM (23:59) UTC on December 15, 2025, (“Entry Period”) and will consist of the following Prize Periods (each a “Prize Period”).

Expand table

Prize Period	Start Date/Time	End Date/Time
1	November 17, 2025 at 12:00 AM UTC	November 24, 2025 at 11:59 PM UTC
2	November 25, 2025 at 12:00 AM UTC	December 1, 2025 at 11:59 PM UTC
3	December 2, 2025 at 12:00 AM UTC	December 8, 2025 at 11:59 PM UTC
4	December 9, 2025 at 12:00 AM UTC	December 15, 2025 at 11:59 PM UTC

Entries will be eligible for the Prize period in which they are received, and non-winning entries will be carried over to subsequent Prize Periods. Entrants only need to enter once to be included for all future prize periods, as non-winning entries are carried over to subsequent drawings. Those who completed a qualifying challenge prior to the start of the sweepstakes are still eligible to enter and will be included in the prize period in which they submitted the entry (not completion of the challenge).

4. ELIGIBILITY

To enter, you must be 18 years of age or older. If you are 18 years of age or older but have not reached the age of majority in your legal place of residence, then you must have consent of a parent/legal guardian.

Employees and directors of Microsoft Corporation and its subsidiaries, affiliates, advertising agencies, and Sweepstakes Parties are not eligible, nor are persons involved in the execution or administration of this promotion, or the family members of each above (parents, children,

siblings, spouse/domestic partners, or individuals residing in the same household). Void in Cuba, Iran, North Korea, Sudan, Syria, Region of Crimea, Russia, and where prohibited.

5. HOW TO ENTER

No Purchase Necessary.

To enter, you must register for and complete one of nine Microsoft Ignite challenges and submit a sweepstakes entry form by December 15, 2025 at 11:59 PM UTC (23:59). The nine qualifying Microsoft Ignite challenges include:

- Create Agentic AI Solutions with Azure AI Foundry
- Build Scalable AI Apps on Azure Database for PostgreSQL
- Fabric Data Engineer (DP-700) Ignite & Fabric Data Days Skills Challenge
- Fabric Analytics Engineer (DP-600) Ignite & Fabric Data Days Skills Challenge
- Azure Data Fundamentals | Ignite Skills Challenge
- Secure and govern AI
- Code Smarter and Faster with GitHub Copilot
- Azure Migration Mastery Skills Challenge
- Modernize and Innovate Skills Challenge

After registering for and completing one of the nine Microsoft Ignite challenges, you must visit https://aka.ms/microsoftignitechallenge2025/entry to complete an official entry form prior to December 15, 2025, at 11:59 PM UTC (23:59), regardless of the end date of the qualifying challenge. For doing this, you will receive one (1) entry into the corresponding weekly Prize Period drawing. There is a limit of one (1) entry per person overall. If you are not selected in the corresponding weekly Prize Period drawing, your entry will be rolled over into the next Prize Period drawing, up until the end of the sweepstakes. You do not gain more entries for (1) completing more challenges, nor submitting multiple entry forms.

If you would like to be removed from the Microsoft Ignite Challenge Sweepstakes and have your personal data deleted, please email us at IgniteChallengeSweepstakes@microsoft.com. This request must be sent to the email address you provided for registration. We will delete your personal data within seven (7) business days. This action is limited to this contest and will have no impact on other Microsoft applications. Please see the Microsoft Privacy Statement for information on broader privacy requests.

Any attempt by you to obtain more than the stated number of entries by using multiple/different accounts, identities, registrations, logins, or any other methods will void your entries, and you may be disqualified. Use of any automated system to participate is prohibited.

We are not responsible for excess, lost, late, or incomplete entries. If disputed, entries will be deemed submitted by the "authorized account holder" of the email address, social media account, or other method used to enter. The "authorized account holder" is the natural person

assigned to an email address by an internet or online service provider, or other organization responsible for assigning email addresses.

6. WINNER SELECTION AND NOTIFICATION

Pending confirmation of eligibility, potential prize winners will be selected within seven (7) days following each Prize Period by Microsoft or their Agent in a random drawing from among all eligible entries as follows:

Expand table

Prize Period	Number of Winners
1	2,000
2	1,000
3	1,000
4	1,000

Winner email addresses will be shared with Pearson Vue for voucher fulfillment. Vouchers are issued by MindHub Pro by Pearson VUE (privacy statement available here). Winners will receive an email from 'MindhubPro by Pearson VUE' with a digital code to download their prize. If a selected winner cannot be contacted, is ineligible, or fails to claim a prize, the selected winner will forfeit their prize and an alternate winner will be selected time allowing. If you are a potential winner and you are 18 or older but have not reached the age of majority in your legal place of residence, we may require your parent/legal guardian to sign all required forms on your behalf. Only three alternate winners will be selected, after which unclaimed prizes will remain unawarded.

7. PRIZES

The following prizes will be awarded:

Each winner will receive a 50% discount exam voucher of the 5,000 available. Approximate Retail Value (ARV) $0.00.

Certification codes expire on **April 30, 2026**, so exam(s) **must be booked and completed before this date**.

50% discount exam voucher **is eligible** for all Microsoft Certification exams offered through Pearson Vue. Discount voucher is **not eligible** for GitHub Certification exams.

The total Approximate Retail Value (ARV) of all prizes: **$0.00**.

We will only award one (1) prize per person overall. No more than the stated number of prizes will be awarded. No substitution, transfer, or assignment of prize permitted, except that Microsoft reserves the right to substitute a prize of equal or greater value in the event the offered prize is unavailable. Microsoft products awarded as prizes are awarded "AS IS" and WITHOUT WARRANTY OF ANY KIND, express or implied (including any implied warranty of merchantability or fitness for a particular purpose); you assume the entire risk of quality and performance, and should the prizes prove defective, you assume the entire cost of all necessary servicing or repair. This is so even if the Microsoft product mentions a warranty on its packaging, in a manual, or in marketing materials; no warranty applies to Microsoft products awarded as prizes.

Microsoft does not give any warranty of any kind, express or implied (including any implied warranty of merchantability or fitness for a particular purpose) on products made by a company other than Microsoft that are awarded as prizes. Please contact the manufacturer to see if it is covered by that company's warranty.

Prizes will be sent no later than 7 days after winner selection. Taxes on the prize, if any, are the sole responsibility of the winner, who is advised to seek independent counsel regarding the tax implications of accepting a prize. By accepting a prize, you agree that Microsoft may use your entry, name, image and hometown online and in print, or in any other media, in connection with this Sweepstakes without payment or compensation to you, except where prohibited by law.

8. ODDS

The odds of winning are based on the number of eligible entries received.

9. GENERAL CONDITIONS AND RELEASE OF LIABILITY

To the extent allowed by law, by entering you agree to release and hold harmless Microsoft and its respective parents, partners, subsidiaries, affiliates, employees, and agents from any and all liability or any injury, loss, or damage of any kind arising in connection with this Sweepstakes or any prize won.

All local laws apply. The decisions of Microsoft are final and binding.

We reserve the right to cancel, change, or suspend this Sweepstakes for any reason, including cheating, technology failure, catastrophe, war, or any other unforeseen or unexpected event that affects the integrity of this Sweepstakes, whether human or mechanical. If the integrity of the Sweepstakes cannot be restored, we may select winners from among all eligible entries received before we have to cancel, change or suspend the Sweepstakes.

If you attempt or we have strong reason to believe that you have compromised the integrity or the legitimate operation of this Sweepstakes by cheating, hacking, creating a bot or other

automated program, or by committing fraud in any way, we may seek damages from you to the full extent of the law and you may be banned from participation in future Microsoft promotions.

10. USE OF YOUR ENTRY

Personal data you provide while entering this Sweepstakes will be used by Microsoft and/or its agents and prize fulfillers acting on Microsoft's behalf only for the administration and operation of this Sweepstakes and in accordance with the Microsoft Privacy Statement.

11. GOVERNING LAW

This Sweepstakes will be governed by the laws of the State of Washington, and you consent to the exclusive jurisdiction and venue of the courts of the State of Washington for any disputes arising out of this Sweepstakes.

12. WINNERS LIST

Send an email to IgniteChallengeSweepstakes@microsoft.com with the subject line "Microsoft Ignite Challenge Sweepstakes winners" within 30 days of December 15, 2025 to receive a link to a list of winners.

Last updated on 11/14/2025

Microsoft Ignite Challenge Sweepstakes Frequently Asked Questions

Enter and complete one of the nine Microsoft Ignite challenges, then submit a sweepstakes entry form by December 15, 2025, for a chance to receive a 50% discount Microsoft Certification voucher (sweepstakes terms and conditions apply). While challenge end dates may vary, the sweepstakes entry window does not, so be sure to get started today!

Steps to enter

1. Review the official rules page.
2. Register for and complete one of the below nine Microsoft Ignite challenges prior to December 15, 2025 (regardless of individual challenge end date).

    - Create Agentic AI Solutions with Azure AI Foundry
    - Build Scalable AI Apps on Azure Database for PostgreSQL
    - Fabric Data Engineer (DP-700) Ignite & Fabric Data Days Skills Challenge
    - Fabric Analytics Engineer (DP-600) Ignite & Fabric Data Days Skills Challenge
    - Azure Data Fundamentals | Ignite Skills Challenge
    - Secure and govern AI
    - Code Smarter and Faster with GitHub Copilot
    - Azure Migration Mastery Skills Challenge
    - Modernize and Innovate Skills Challenge

3. Once you complete the challenge, submit an entry via the sweepstakes entry form before the sweepstakes period ends on December 15, 2025.
4. If you're selected as a winner of one of the **50% discount certification exam vouchers** (5,000 available), you will be contacted by Pearson Vue via email with your voucher code, along with the steps on how to redeem. Those steps can also be found the 'How to redeem your prize' page.

    - The discount certification exam voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue.
    - The discount certification exam voucher **is not eligible** for any GitHub certification exams.

After reviewing the official rules, if you have more questions, consult the FAQ below.

How do I participate in the Microsoft Ignite Challenge sweepstakes?

To participate in the Microsoft Ignite Challenge Sweepstakes, you must register for and complete one of the nine qualifying challenges and submit a sweepstakes entry form by

December 15, 2025. While challenge end dates may vary, the sweepstakes entry window does not, so be sure to submit your entry form prior to December 15.

Steps to enter

1. Review the official rules page.
2. Register for and complete one of the below nine Microsoft Ignite challenges prior to December 15, 2025 (regardless of individual challenge end date).

    - Create Agentic AI Solutions with Azure AI Foundry
    - Build Scalable AI Apps on Azure Database for PostgreSQL
    - Fabric Data Engineer (DP-700) Ignite & Fabric Data Days Skills Challenge
    - Fabric Analytics Engineer (DP-600) Ignite & Fabric Data Days Skills Challenge
    - Azure Data Fundamentals | Ignite Skills Challenge
    - Secure and govern AI
    - Code Smarter and Faster with GitHub Copilot
    - Azure Migration Mastery Skills Challenge
    - Modernize and Innovate Skills Challenge

3. Once you complete the challenge, submit an entry via the sweepstakes entry form before the sweepstakes period ends on December 15, 2025.
4. If you're selected as a winner of one of the **50% discount certification exam vouchers** (5,000 available), you will be contacted by Pearson Vue via email with your voucher code, along with the steps on how to redeem. Those steps can also be found the 'How to redeem your prize ' page.

    - The discount certification exam voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue.
    - The discount certification exam voucher **is not eligible** for any GitHub certification exams.

To register for and complete a Microsoft Ignite Challenge, you must have a Microsoft Learn profile. If you do not currently have one that is okay, you can create a free account as register for one of the qualifying challenges.

How do I complete a Microsoft Ignite Challenge?

After you have logged in (or created) your Microsoft Learn profile and register for one of the nine qualifying challenges, go to the leaderboard page and click the button to go to the challenge collection.

Once on the challenge collection, complete the listed training content before December 15, 2025.

Note that just completing a challenge does not enter you into the sweepstakes; you must complete a sweepstakes entry form by December 15, 2025, after finishing the challenge to be entered in the drawing.

How can I tell if I've completed a Microsoft Ignite Challenge?

Login to your Microsoft Learn profile and go to the challenges home page. From there, look for the qualifying Microsoft Ignite Challenge in which you registered and participated. On the card, it will show a progress bar if there is still content to complete or will show a checkmark and say "completed" if you have finished the challenge.

You can also login to your Microsoft Learn profile and go directly to the challenge leaderboard page in which you participated. At the top of the page, it will show a "where you stand" section with a display of how many content items you've completed out of the total available in the collection (e.g., 8/8, 12/12, etc.).

The nine qualifying Microsoft Ignite Challenges are below.

- Create Agentic AI Solutions with Azure AI Foundry
- Build Scalable AI Apps on Azure Database for PostgreSQL
- Fabric Data Engineer (DP-700) Ignite & Fabric Data Days Skills Challenge
- Fabric Analytics Engineer (DP-600) Ignite & Fabric Data Days Skills Challenge
- Azure Data Fundamentals | Ignite Skills Challenge
- Secure and govern AI
- Code Smarter and Faster with GitHub Copilot
- Azure Migration Mastery Skills Challenge
- Modernize and Innovate Skills Challenge

Note that just completing a challenge does not enter you into the sweepstakes; you must complete a sweepstakes entry form by December 15, 2025, after finishing the challenge to be entered in the drawing.

I've completed a Microsoft Ignite Challenge. Now what?

Once you have completed one of the nine qualifying Microsoft Ignite Challenges, you must submit for an entry via the sweepstakes entry form.

To complete the submission, you will need to provide; (1) your Microsoft Learn **username** (which can be validated here), (2) the email address you would like the discount voucher code sent to in the event you are a winner, and (3) the Microsoft Ignite Challenge you completed, along with verifying that you've read and consent to the official rules.

Winners will be drawn weekly starting on November 25, 2025, with the last drawing being on December 16, 2025. Winners will be notified within seven (7) days of the drawing if they have been selected. The discount certification exam voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue. It **is not eligible** for any GitHub Certification exam.

To see the complete rules of the sweepstakes, which includes the prize drawing schedule, review the official rules page.

When are winners drawn for the Microsoft Ignite Challenge Sweepstakes?

There will be weekly drawings starting November 25, 2025 with the final drawing being on December 16, 2025. Winners will be notified within seven (7) days of the drawings. Please refer to section three (3), 'Entry Periods', of the Microsoft Ignite Challenge Sweepstakes official rules.

How will I be notified if I am a winner of a Microsoft Ignite Challenge Sweepstakes drawing?

Winners will be notified via an email sent to the email address they provided in their Microsoft Ignite Challenge Sweepstakes form submission.

The email will be from 'MindHub Pro by Pearson VUE' and will contain the 50% discount certification exam voucher won along with the expiration date and steps on how to redeem.

Emails will be sent within seven (7) days of the applicable Prize Period drawing.

Refer to section six (6), 'Winner selection and notification', of the Microsoft Ignite Sweepstakes official rules for a full breakdown.

How long does the Microsoft Ignite Challenge Sweepstakes run?

The sweepstake runs until December 15, 2025, at 11:59 PM UTC (23:59).

I am a sweepstakes winner; how long do I have to redeem my prize?

All Microsoft Ignite Challenge Sweepstakes discount certification exam vouchers must be redeemed by **April 30, 2026**.

This means you **must schedule and take** your chosen exam by **April 30, 2026**.

When using your voucher, you will **not** be able to use it for an exam date attempting to be scheduled for beyond **April 30, 2026**.

The discount exam voucher **is eligible** for any Microsoft Certification exams conducted by Pearson Vue. It **is not eligible** for any GitHub Certification exam.

For the full list of rules, please refer to the Microsoft Ignite Challenge Sweepstakes official rules.

How do I redeem my discount Microsoft Certification exam voucher?

Instructions on how to redeem your voucher will be provided in the notification email you received from 'MindHub Pro by Pearson VUE' that also contained your voucher code. You can additionally refer to the 'How to redeem your prize' page.

Discount certification exam voucher **is eligible** for all Microsoft Certification exams conducted by Pearson Vue. It **is not eligible** for GitHub Certification exams.

Last updated on 11/14/2025

How to redeem your Microsoft Ignite Challenge Sweepstakes prize

Congratulations on being a Microsoft Ignite Challenge Sweepstakes winner and receiving a 50% discount certification exam voucher! You will have received an email from 'MindHub Pro by Pearson VUE' that contains your voucher code and expiration date.

Note that you **must schedule and take** your chosen exam by **April 30, 2026**. You can review the Microsoft Ignite Challenge Sweepstakes official rules for the full set terms and conditions.

The discount certification exam voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue. It **is not eligible** for any GitHub Certification exam.

If you have not received an email from 'MindHub Pro by Pearson Vue', validate you've completed these steps.

1. Reviewed the official rules page.
2. Registered for and completed one of the below nine Microsoft Ignite challenges prior to December 15, 2025 (regardless of individual challenge end date).

    - Create Agentic AI Solutions with Azure AI Foundry
    - Build Scalable AI Apps on Azure Database for PostgreSQL
    - Fabric Data Engineer (DP-700) Ignite & Fabric Data Days Skills Challenge
    - Fabric Analytics Engineer (DP-600) Ignite & Fabric Data Days Skills Challenge
    - Azure Data Fundamentals | Ignite Skills Challenge
    - Secure and govern AI
    - Code Smarter and Faster with GitHub Copilot
    - Azure Migration Mastery Skills Challenge
    - Modernize and Innovate Skills Challenge

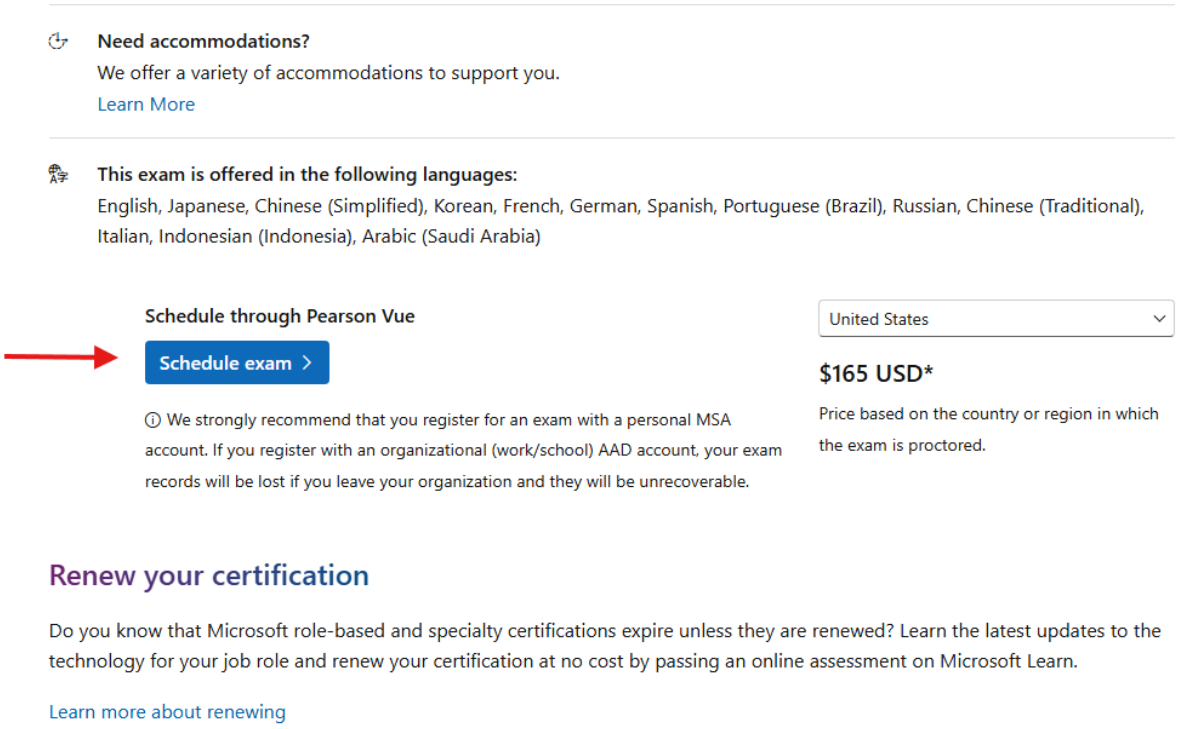
3. Completed the sweepstakes entry form.

If you have completed the above steps, you may not have been randomly selected as a winner. Review the Microsoft Ignite Challenge Sweepstakes Official Rules and FAQ for more information.

Steps to redeem

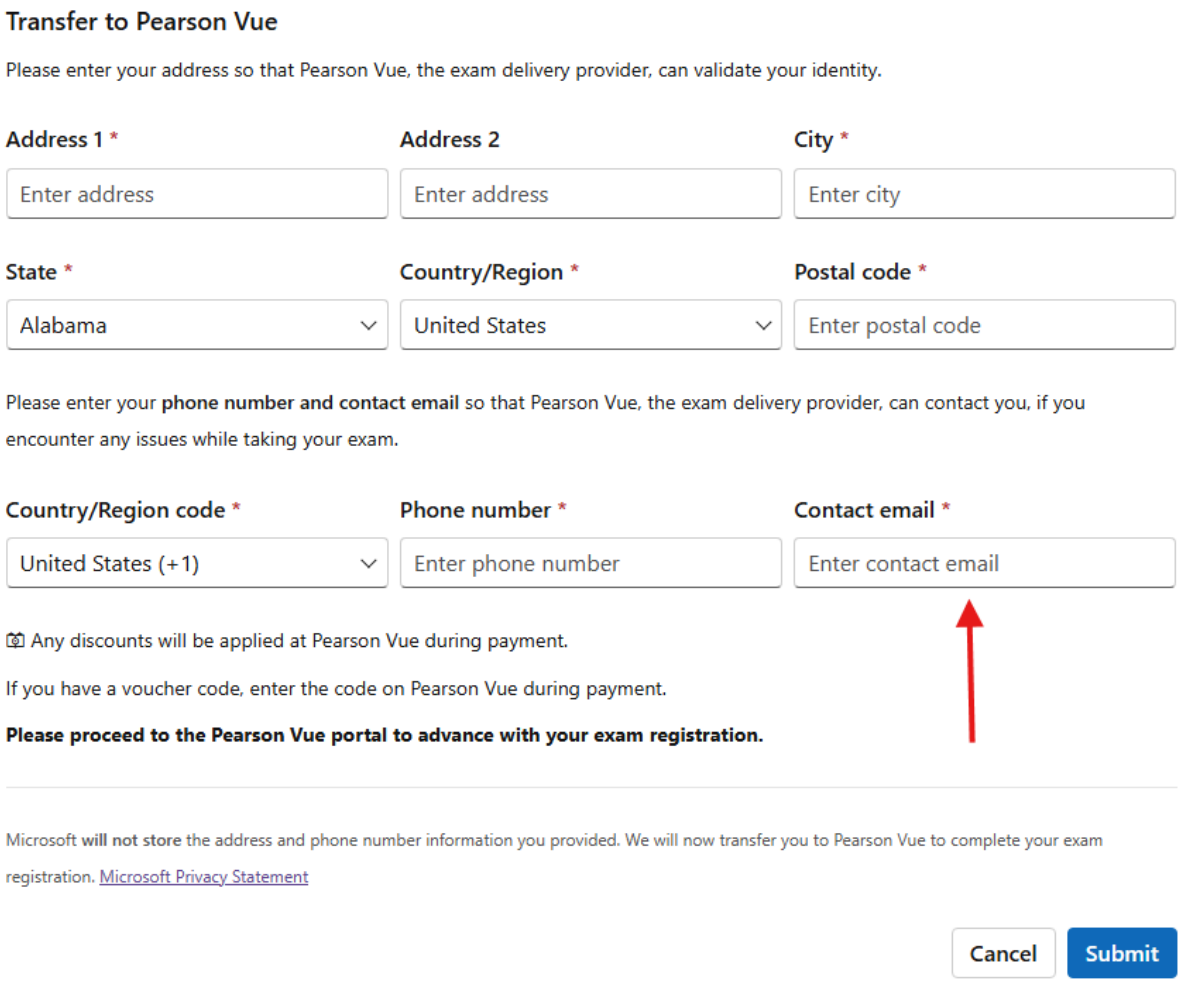
1. Select one of the Microsoft Certification exams that are listed on Microsoft Learn.
    a. The discount voucher **is eligible** for any Microsoft Certification exam conducted by Pearson Vue.
    b. The discount voucher **is not eligible** for any GitHub Certification exams.

2. Review the exam details, scroll down and click the “Schedule through Pearson Vue” schedule exam button. Some exams may have two options, make sure to select the Pearson Vue option.

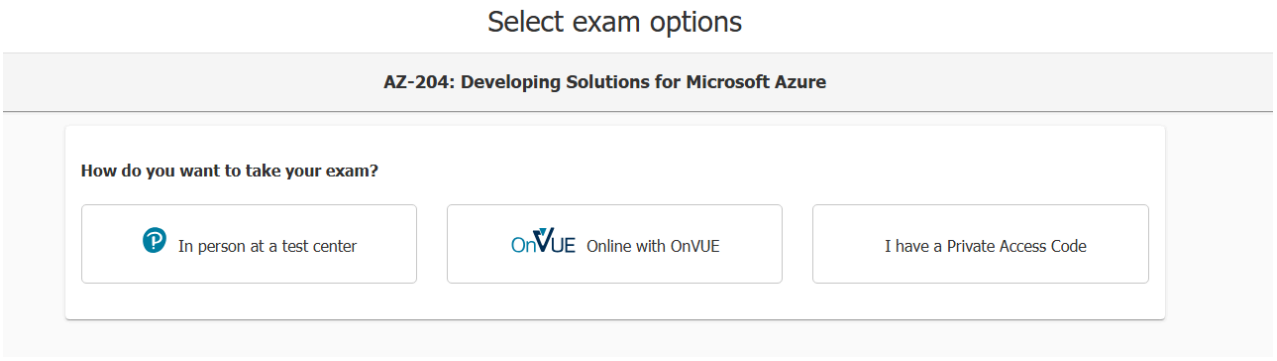


3. If you are not logged in to your Microsoft Learn profile, you will be asked to do so at this point. After doing so, you will be asked to provide additional information for transfer to Pearson Vue. Complete the form and **be sure to provide the same contact email address**

in which you received your voucher code.



4. You will be directed to Pearson Vue and prompted to select how you want to take your exam. Options may vary depending on which exam you have selected. Choose your preference and continue, noting that the voucher code you received **is not** a "Private Access Code".



If you select "In person at a test center", **proceed to step 5**.

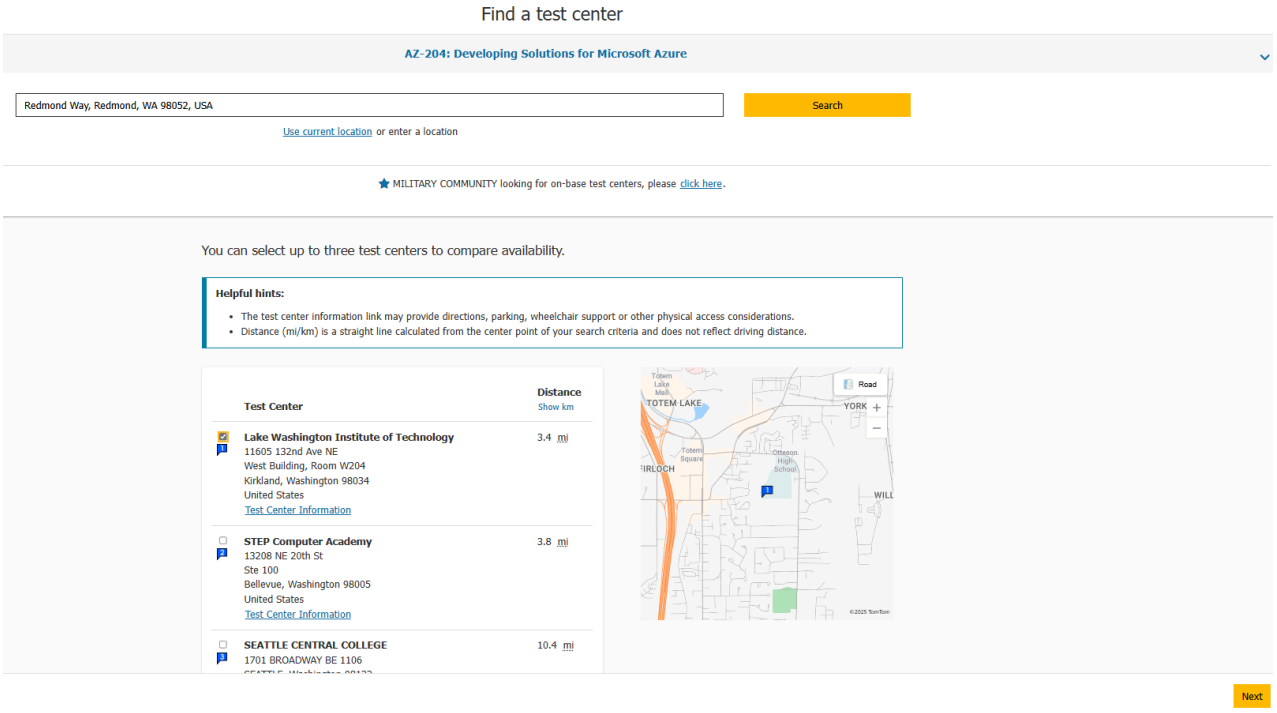
If you select "OnVUE online with OnVUE", **proceed to step 6**.

5. If you have selected to take the exam in person, you will next be prompted to:

a. Select your preferred exam language. Languages provided vary based on exam selected.

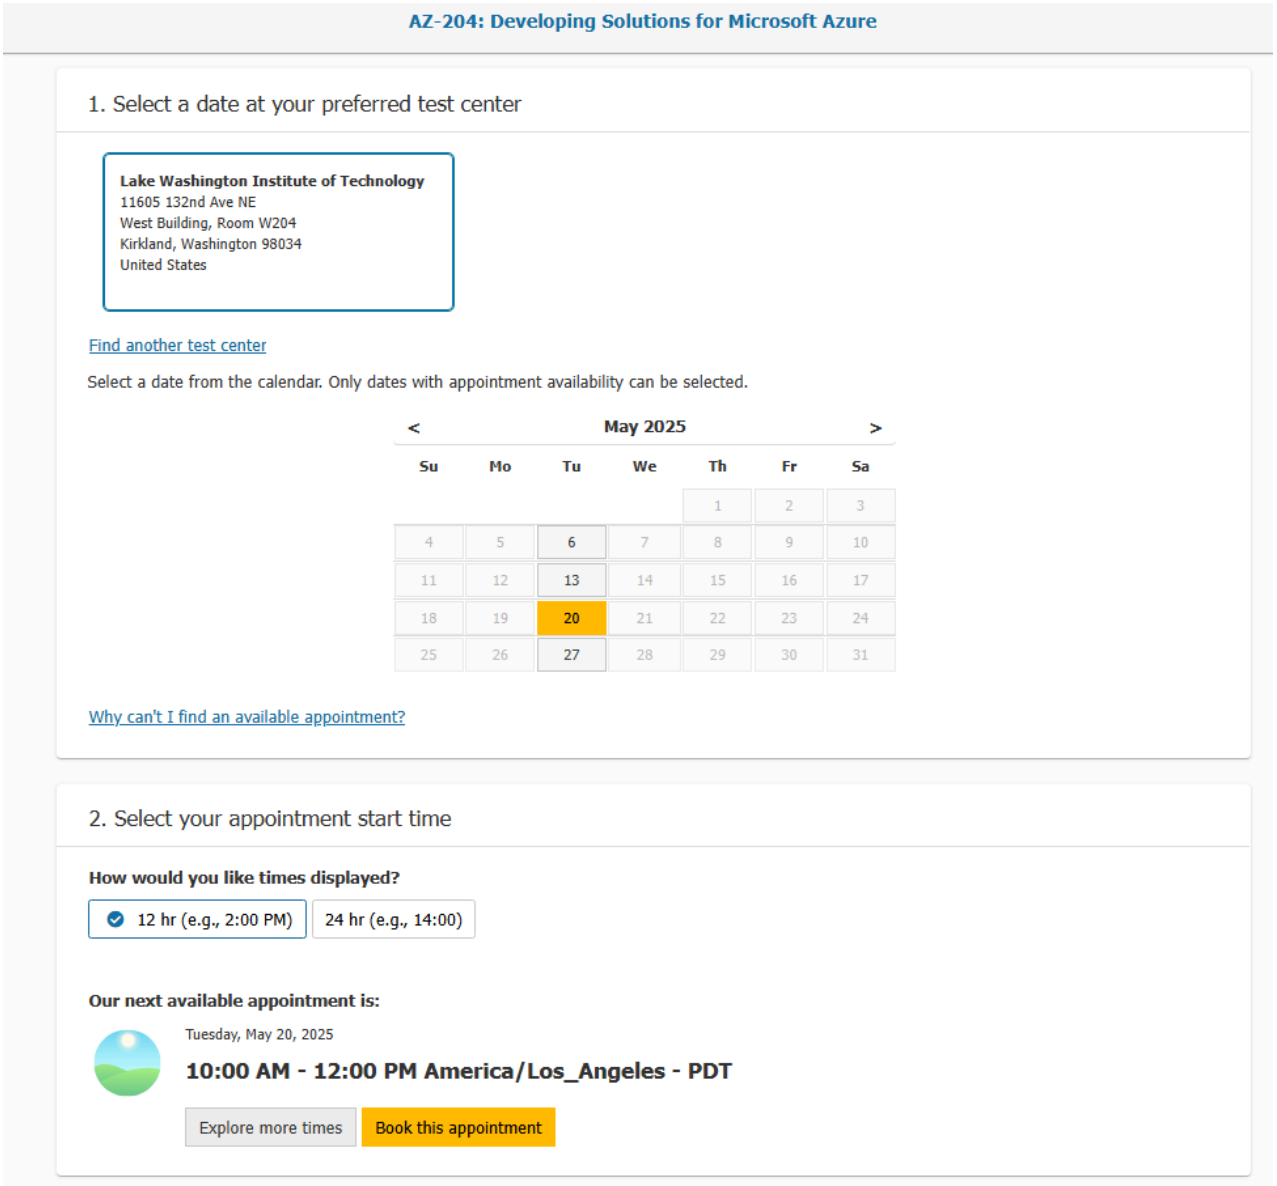
b. Agree to Pearson VUE exam terms and Microsoft Certification terms.

c. Select your preferred testing center.



Testing center options will vary based on your location.

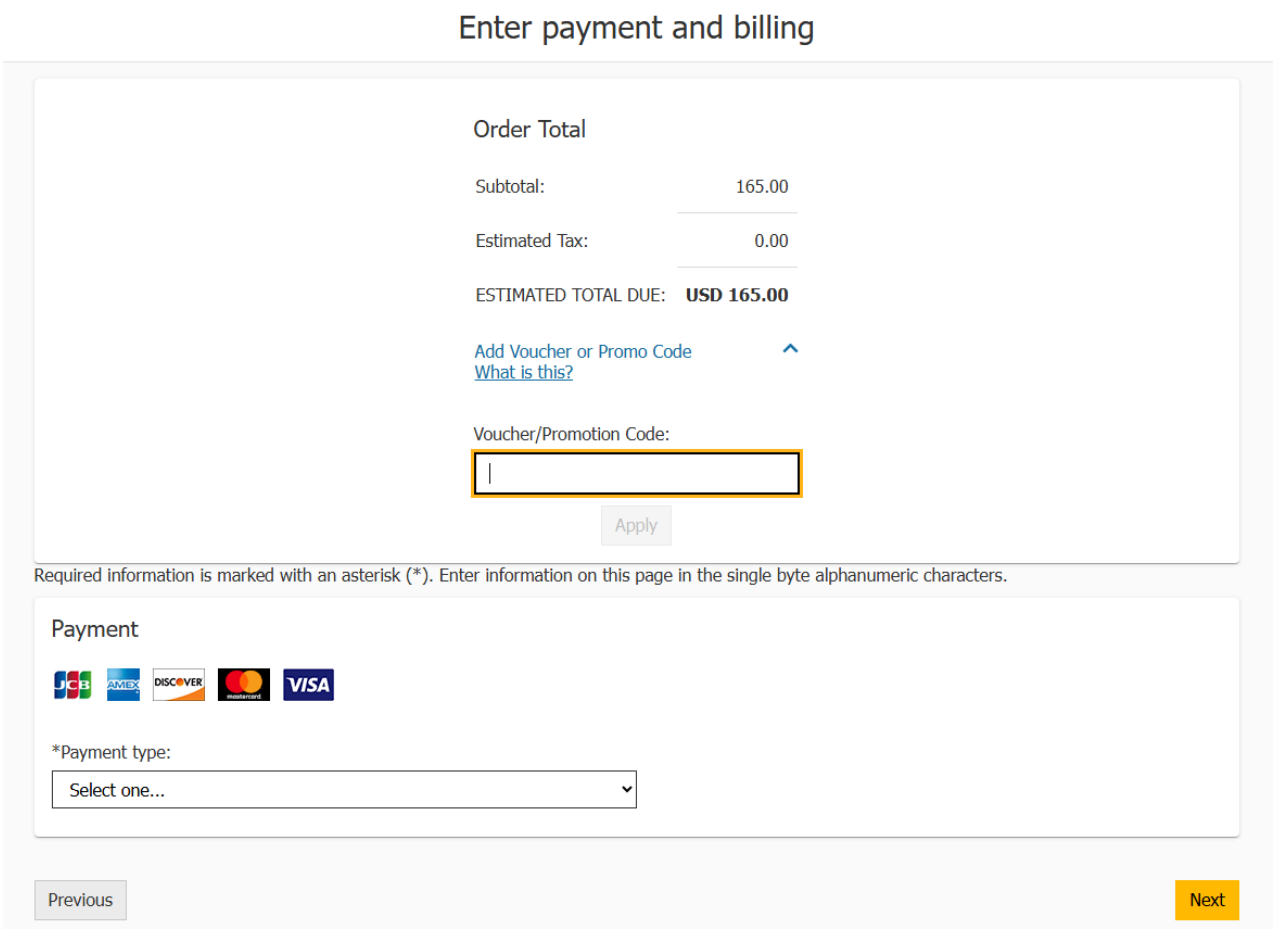
d. Select your preferred exam date and time.



Date and time selected must be before April 30, 2026, to use your voucher. If an exam date beyond April 30, 2026 is selected, you will not be able to apply, the voucher to the cost of the exam.

e. Next you will be asked to confirm your exam scheduled date and contact information. Review and proceed to checkout. **It will still display the cost of the exam—this is expected**, continue to proceed to checkout.

f. In the next screen, you will see an option for Add Voucher or Promo Code. Enter the voucher code you received via email from 'MindPro Hub by Pearson VUE'.

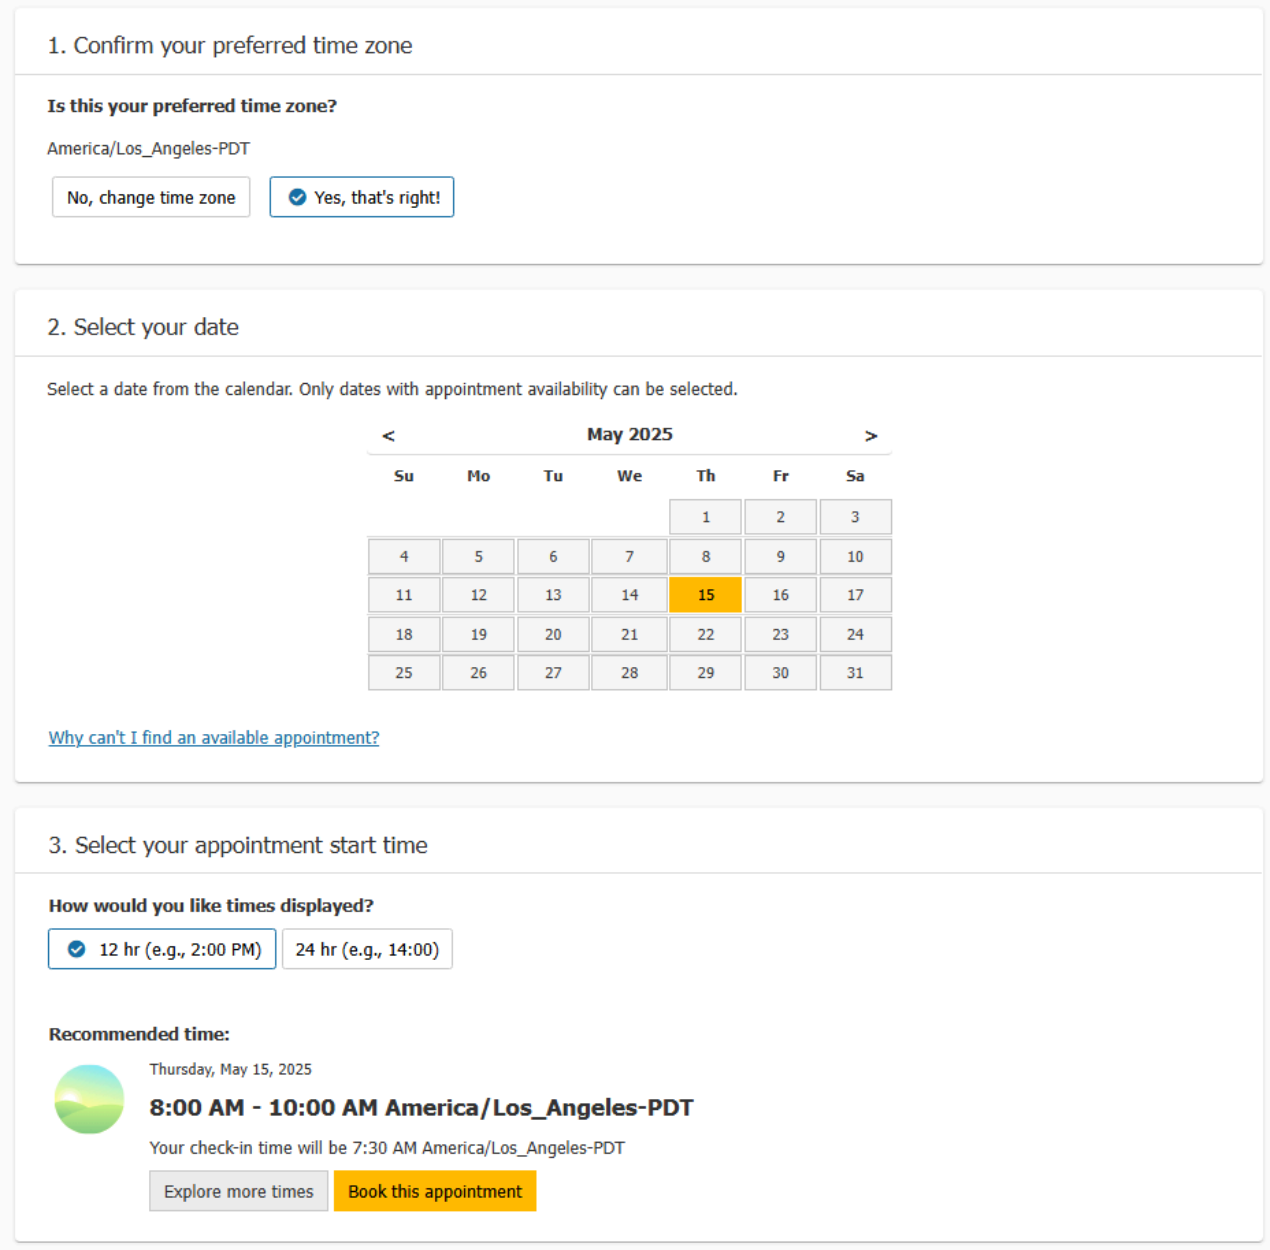


After entering the code, click ‘Apply’ to have it applied to the order, then select ‘Next’ to complete your transaction and schedule your exam!

If you experience any issues attempting to redeem your voucher, please contact mindhubprohelp@pearson.com.

6. If you have selected to take the exam online, you will next be prompted to:

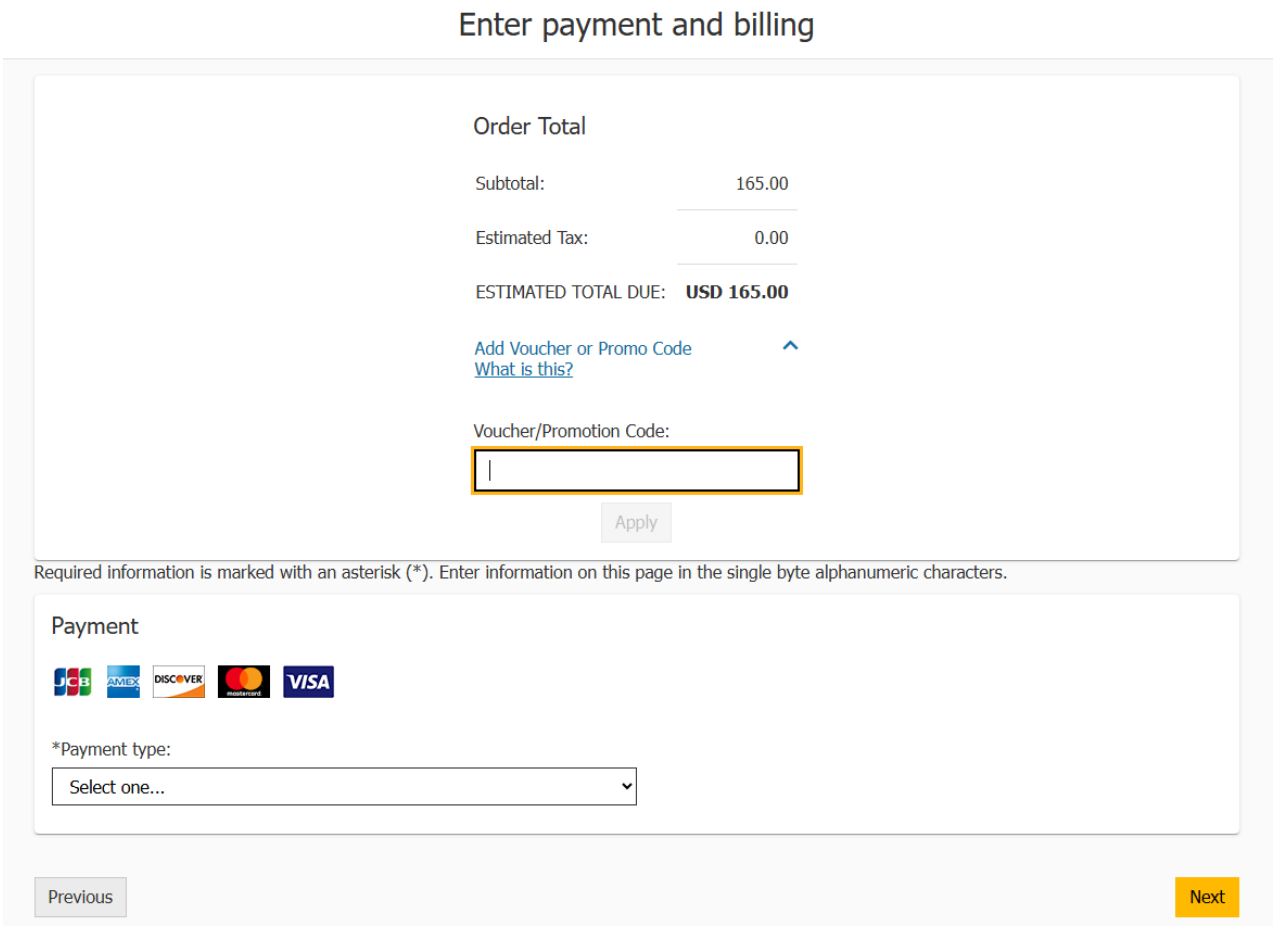
a. Select your preferred exam language. Languages provided vary based on the exam selected.
b. Agree to Pearson VUE exam terms and Microsoft Certification terms.
c. Select your preferred proctor language. Language availability will vary based on exam selection.
d. Confirm your preferred time zone (will default to browser setting), exam date and time.



Date and time selected must be before April 30, 2026 to use your voucher. If an exam date beyond April 30, 2026 is selected, you will not be able to apply the voucher to the cost of the exam.

e. Next you will be asked to confirm your exam scheduled date and contact information. Review and proceed to checkout. **It will still display the cost of the exam—this is expected**, continue to proceed to checkout.

f. In the next screen, you will see an option for Add Voucher or Promo Code. Enter the voucher code you received via email from 'MindPro Hub by Pearson VUE'.



After entering the code, click ‘Apply’ to have it applied to the order, then select ‘Next’ to complete your transaction and schedule your exam!

If you experience any issues attempting to redeem your voucher, please contact mindhubprohelp@pearson.com.

Azure Cosmos DB Skills Challenge Sweepstakes Official Rules

Enter and complete the Microsoft CosmosDB Skilling Challenge, then submit a sweepstakes entry form by **May 8, 2026**, for a chance to receive a 100% discount Microsoft Certification voucher.

Steps to enter

1. Review the sweepstakes terms and conditions on this page.
2. Register for and complete the CosmosDB Skilling Challenge prior to May 8, 2026.
3. Once you complete the challenge, submit an entry via the sweepstakes entry form before the sweepstakes period ends on May 8, 2026.
4. If you're selected as a winner of one of the 100% discount certification exam vouchers (500 available), you will be contacted by Pearson Vue via email with your voucher code, along with the steps on how to redeem.

The discount certification exam voucher is eligible for the exam below.

- **DP-420: Azure Cosmos DB Developer Specialty**

Learn more and register: https://learn.microsoft.com/credentials/certifications/azure-cosmos-db-developer-specialty/?practice-assessment-type=certification

Sweepstakes terms and conditions

1. SPONSOR

These Official Rules ("Rules") govern the operation of the Microsoft CosmosDB Skilling Challenge Sweepstakes ("Sweepstakes"). Microsoft Corporation, One Microsoft Way, Redmond, WA, 98052, USA, is the Sweepstakes sponsor ("Sponsor").

2. DEFINITIONS

In these Rules, "Microsoft", "we", "our", and "us" refer to Sponsor and "you" and "yourself" refers to a Sweepstakes participant, or the parent/legal guardian of any Sweepstakes entrant who has not reached the age of majority to contractually obligate themselves in their legal place of residence. By entering you (your parent/legal guardian if you are not the age of majority in your legal place of residence) agree to be bound by these Rules.

3. ENTRY PERIOD

The Sweepstakes starts at **6:00 AM (06:00) UTC on April 15, 2026**, and ends at **11:59 PM (23:59) UTC on May 8, 2026** ("Entry Period") and will consist of the following Prize Period:

Expand table

Prize Period	Start Date/Time	End Date/Time
1	May 11, 2026 at 12:00 AM UTC	May 17, 2026 at 11:59 PM UTC

Entries will be eligible for the Prize Period in which they are received. Entrants only need to enter once.

4. ELIGIBILITY

To enter, you must be 18 years of age or older. Employees and directors of Microsoft Corporation and its subsidiaries, affiliates, advertising agencies, and Sweepstakes Parties are not eligible. Void in Cuba, Iran, North Korea, Sudan, Syria, Region of Crimea, Russia, and where prohibited.

5. HOW TO ENTER - No Purchase Necessary

To enter, you must register for and complete the CosmosDB Skilling Challenge and submit a sweepstakes entry form by **May 8, 2026 at 11:59 PM UTC (23:59)**.

After registering and completing the challenge, you must visit the entry form URL to complete an official entry prior to the deadline. There is a limit of one (1) entry per person overall. Non-selected entries roll over to the next Prize Period drawing.

Skills Challenge

Entry form

6. WINNER SELECTION AND NOTIFICATION

Potential prize winners will be selected within seven (7) days following the Prize Period by Microsoft or their Agent in a random drawing from among all eligible entries:

Expand table

Prize Period	Number of Winners
1	500

Winner email addresses will be shared with Pearson Vue for voucher fulfillment. Vouchers are issued by MindHub Pro by Pearson VUE. Winners will receive an email from 'MindhubPro by Pearson VUE' with a digital code. Only three alternate winners will be selected; after which unclaimed prizes will remain unawarded.

7. PRIZES

Each winner will receive a 100% discount exam voucher (500 available). Approximate Retail Value (ARV) $0.00. Certification codes expire on **June 30, 2026**, so exam(s) must be booked and completed before this date.

100% discount exam voucher is eligible for the following Microsoft Certification exam offered through Pearson Vue:

- **DP-420: Azure Cosmos DB Developer Specialty**

Discount voucher is NOT eligible for GitHub Certification exams. Total ARV of all prizes: $0.00. One (1) prize per person overall.

8. ODDS

The odds of winning are based on the number of eligible entries received.

9. GENERAL CONDITIONS AND RELEASE OF LIABILITY

To the extent allowed by law, by entering you agree to release and hold harmless Microsoft and its respective parents, partners, subsidiaries, affiliates, employees, and agents from any and all liability arising in connection with this Sweepstakes or any prize won. All local laws apply. The decisions of Microsoft are final and binding. Microsoft reserves the right to cancel, change, or suspend this Sweepstakes for any reason.

10. USE OF YOUR ENTRY

Personal data you provide while entering this Microsoft CosmosDB Skilling Challenge Sweepstakes will be used by Microsoft and/or its agents and prize fulfillers acting on Microsoft's behalf only for the administration and operation of this Sweepstakes and in accordance with the Microsoft Privacy Statement.

11. GOVERNING LAW

This Sweepstakes will be governed by the laws of the State of Washington, and you consent to the exclusive jurisdiction and venue of the courts of the State of Washington for any disputes arising out of this Sweepstakes.

12. WINNERS LIST

Send an email to Microsoft Challenge Sweepstakes with the subject line “Microsoft CosmosDB Skilling Challenge Sweepstakes winners” within 30 days of May 8, 2026 (by June 7, 2026), to receive a list of winners.

Last updated on 04/14/2026

Frequently Asked Questions - Azure Cosmos DB Conf Skills Challenge Sweepstakes

Enter and complete the Azure Cosmos DB Conf Skills Challenge, then submit a sweepstakes entry form by **May 8, 2026**, for a chance to receive a 100% discount Microsoft Certification voucher.

Steps to enter

1. Review the sweepstakes terms and conditions on the official rules page.
2. Register for and complete the Azure Cosmos DB Conf Skills Challenge prior to May 8, 2026.
3. Once you complete the challenge, submit an entry via the sweepstakes entry form before the sweepstakes period ends on May 8, 2026.
4. If you're selected as a winner of one of the 100% discount certification exam vouchers (500 available), you will be contacted by Pearson Vue via email with your voucher code, along with the steps on how to redeem.

The discount certification exam voucher is eligible for one of the three exams below:

- DP-420 Azure Cosmos DB Developer Specialty certification

The official rules are available here for further detail.

How do I participate in the Azure Cosmos DB Conf Skills Challenge Sweepstakes?

To participate, follow the steps above, then submit a sweepstakes entry form by May 8, 2026, for a chance to receive a 100% discount Microsoft Certification voucher. To register for and complete the Challenge, you must have a Microsoft Learn profile.

How do I complete a Microsoft Challenge?

After logging in (or creating) your Microsoft Learn profile and registering for the challenge, go to the leaderboard page and click the button to go to the challenge collection. Complete the listed training content before the challenge ends.

Note: Just completing a challenge does not enter you into the sweepstakes; you must complete a sweepstakes entry form by May 8, 2026, after finishing the challenge to be entered in the drawing.

How can I tell if I've completed a Microsoft Challenge?

Login to your Microsoft Learn profile and go to the challenges home page. Look for the qualifying challenge on the card — it will show a progress bar if content remains, or a checkmark and 'completed' if finished. You can also check the leaderboard page to see a 'where you stand' section with your completion count (e.g., 8/8, 12/12).

Note: Just completing a challenge does not enter you into the sweepstakes; you must complete a sweepstakes entry form by May 8, 2026.

I've completed the Azure Cosmos DB Conf Skills Challenge. Now what?

Once you've completed the challenge, submit an entry via the sweepstakes entry form. You will need to provide: (1) your Microsoft Learn username, (2) the email address for voucher notification, and (3) verification that you've read and consent to the official rules.

Winners will be drawn during one Prize Period ending the week of **May 11, 2026**. Winners will be notified within seven (7) days of each drawing. The voucher is not eligible for GitHub Certification exams.

When are winners drawn for the Azure Cosmos DB Conf Skills Challenge Sweepstakes?

There will be one drawing conducted **during the week of May 11, 2026**. Winners will be notified within seven (7) days of the drawings. Refer to section three (3), 'Entry Periods', of the official rules for full detail.

How long does the Azure Cosmos DB Conf Skills Challenge Sweepstakes run?

The sweepstakes runs until **May 8, 2026, at 11:59 PM UTC (23:59)**.

I am a sweepstakes winner; how long do I have to redeem my prize?

All discount certification exam vouchers must be redeemed by **June 30, 2026**. You must schedule and take your chosen exam by this date. Vouchers cannot be applied to exam dates beyond June 15, 2026.

- DP-420 Azure Cosmos DB Developer Specialty certification

How do I redeem my discount Microsoft Certification exam voucher?

Instructions on how to redeem your voucher will be provided in the notification email from 'MindHub Pro by Pearson VUE' that also contains your voucher code. You can additionally refer to the How to Redeem Your Prize page.

- DP-420 Azure Cosmos DB Developer Specialty certification

Last updated on 04/14/2026

How to Redeem Your Prize Azure Cosmos DB Conf Skills Challenge Sweepstakes

Congratulations on being an Azure Cosmos DB Conf Skills Challenge Sweepstakes winner and receiving a 100% discount certification exam voucher! You will have received an email from **MindHub Pro by Pearson VUE** that contains your voucher code and expiration date.

Note that you **must schedule and take** your chosen exam by **June 15, 2026**. You can review the Azure Cosmos DB Conf Skills Challenge Sweepstakes official rules for the full set of terms and conditions.

The discount certification exam voucher **is eligible** for one of the three exams below:

- DP-420 Azure Cosmos DB Developer Specialty certification

If You Have Not Received an Email from 'MindHub Pro by Pearson Vue'

Validate you've completed these steps:

1. Reviewed the official rules page
2. Registered for and completed the Azure Cosmos DB Conf Skills Challenge prior to May 8, 2026.
3. Completed the sweepstakes entry form.

If you have completed the above steps and have not received an email, you may not have been randomly selected as a winner. Review the Azure Cosmos DB Conf Skills Challenge Sweepstakes official rules and FAQ for more information.

Steps to redeem

1. Select one of the three Microsoft Certification exams that are eligible for usage of the voucher:
   a. DP-420 Azure Cosmos DB Developer Specialty certification

2. Review the exam details, scroll down and click the "Schedule through Pearson Vue" schedule exam button. Some exams may have multiple options; make sure to select the Pearson Vue option.

3. If you are not logged into your Microsoft Learn profile, you will be asked to do so. After doing so, you will be asked to provide additional information for transfer to Pearson Vue. Complete the form and **be sure to provide the same contact email address in which you received your voucher code**.

4. You will be directed to Pearson Vue and prompted to select how you want to take your exam. Options may vary depending on the selected exam. Note: the voucher code you received is **NOT** a "Private Access Code".

   If you select "In person at a test center", proceed to step 5.

   If you select "OnVUE online with OnVUE", proceed to step 6.

5. If you have selected to take the exam in person, you will be prompted to:

   a. Select your preferred exam language.
   b. Agree to Pearson VUE exam terms and Microsoft Certification terms.
   c. Select your preferred testing center. Testing center options will vary based on your location.
   d. Select your preferred exam date and time.
   f. Next, you will be asked to confirm your exam date and contact information. Review and proceed to checkout. It will still display the cost of the exam — this is expected, continue to proceed.
   g. In the next screen, you will see an option for Add Voucher or Promo Code. Enter the voucher code from your MindPro Hub by Pearson VUE email. Click 'Apply', then 'Next' to complete your transaction and schedule your exam!

6. If you have selected to take the exam online (OnVUE), you will be prompted to:

   a. Select your preferred exam language.
   b. Agree to Pearson VUE exam terms and Microsoft Certification terms.
   c. Select your preferred proctor language.
   d. Confirm your preferred time zone, exam date and time.

   Date and time selected must be before June 15, 2026, to use your voucher. If an exam date beyond June 15, 2026, is selected, you will not be able to apply the voucher.

   e. Next, you will be asked to confirm your exam date and contact information. Review and proceed to checkout. It will still display the cost of the exam — this is expected, continue to proceed.
   f. In the next screen, you will see an option for Add Voucher or Promo Code. Enter the

voucher code from your MindPro Hub by Pearson VUE email. Click 'Apply', then 'Next' to complete your transaction and schedule your exam!

If you experience any issues attempting to redeem your voucher, please contact mindhubprohelp@pearson.com.

Microsoft Credentials AI Challenge Sweepstakes official rules

Prove your AI skills. Power your career.

Want to level up your career with real AI skills? Join the Microsoft Credentials AI Challenge from January 20 to March 2, 2026, and explore real-world AI learning that's fast, practical, and impactful.

Register for the Microsoft Credentials AI Challenge, pass one of the new AI Microsoft Applied Skills assessments and complete the sweepstakes entry form between January 20 and March 2, 2026, for a chance to receive a 50% discount Microsoft Certification voucher (below sweepstakes terms and conditions apply).

It's your opportunity to sharpen your skills, stand out, and take the next step forward.

Steps to enter

Complete the following three steps for your chance to be one of the **5,000 winners** to win a voucher for **50%** off a new Microsoft certification exam.

1. Enter one of six Microsoft Credentials AI Challenges by March 2, 2026.
2. Earn one of three AI-focused Microsoft Applied Skills credentials between January 20, 2026 and March 2, 2026:
    - Microsoft Applied Skills: Streamline business workflows with AI chat
    - Microsoft Applied Skills: Generate reports with AI research agents
    - Microsoft Applied Skills: Create agents in Microsoft Copilot Studio
3. Enter the sweepstakes by March 2, 2026, for a chance to win 50% off a new Certification exam via the entry form. Certification vouchers apply to:
    - Microsoft Certified: AI Business Professional (Exam AB-730)
    - Microsoft Certified: AI Transformation Leader ((Exam AB-731))
    - Microsoft 365 Certified: Copilot and Agent Administration Fundamentals (Exam AB-900)
4. If you're selected as a winner of one of the **5,000, 50% discount Certification exam vouchers**, you will be contacted by Pearson Vue via email with your voucher code, along with the steps on how to redeem. Those steps can also be found on the 'How to redeem your prize' page.

After reviewing the official rules, if you have more questions, please consult the FAQ.

Sweepstakes terms and conditions

1. SPONSOR

These Official Rules (“Rules”) govern the operation of the Microsoft Applied Skills Sweepstakes (“Sweepstakes”). Microsoft Corporation, One Microsoft Way, Redmond, WA, 98052, USA, is the Sweepstakes sponsor (“Sponsor”).

2. DEFINITIONS

In these Rules, "Microsoft", "we", "our", and "us" refer to Sponsor and “you” and "yourself" refers to a Sweepstakes participant, or the parent/legal guardian of any Sweepstakes entrant who has not reached the age of majority to contractually obligate themselves in their legal place of residence. By entering you (your parent/legal guardian if you are not the age of majority in your legal place of residence) agree to be bound by these Rules.

3. ENTRY PERIOD

The Sweepstakes starts at 9:00 a.m. Pacific Time (PT) on January 20, 2026, and ends at 11:59 p.m. PT on March 2, 2026 (“Entry Period”) and will consist of the following Prize Periods (each a “Prize Period”).

Expand table

Prize Period	Start Date/Time	End Date/Time
1	January 20, 2026, at 9:00 a.m. PT	February 2, 2026, at 11:59 p.m. PT
2	February 3, 2026, at 12:00 a.m. PT	February 9, 2026, at 11:59 p.m. PT
3	February 10, 2026, at 12:00 a.m. PT	February 16, 2026, at 11: 59 p.m. PT
4	February 17, 2026, at 12:00 a.m. PT	February 23, 2026, at 11: 59 p.m. PT
5	February 24, 2026, at 12:00 a.m. PT	March 2, 2026, at 11: 59 p.m. PT

Entries will be eligible for the Prize period in which they are received, and non-winning entries will be carried over to subsequent Prize Periods. Entrants only need to enter once to be included for all future prize periods, as non-winning entries are carried over to subsequent drawings.

4. ELIGIBILITY

To enter, you must be 18 years of age or older. If you are 18 years of age or older but have not reached the age of majority in your legal place of residence, then you must have consent of a parent/legal guardian.

Employees and directors of Microsoft Corporation and its subsidiaries, affiliates, advertising agencies, and Sweepstakes Parties are not eligible, nor are persons involved in the execution or administration of this promotion, or the family members of each above (parents, children, siblings, spouse/domestic partners, or individuals residing in the same household). Void in Cuba, Iran, North Korea, Sudan, Syria, Region of Crimea, Russia, and where prohibited.

5. HOW TO ENTER

No Purchase Necessary. To enter, you must complete all of the following requirements:

1. Participate in any of the following challenges (each a "Challenge"):

    - Applied Skills Challenge: Transform your organization
    - Applied Skills Challenge: Reimagine everyday business processes with agents
    - Applied Skills Challenge: Create custom agents
    - Certification Challenge: Transform your organization
    - Certification Challenge: Reimagine business outcomes
    - Certification Challenge: Enable and manage AI at your workplace

You do not need to complete a Challenge, but you must register for and start a Challenge.

2. Earn any of the following free Microsoft Applied Skills (each an "Applied Skill") during the timeframe for the chosen Challenge:

    - Microsoft Applied Skills: Streamline business workflows with AI chat
    - Microsoft Applied Skills: Generate reports with AI research agents
    - Microsoft Applied Skills: Create agents in Microsoft Copilot Studio

3. After participating in an eligible Challenge and earning an eligible Applied Skills credential, visit and complete https://aka.ms/AIChallengeEntry to submit your entry. All required fields must be completed to receive an entry.

For doing this, you will receive one (1) entry into the corresponding weekly Prize Period drawing. There is a limit of one (1) entry per person overall.

If you would like to be removed from the Microsoft Applied Skills sweepstakes and have your personal data deleted, please email us at sweepstakesupport@microsoft.com. This request must be sent from the email address you provided at registration. We will delete your personal data within seven (7) business days. This action is limited to this contest and will have no impact on other Microsoft applications. Please see the Microsoft Privacy Statement for information on broader privacy requests.

Any attempt by you to obtain more than the stated number of entries by using multiple/different accounts, identities, registrations, logins, or any other methods will void your entries, and you may be disqualified. Use of any automated system to participate is prohibited.

We are not responsible for excess, lost, late, or incomplete entries. If disputed, entries will be deemed submitted by the "authorized account holder" of the email address, social media account, or other method used to enter. The "authorized account holder" is the natural person assigned to an email address by an internet or online service provider, or other organization responsible for assigning email addresses.

6. WINNER SELECTION AND NOTIFICATION

Pending confirmation of eligibility, potential prize winners will be selected within seven (7) days following each Prize Period by Microsoft or their Agent in a random drawing from among all eligible entries.

Winner email addresses will be shared with Pearson Vue for voucher fulfillment. Vouchers are issued by MindHub Pro by Pearson VUE (privacy statement available here). Winners will receive an email from 'MindhubPro by Pearson VUE' with a digital code to download their prize. If a selected winner cannot be contacted, is ineligible, or fails to claim a prize, the selected winner will forfeit their prize and an alternate winner will be selected time allowing. If you are a potential winner and you are 18 or older but have not reached the age of majority in your legal place of residence, we may require your parent/legal guardian to sign all required forms on your behalf. Only three alternate winners will be selected, after which unclaimed prizes will remain unawarded.

7. PRIZES

The following prizes will be awarded:

Five Thousand (5,000) Grand Prizes. Each winner will receive a 50% discount exam voucher. Approximate Retail Value (ARV) $0.00.

50% discount exam voucher **is eligible** for the following Microsoft Certification exams offered through Pearson Vue:

- Microsoft Certified: AI Business Professional (Exam AB-730)
- Microsoft Certified: AI Transformation Leader (Exam AB-731)
- Microsoft 365 Certified: Copilot and Agent Administration Fundamentals (Exam AB-900)

Certification codes expire on **June 30, 2026**, so exam(s) **must be booked and completed before this date**.

The total Approximate Retail Value (ARV) of all prizes: **$0.00**.

We will only award one (1) prize per person overall. No more than the stated number of prizes will be awarded. No substitution, transfer, or assignment of prize permitted, except that Microsoft reserves the right to substitute a prize of equal or greater value in the event the offered prize is unavailable. Microsoft products awarded as prizes are awarded "AS IS" and

WITHOUT WARRANTY OF ANY KIND, express or implied (including any implied warranty of merchantability or fitness for a particular purpose); you assume the entire risk of quality and performance, and should the prizes prove defective, you assume the entire cost of all necessary servicing or repair. This is so even if the Microsoft product mentions a warranty on its packaging, in a manual, or in marketing materials; no warranty applies to Microsoft products awarded as prizes.

Microsoft does not give any warranty of any kind, express or implied (including any implied warranty of merchantability or fitness for a particular purpose) on products made by a company other than Microsoft that are awarded as prizes. Please contact the manufacturer to see if it is covered by that company's warranty.

Prizes will be sent no later than 7 days after winner selection. Taxes on the prize, if any, are the sole responsibility of the winner, who is advised to seek independent counsel regarding the tax implications of accepting a prize. By accepting a prize, you agree that Microsoft may use your entry, name, image and hometown online and in print, or in any other media, in connection with this Sweepstakes without payment or compensation to you, except where prohibited by law.

8. ODDS

The odds of winning are based on the number of eligible entries received.

9. GENERAL CONDITIONS AND RELEASE OF LIABILITY

To the extent allowed by law, by entering you agree to release and hold harmless Microsoft and its respective parents, partners, subsidiaries, affiliates, employees, and agents from any and all liability or any injury, loss, or damage of any kind arising in connection with this Sweepstakes or any prize won.

All local laws apply. The decisions of Microsoft are final and binding.

We reserve the right to cancel, change, or suspend this Sweepstakes for any reason, including cheating, technology failure, catastrophe, war, or any other unforeseen or unexpected event that affects the integrity of this Sweepstakes, whether human or mechanical. If the integrity of the Sweepstakes cannot be restored, we may select winners from among all eligible entries received before we have to cancel, change or suspend the Sweepstakes.

If you attempt or we have strong reason to believe that you have compromised the integrity or the legitimate operation of this Sweepstakes by cheating, hacking, creating a bot or other automated program, or by committing fraud in any way, we may seek damages from you to the full extent of the law and you may be banned from participation in future Microsoft promotions.

10. USE OF YOUR ENTRY

Personal data you provide while entering this Sweepstakes will be used by Microsoft and/or its agents and prize fulfillers acting on Microsoft's behalf only for the administration and operation of this Sweepstakes and in accordance with the Microsoft Privacy Statement.

11. GOVERNING LAW

This Sweepstakes will be governed by the laws of the State of Washington, and you consent to the exclusive jurisdiction and venue of the courts of the State of Washington for any disputes arising out of this Sweepstakes.

12. WINNERS LIST

Send an email to sweepstakesupport@microsoft.com with the subject line "Microsoft Certifications AI Challenge Sweepstakes winners" within 30 days of March 2, 2026 to receive a link to a list of winners.

Microsoft Credentials AI Challenge Sweepstakes Frequently asked questions

Prove your AI skills. Power your career.

Join the Microsoft Credentials AI Challenge from January 20 to March 2, 2026, and explore real-world AI learning that's fast, practical, and impactful.

Register for the Microsoft Credentials AI Challenge, pass one of the new AI Microsoft Applied Skills assessments and complete the sweepstakes entry form between January 20 and March 2, 2026, for a chance to receive a 50% discount Microsoft Certification voucher (below sweepstakes terms and conditions apply).

It's your opportunity to sharpen your skills, stand out, and take the next step forward.

How do I participate in the Microsoft Credentials AI Challenge sweepstakes?

To participate in the Microsoft Credentials AI Challenge sweepstakes, you must register for a Microsoft Credentials AI Challenge, complete and pass a qualifying Microsoft Applied Skills credential, and submit a sweepstakes entry form within the sweepstakes timeframe of January 20 to March 2, 2026, for a chance to receive a 50% discount Microsoft Certification voucher (sweepstakes terms and conditions apply).

Steps to enter

Complete the following three steps for your chance to be one of the **5,000 winners** to win a voucher for **50% off** a new Microsoft certification exam.

1. Register for and start one of six Microsoft Credentials AI Challenges by March 2, 2026.
2. Earn one of three new, free, AI-focused Microsoft Applied Skills credentials between January 20, 2026, and March 2, 2026.
    - Microsoft Applied Skill: Streamline business workflows with AI chat
    - Microsoft Applied Skill: Generate reports with AI research agents
    - Microsoft Applied Skill: Create agents in Microsoft Copilot Studio
3. Enter the sweepstakes by March 2, 2026, for a chance to win 50% off a new certification exam via the entry form. Vouchers apply to:
    - Microsoft Certified: AI Business Professional (Exam AB-730)
    - Microsoft Certified: AI Transformation Leader (Exam AB-731)

- Microsoft 365 Certified: Copilot and Agent Administration Fundamentals (Exam AB-900)

4. If you're selected as a winner of one of the **5,000, 50% discount certification exam vouchers**, you will be contacted by Pearson Vue via email with your voucher code, along with the steps on how to redeem. Those steps can also be found on the 'How to redeem your prize' page.

How do I earn a Microsoft Applied Skills credential?

To earn a Microsoft Applied Skills credential, you must have a Microsoft Learn profile. If you do not currently have one that is okay, you can create a free account as you take your Microsoft Applied Skills assessment.

How it works

1. Prepare—Learn at your pace with self-paced learning or instructor-led training taught by Microsoft certified trainers
2. Earn—Complete and pass the assessment to earn your Microsoft-verified credential.
3. Share—Celebrate your new skills by sharing your credential on LinkedIn and other social platforms.

Go to the Microsoft Applied Skills assessments homepage to learn more.

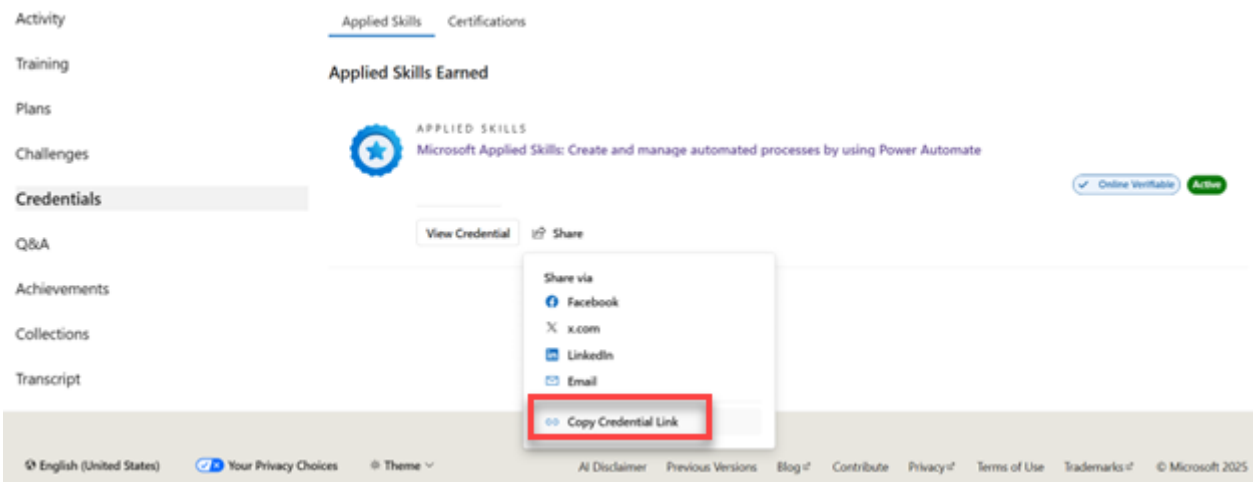
How can I tell if I've earned a Microsoft Applied Skills credential?

Within your Microsoft Learn profile, go to the Credentials section. Once there, your Microsoft Applied Skills credentials will display under the Applied Skills tab. Make sure the credential was earned in the sweepstakes timeframe of January 20, 2026 (9:00 AM PT) – March 2, 2026 (11:59 PM PT).

I've earned my Microsoft Applied Skills credential. Now what?

Once you have earned your Microsoft Applied Skills credential, you can submit an entry for the sweepstakes to earn a 50% discount exam voucher by completing the sweepstakes entry form.

To complete the submission, you will need to provide; (1) your Microsoft Learn **username** (which can be validated here), (2) the email address you would like the discount voucher code sent to in the event you are a winner, and (3) the Credential Link of the Microsoft Applied Skills credential that you earned, which can be found in your profile under the Credentials tab when clicking "Share" on the credential (screenshot example below).



Winners will be drawn weekly starting on February 4, 2026, with the final drawing on March 4, 2026. Winners will be notified within seven (7) days of the drawing if they have been selected. The discount certification exam voucher **is eligible** for the following Microsoft Certification exams:

- Microsoft Certified: AI Business Professional (Exam AB-730)
- Microsoft Certified: AI Transformation Leader (Exam AB-731)
- Microsoft 365 Certified: Copilot and Agent Administration Fundamentals (Exam AB-900)

To see the complete rules of the sweepstakes, which includes the prize drawing schedule, review the official rules page.

When are winners drawn for the Microsoft Credentials AI Challenge sweepstakes?

There will be weekly drawings starting February 4, 2026, with the final drawing on March 4, 2026. Winners will be notified within seven (7) days of the entry periods. Please refer to section three (3), 'Entry Periods', of the Microsoft Credentials AI Challenge sweepstakes official rules.

How will I be notified if I am a winner of a Microsoft Credentials AI Challenge sweepstakes drawing?

Winners will be notified via an email sent to the email address they provided in their Microsoft Credentials AI Challenge sweepstakes form submission.

The email will be from 'MindHub Pro by Pearson VUE' and will contain the 50% discount certification exam voucher won along with the expiration date and steps on how to redeem.

Emails will be sent within seven (7) days of the applicable Prize Period drawing.

Refer to section six (6), 'Winner selection and notification', of the Microsoft Credentials AI Challenge sweepstakes official rules for a full breakdown.

How long does the Microsoft Credentials AI Challenge sweepstakes run?

The Sweepstakes starts at 9:00 a.m. Pacific Time (PT) on January 20, 2026, and ends at 11:59 p.m. PT on March 2, 2026.

I am a sweepstakes winner; how long do I have to redeem my prize?

All Microsoft Credentials AI Challenge sweepstakes discount certification exam vouchers must be redeemed by **June 30, 2026**.

This means you **must schedule and take** your chosen exam by **June 30, 2026**.

When using your voucher, you will **not** be able to use it for an exam date attempting to be scheduled for beyond **June 30, 2026**.

How do I redeem my discount Microsoft Certification exam voucher?

Instructions on how to redeem your voucher will be provided in the notification email you received from 'MindHub Pro by Pearson VUE' that also contained your voucher code. You can additionally refer to the 'How to redeem your prize' page.

The discount certification exam voucher **is eligible** for the following Microsoft Certification exams:

- Microsoft Certified: AI Business Professional (Exam AB-730)
- Microsoft Certified: AI Transformation Leader (Exam AB-731)
- Microsoft 365 Certified: Copilot and Agent Administration Fundamentals (Exam AB-900)

For the full list of rules, please refer to the Microsoft Credentials AI Challenge sweepstakes official rules.

How do I join a Challenge?

Select the Microsoft Credentials AI Challenge you want to participate in and register by selecting "Join the Challenge" once it starts. You will use your Microsoft Learn profile to register.

If you don't have a Learn profile, that is okay. You can create one as you register.

How do I complete the Challenge?

To complete the Challenge, you'll need to finish the designated collection of Microsoft Learn content before the Challenge ends.

How can I tell if I've completed the Challenge?

The 'where you stand' section will display a fraction that indicates your current progress (e.g. 1/8 or 2/20). The Challenge is complete once the fraction displayed equals 100% (e.g. 8/8 or 20/20).

Do modules I've completed before the Challenge started count towards my score?

Yes, any modules in the collection that you've completed before the Challenge started will count towards your score.

How is the leaderboard calculated?

The leaderboard shows how many modules you have completed out of the total number of modules in the collection. The results are organized by the order of completion.

Will I receive a badge?

Yes! Badges will be available in your Microsoft Learn profile when you complete a Challenge.

What if the leaderboard is not reflecting my progress?

Make sure you are logged in when completing your modules. The leaderboard and 'where you stand' sections may take a few hours to refresh.

How can I see all my active and past Challenges?

To view your Challenge activity from the past 30 days, please visit your Microsoft Learn profile. To see all your Challenges, go to the Challenges home page.

What should I do if I'm having an issue with a sandbox, knowledge check or loading/completing a module page?

For all issues with Microsoft Learn modules, please report your feedback on the Microsoft Learn troubleshooting page.

How to redeem your Microsoft Credentials AI Challenge Sweepstakes prize

Congratulations on being a Microsoft Credentials AI Challenge Sweepstakes winner and receiving a 50% discount certification exam voucher! You will have received an email from 'MindHub Pro by Pearson VUE' that contains your voucher code and expiration date.

Note that you **must schedule and take** your chosen exam by **June 30, 2026**. You can review the Microsoft Credentials AI Challenge Sweepstakes official rules for the full set terms and conditions.

The discount certification exam voucher **is eligible** for the following Microsoft Certification exams:

- Microsoft Certified: AI Business Professional (Exam AB-730)
- Microsoft Certified: AI Transformation Leader (Exam AB-731)
- Microsoft 365 Certified: Copilot and Agent Administration Fundamentals (Exam AB-900)

If you have not received an email from 'MindHub Pro by Pearson Vue', validate you've completed these steps.

1. Review the sweepstakes terms and conditions on this page.
2. Register for and start one of six Microsoft Credentials AI Challenges by March 2, 2026.
3. Earn one of three AI-focused Microsoft Applied Skills between January 20, 2026 and March 2, 2026:
    - Microsoft Applied Skill: Streamline business workflows with AI chat
    - Microsoft Applied Skill: Generate reports with AI research agents
    - Microsoft Applied Skill: Create agents in Microsoft Copilot Studio
4. Complete the sweepstakes entry form by March 2, 2026

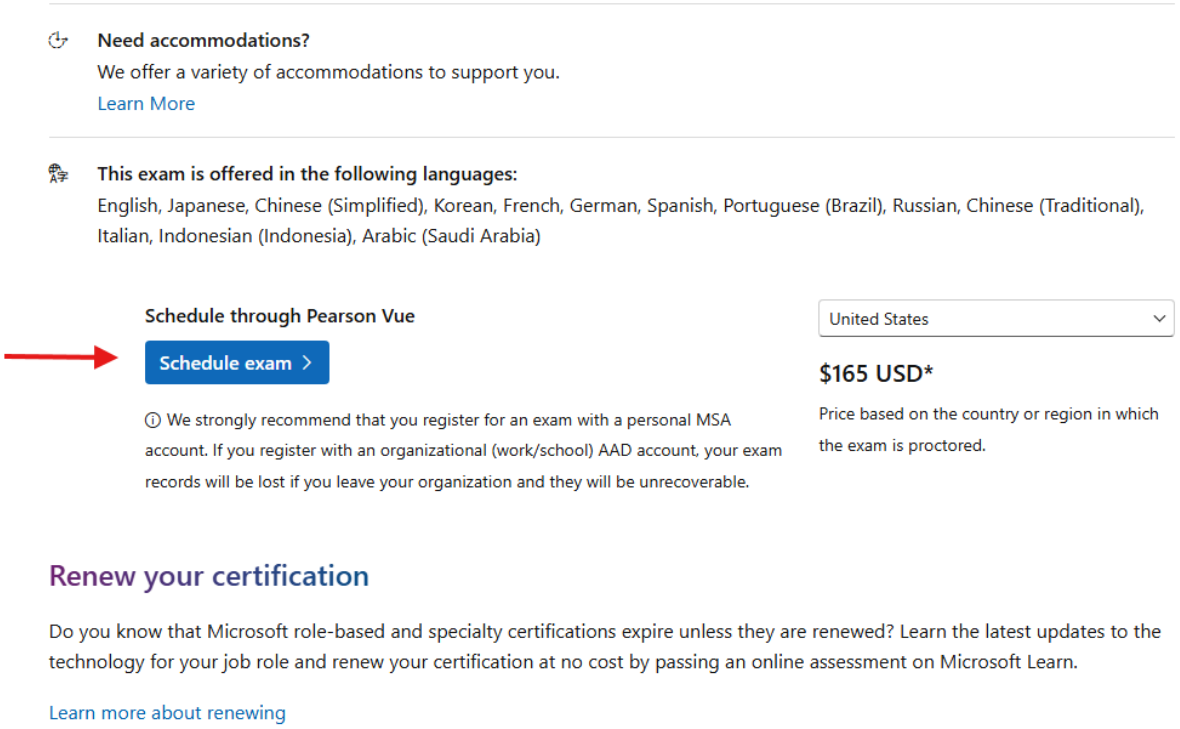
If you have completed the above steps, you may not have been randomly selected as a winner. Review the Microsoft Credentials AI Challenge sweepstakes official rules and FAQ for more information.

Steps to redeem

1. Select one of the **eligible** Microsoft Certification exams after they are released as general availability (GA) in late January:
    - Microsoft Certified: AI Business Professional (Exam AB-730)
    - Microsoft Certified: AI Transformation Leader (Exam AB-731)

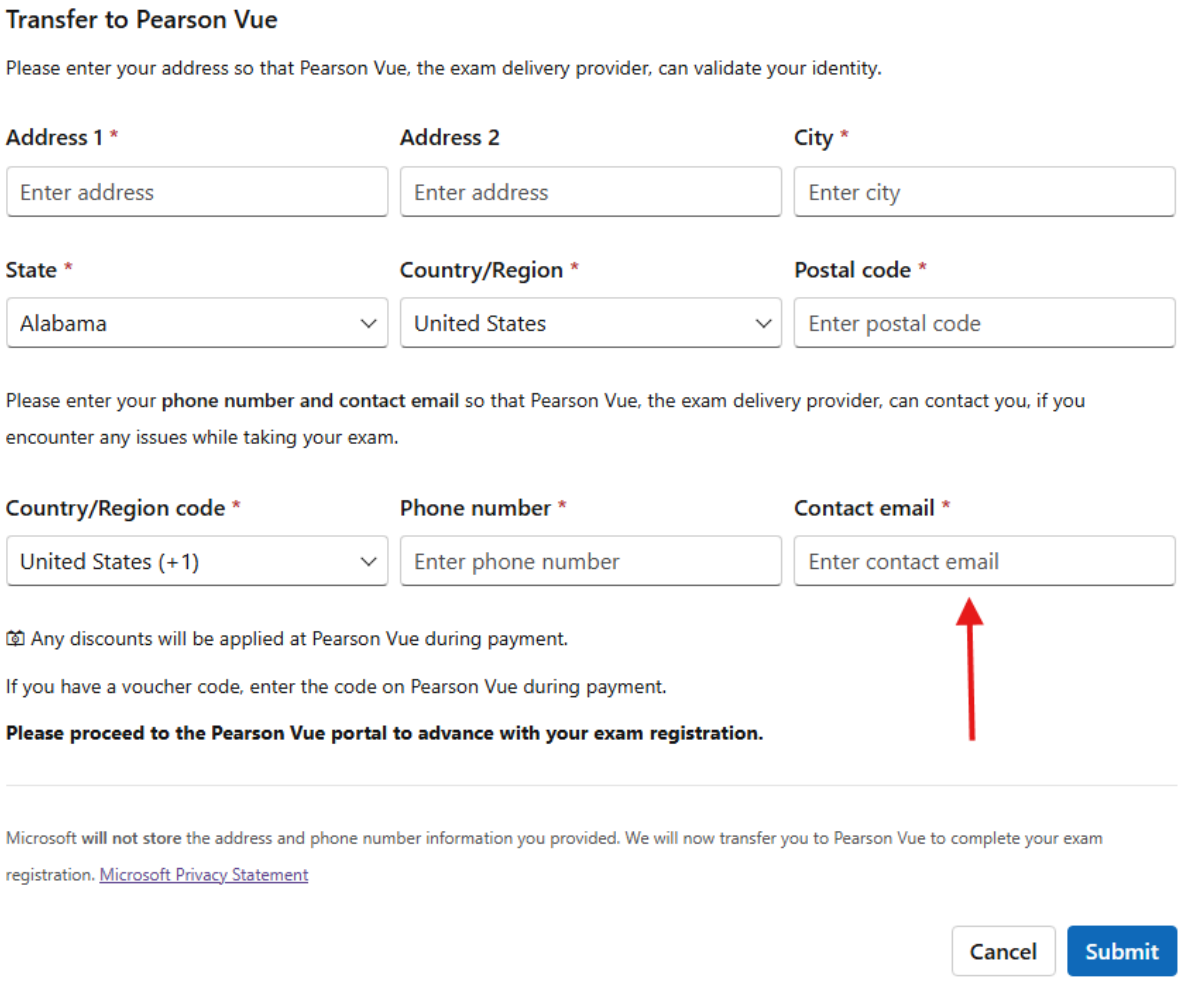
- Microsoft 365 Certified: Copilot and Agent Administration Fundamentals (Exam AB-900)

2. Review the exam details, scroll down and click the “Schedule through Pearson Vue” schedule exam button. Some exams may have two options, make sure to select the Pearson Vue option.

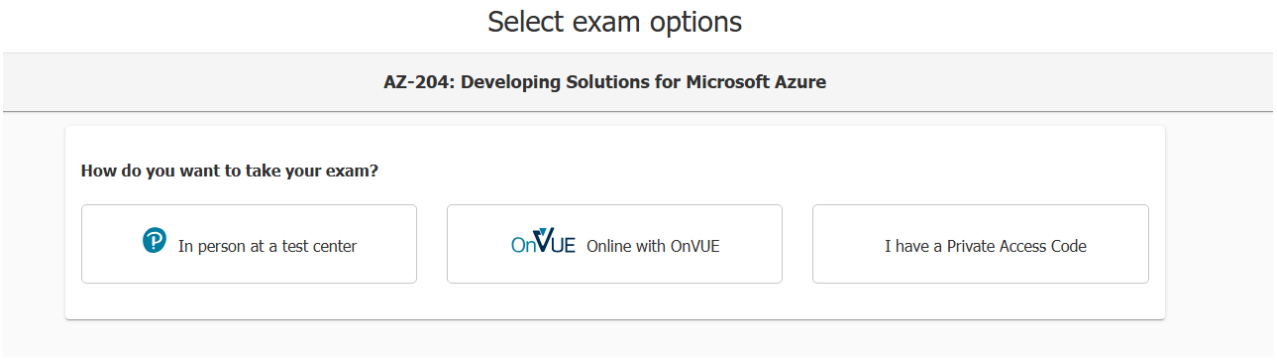


3. If you are not logged in to your Microsoft Learn profile, you will be asked to do so at this point. After doing so, you will be asked to provide additional information for transfer to Pearson Vue. Complete the form and **be sure to provide the same contact email address**

in which you received your voucher code.



4. You will be directed to Pearson Vue and prompted to select how you want to take your exam. Options may vary depending on which exam you have selected. Choose your preference and continue, noting that the voucher code you received **is not** a "Private Access Code".



If you select "In person at a test center", **proceed to step 5**.

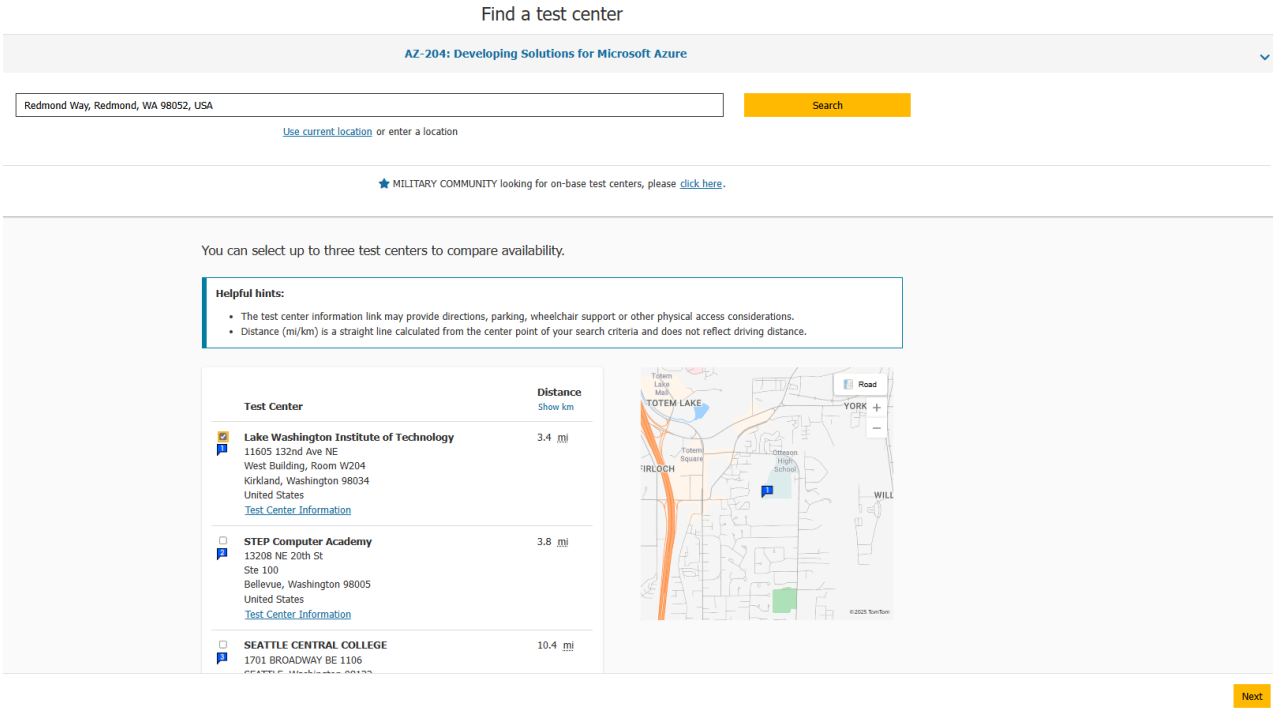
If you select "OnVUE online with OnVUE", **proceed to step 6**.

5. If you have selected to take the exam in person, you will next be prompted to:

a. Select your preferred exam language. Languages provided vary based on exam selected.

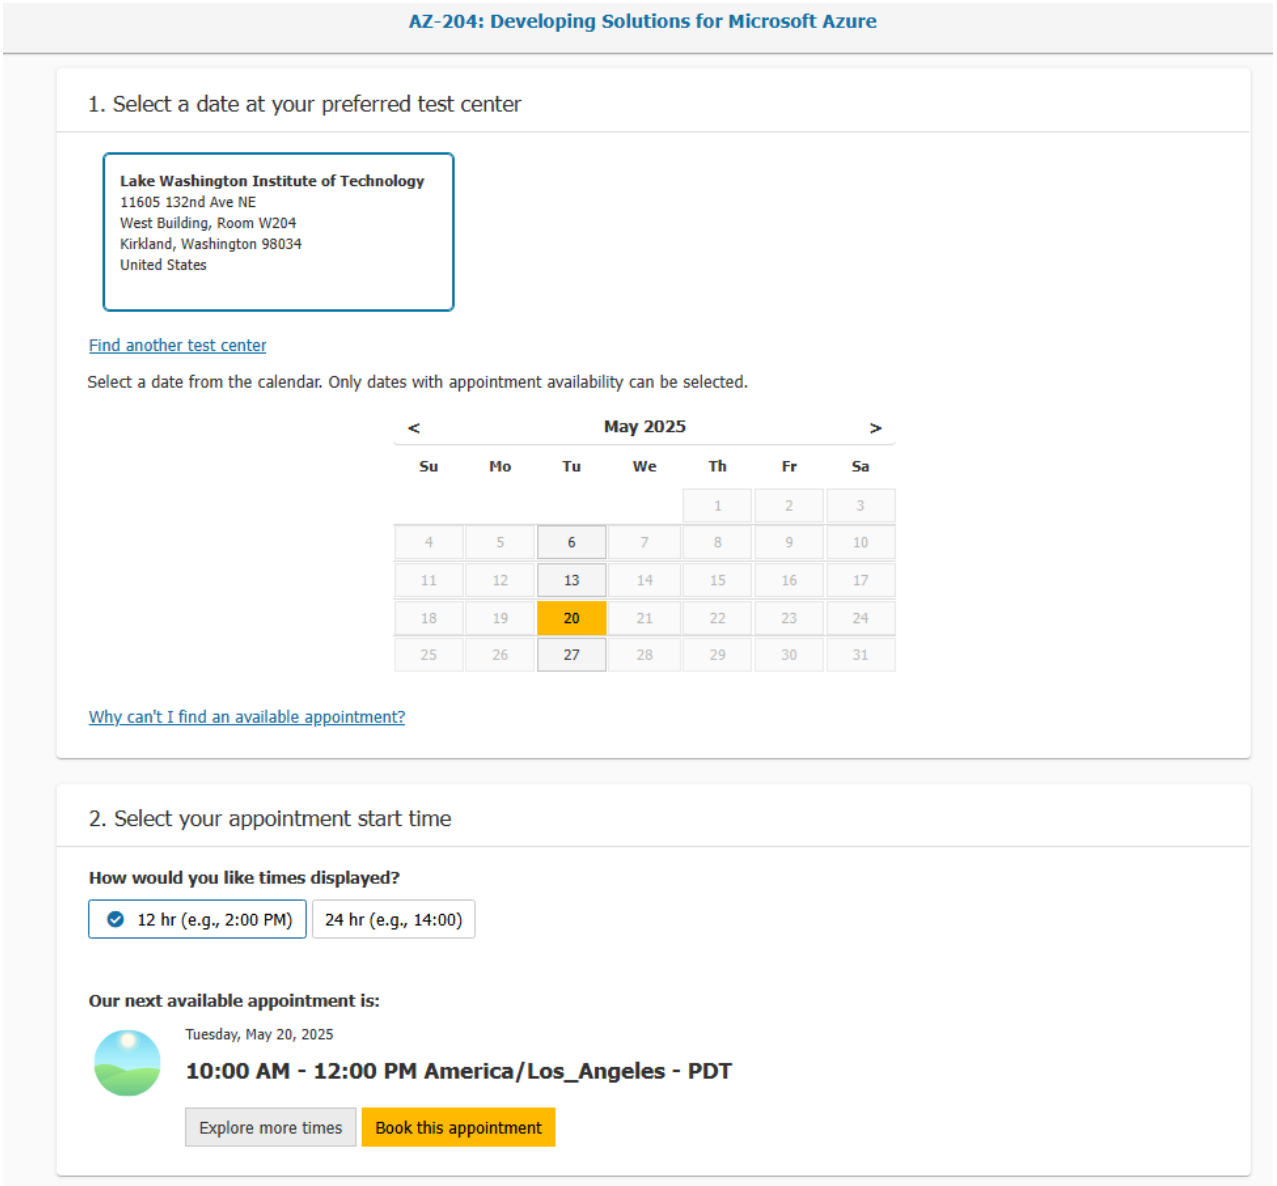
b. Agree to Pearson VUE exam terms and Microsoft Certification terms.

c. Select your preferred testing center.



Testing center options will vary based on your location.

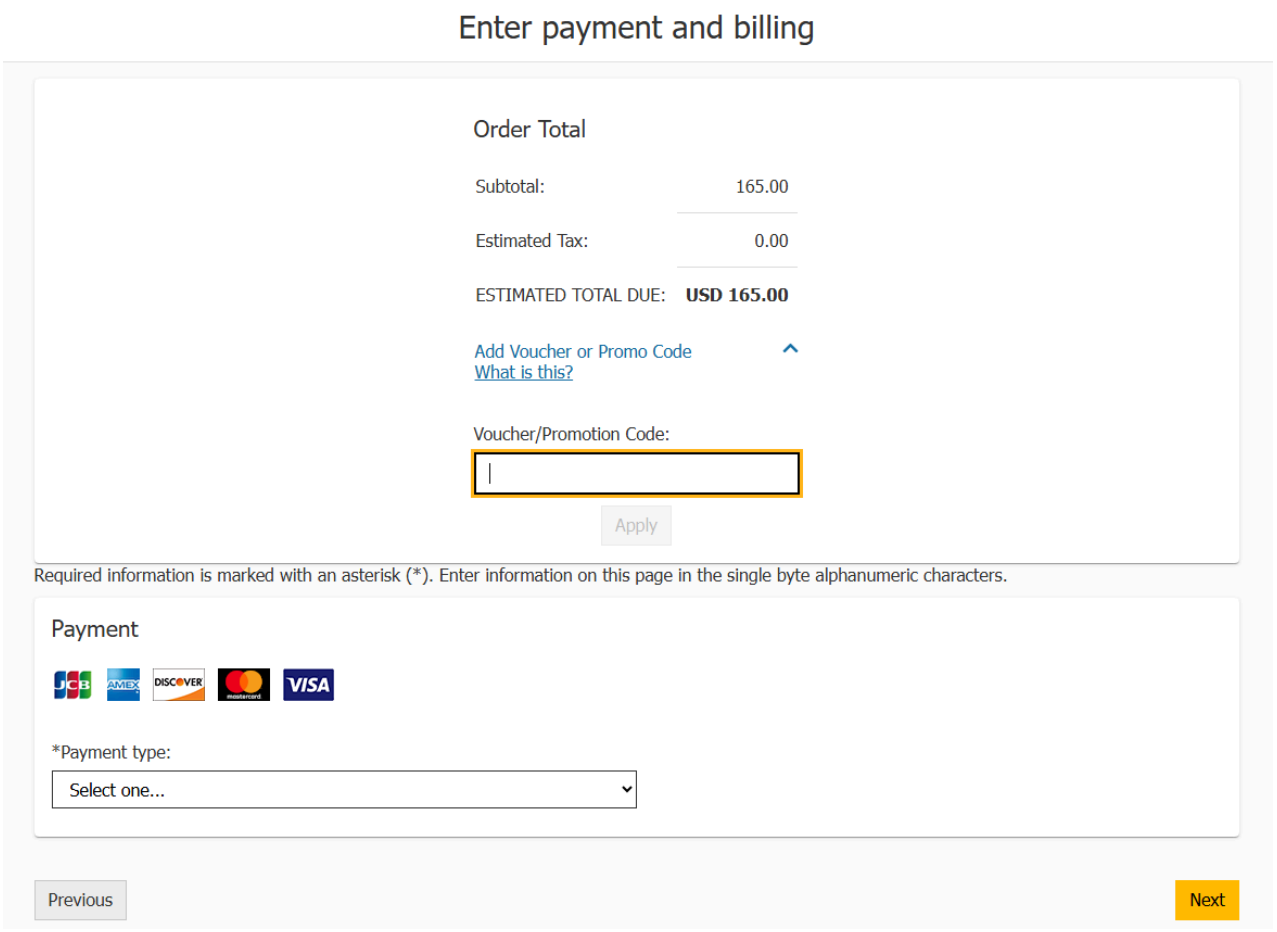
d. Select your preferred exam date and time.



Date and time selected must be before June 30, 2026, to use your voucher. If an exam date beyond June 30, 2026 is selected, you will not be able to apply, the voucher to the cost of the exam.

e. Next you will be asked to confirm your exam scheduled date and contact information. Review and proceed to checkout. **It will still display the cost of the exam—this is expected**, continue to proceed to checkout.

f. In the next screen, you will see an option for Add Voucher or Promo Code. Enter the voucher code you received via email from 'MindPro Hub by Pearson VUE'.

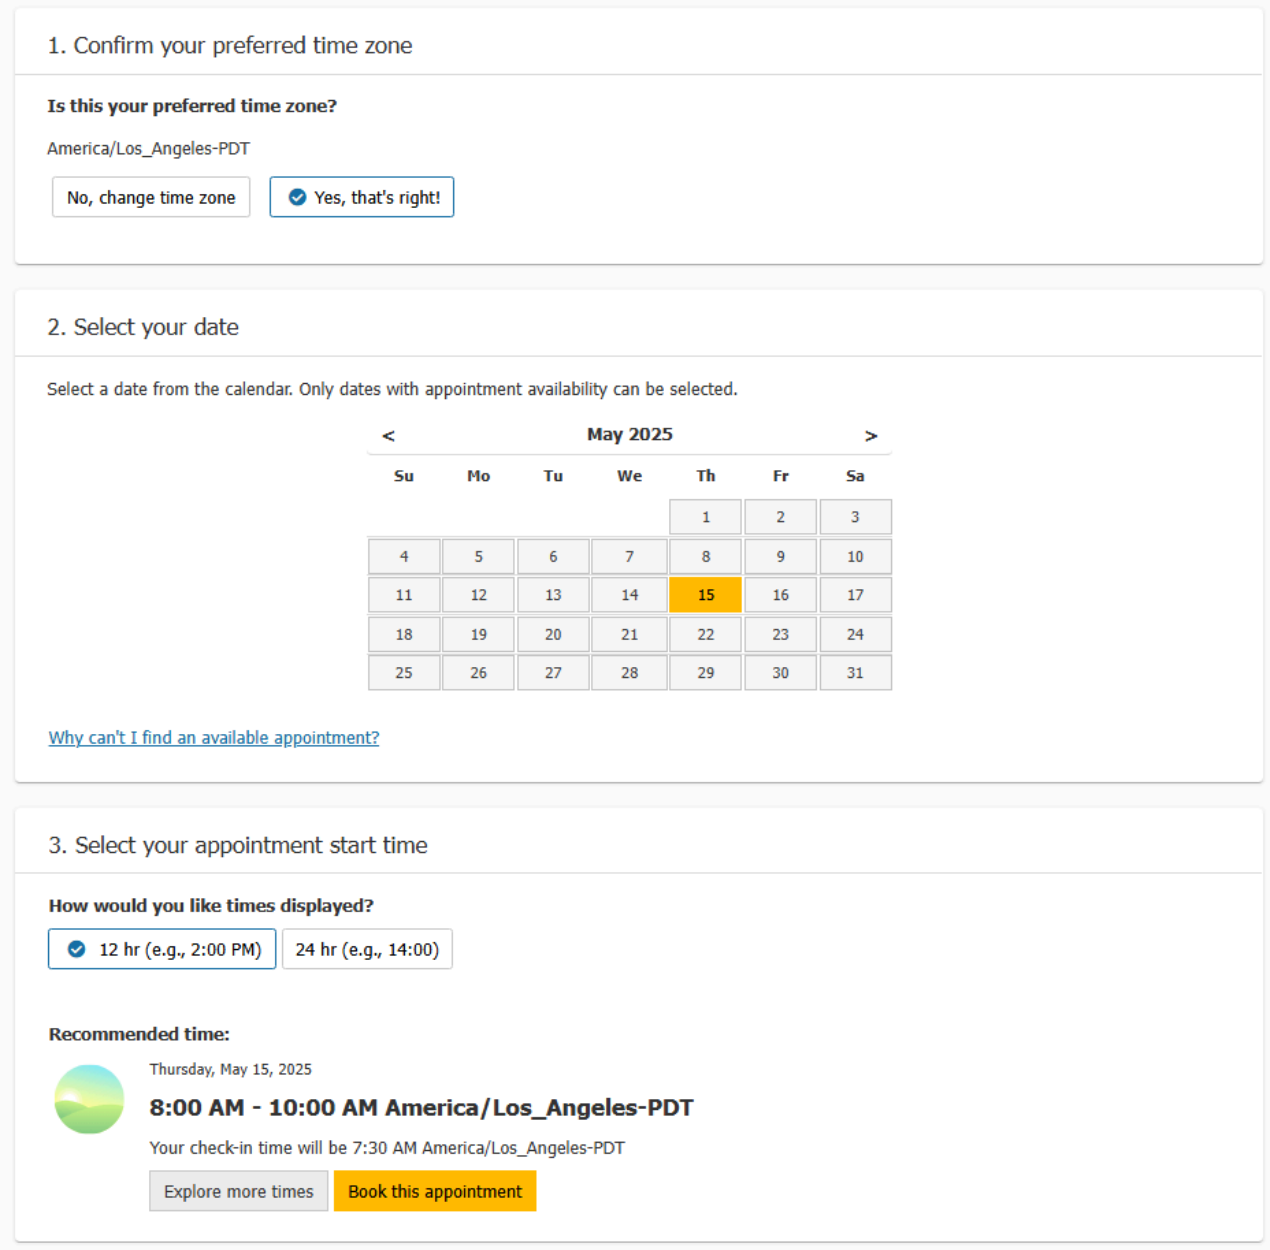


After entering the code, click ‘Apply’ to have it applied to the order, then select ‘Next’ to complete your transaction and schedule your exam!

If you experience any issues attempting to redeem your voucher, please contact mindhubprohelp@pearson.com.

6. If you have selected to take the exam online, you will next be prompted to:

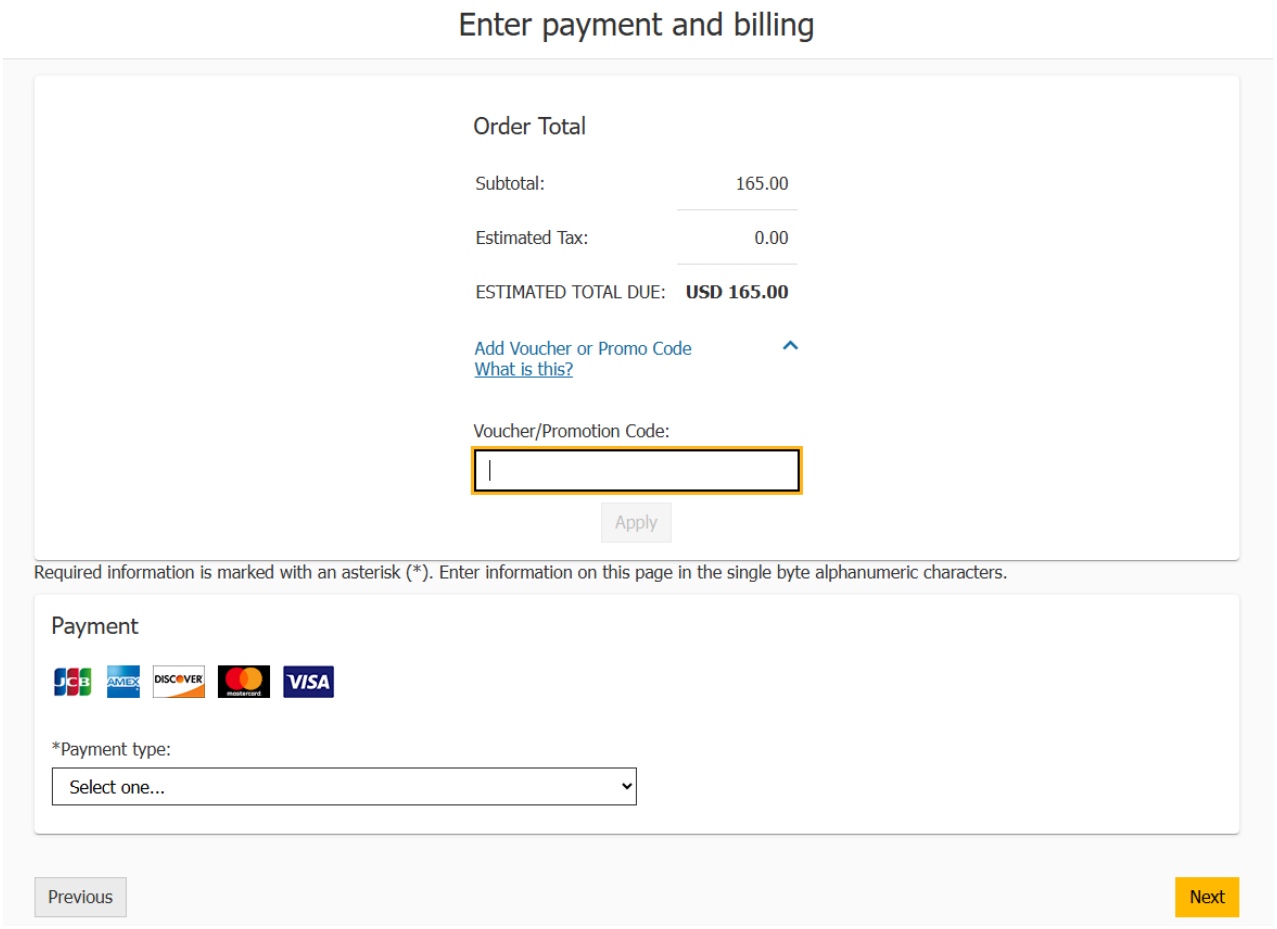
a. Select your preferred exam language. Languages provided vary based on the exam selected.
b. Agree to Pearson VUE exam terms and Microsoft Certification terms.
c. Select your preferred proctor language. Language availability will vary based on exam selection.
d. Confirm your preferred time zone (will default to browser setting), exam date and time.



Date and time selected must be before June 30, 2026 to use your voucher. If an exam date beyond June 30, 2026 is selected, you will not be able to apply the voucher to the cost of the exam.

e. Next you will be asked to confirm your exam scheduled date and contact information. Review and proceed to checkout. **It will still display the cost of the exam—this is expected**, continue to proceed to checkout.

f. In the next screen, you will see an option for Add Voucher or Promo Code. Enter the voucher code you received via email from 'MindPro Hub by Pearson VUE'.



After entering the code, click ‘Apply’ to have it applied to the order, then select ‘Next’ to complete your transaction and schedule your exam!

If you experience any issues attempting to redeem your voucher, please contact mindhubprohelp@pearson.com.
